

EVS Media Importer

EVS Media Importer is a plug-in option tool from EVS directly integrated in Final Cut Pro interface allowing to search clips and media available on the EVS XT[2] server and import them in a flash onto the timeline editor.

Key features

- Manage file import from the XT[2] server into Final Cut Pro
- Direct access to clips
- Native ProRes 422 and MPEG-IMX support (no transcoding)
- Intuitive thumbnail and list views
- Search tool based on metadata
- Edit-while-import for maximum speed
- Multiple XT[2] servers support

Main capabilities :

■ Direct access from Final Cut Pro menu

EVS Media Importer is a new EVS plug-in application directly accessible from any Apple Final Cut Pro Studio File/Import menu.

■ Direct clips import

The tool allows the Final Cut Pro editor to initiate the import of clips from the XT[2] production server and reference them in the current project bin.

■ Intuitive thumbnail interface and search tools

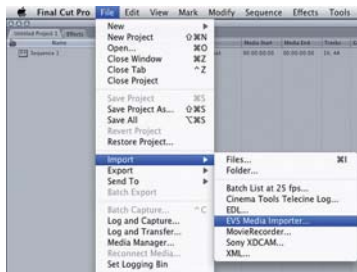

XT[2] clips can be located easily via an intuitive thumbnail interface, or searched by EVS-generated keywords. The search tool are based on metadata associated to the clips created on the XT[2] server.

■ Instant availability of the media

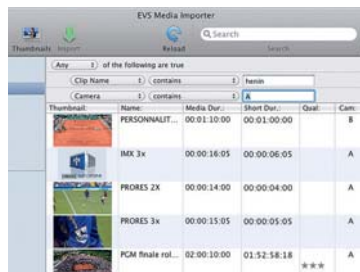

Selected content is imported into the current Final Cut Pro project bin with a simple double-click action. Clips are imported as either QuickTime or QuickTime Reference movies, allowing the media to be instantly available for editing during the transfer process.

■ No transcoding

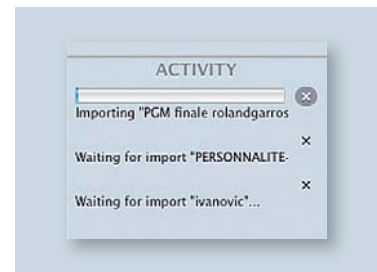

As a result of the XT[2]'s native support of the new ProRes 422 and ProRes 422HQ codecs, HD clips and media can be imported without transcoding.
