CAUTION

Changes or modifications to this product not expressly approved by Grandstream, or operation of this product in any way other than as detailed by this User Manual, could void your manufacturer warranty.

WARNING

Please do not use a different power adaptor with your devices as it may cause damage to the products and void the manufacturer warranty.

DOCUMENT PURPOSE

This document describes UCM6100 series specifications, features and will help you to configure your system via Web GUI menu to fully manipulate the supported features.

The intended audiences of this document are device administrators. To learn more about UCM6100 series features, please visit <u>http://www.grandstream.com/support</u> to download available how-to guides.

This guide covers following main topics:

- Product overview
- Installation
- Getting started
- <u>System settings</u>
- Provisioning
- Extensions
- Extension groups
- <u>Analog Trunks</u>
- VolP Trunks
- <u>SLA station</u>
- <u>Call routes</u>
- Conference room.
- <u>Conference schedule</u>
- <u>IVR</u>
- Language settings for voice prompt
- Voicemail
- Ring group
- Paging and intercom group
- <u>Call queue</u>
- Pickup groups
- PIN Groups
- <u>Music on hold</u>
- Fax Server

- Busy camp-on
- Presence
- Follow me
- Speed Dial
- <u>DISA</u>
- <u>Callback</u>
- BLF and event list
- Dial by name
- <u>Active calls and monitor</u>
- <u>Call features</u>
- <u>Call recording</u>
- <u>CTI Server</u>
- Asterisk manager interface (AMI)
- <u>CRM integration</u>
- PMS integration
- Wakeup service
- Announcements center
- Status and reporting
- CDR (Call Details Record)
- <u>User Portal</u>
- Upgrading and maintenance
- Backup/restore
- Troubleshooting

CHANGE LOG

This section documents significant changes from previous versions of the UCM6100 user manuals. Only major new features or major document updates are listed here. Minor updates for corrections or editing are not documented here.

Firmware Version 1.0.18.13

• No major changes.

Firmware Version 1.0.18.12

- CDR API configuration page moved from CDR to Value-Added Features.
- Added ability to upload voice prompt files via API. [Upload Voice Prompt via API]

Firmware Version 1.0.18.9

- Added new AMI commands. [ASTERISK MANAGER INTERFACE (RESTRICTED ACCESS)]
- Added ability to customize the data columns included in exported CDR reports. [CDR Export Customization]
- Added ability to view a specified extension's membership in Call Queues/Ring Groups and other details. [Extension Details]
- Added ability to disable audio files for Music on Hold. [MUSIC ON HOLD]
- Added Timeout Destination and Ring-All Callback on Timeout options to Parking Lot page. [Parking Lot]
- Added inbound rule importing/exporting functionality. [Inbound Route: Import/Export Inbound Route]

Firmware Version 1.0.17.16

- Added RTX codec support. [Technical Specifications][Codec Preference]
- Emergency calls will no longer be logged into CRM servers. [CRM]
- Added batch extension resetting functionality. [Batch Extension Resetting Functionality]
- Added FAX Resend Support. [Enable Fax Resend] [Max Resend Attempts]
- Fail2ban now supports up to 20 whitelist entries. [Fail2Ban Whitelist]
- Added FXO Frequency Tolerance option to Analog Hardware page. [FXO Frequency Tolerance]
- Added NAS support for call recording backup. [NAS Settings]
- Added paging/intercom scheduling functionality. [Configure a Scheduled Paging / Intercom]
- Added Multicast Paging support. [Paging and Intercom Group]
- Added Failover Destination under call parking options. [Failover Destination]
- Added Timeout Callback Ringing All options under call parking options. [Ring All Callback on Timeout]
- Added ability to view CID of parked calls on VPKs/MPKs configured as monitored call park. [Monitor Call Park CID Name Information (GXP21xx Phones Only)]

- Added support for endpoint call forwarding under ring group. [Endpoint Call Forwarding Support]
- Added batch operations and searching functionality to the Inbound/Outbound Blacklist pages. Operations include deleting rules and importing/exporting entire blacklists. [Outbound Blacklist][Blacklist Configurations]
- Added ability to monitor and toggle inbound routing modes via BLF. [Inbound Mode BLF Monitoring]
- Added Shared Call Appearance functionality. [Shared Call Appearance]
- Added Forward HOLD Requests option under Misc page. [Forward HOLD Requests]
- Added support for Trunk Groups. [Trunk Groups]
- Added Forward Voicemail to Peered UCMs option. [Forward Voicemail to Peered UCMs]
- Added a new Voicemail Password field under Voicemail settings. [Voicemail Password]
- Added Catalan language support under voice prompt. [LANGUAGE SETTINGS FOR VOICE PROMPT]
- Added DOD Name field under VoIP trunk settings. [Direct Outward Dialing (DOD)]
- Changed the default value of Max Wait Time to 60. [Max Wait Time]
- Added "SCA" action type to filtering CDR options. [Action Type]
- Added a prompt asking whether to delete all recording files or not on CDR. [CDR]
- Added a 64-character limit to Conference → Extension field. [Extension]
- Added a 3-character limit to Extension Incrementation field. [Extension Incrementation]
- Added a maximum limit of 500 entries to the IVR blacklist and whitelist. [IVR Black/White List]
- Added character restrictions to LDAP Number Attributes field to ensure correct input. [LDAP Client Configurations]
- Added maximum limit of 99,999 to parking timeout. [Parking Timeout]
- Added a 63-character limit to the Room Number field. [Room Number]
- Editing an already executed wakeup service will automatically change the service's status to "Programmed". [Action Status]
- Adding UCM disconnection when an SSH client changes the password for the connected user.
- LCD display will show "Recovery Mode" instead of "No Provision" when the UCM is in recovery mode. [System Recovery]
- Capture files saved on external devices will have "capture" prepended to file names. [Ethernet Capture]
- Added dashes and + characters to Fax, Home Number, and Mobile Phone Number fields.
- Updated external number to accepts only letters, numbers and special characters. [External Number]
- Added a 64-charcter limit to Custom Presence Status field. [Custom Presence Status]
- Increased the character limit for provider name field to 64 characters during creation. [Provider Name]
- Updated From Domain field to accept special characters. [From Domain]
- User Name Prompt filename character limit changed to 18. [User Name Prompt Customization]
- Increased the character limit for the wakeup service name field to 64 characters. [Wakeup Service]
- Users can now upload custom prompts directly to pages without having to get redirected to the Voice Prompt → Custom Prompt page. [Custom Prompt]
- Added character restrictions to device firmware file names. [firmware file name]
- Added Email-to-Fax support. [Enable Email-to-Fax]

Firmware Version 1.0.16.20

• Added an option to enable/disable remote voicemail access function. [Voicemail Remote Access]

Firmware Version 1.0.16.18

- Added support for emergency calls. [EMERGENCY]
- Added support for vTigerCRM [vTigerCRM]
- Added support for ZohoCRM [ZohoCRM]
- Added support for HSC PMS [HSC PMS]
- Added support for Direct Callback. [Direct Callback] [Direct Callback] [Direct Callback]
- Added option to disable call waiting under extensions. [Enable Call Waiting]
- Added option to passthrough SIP PAI Header. [Passthrough PAI Header]
- Added option to copy device settings in zero config. [Managing discovered devices]
- Added support for call failure prompts customization. [General Call Prompt Tone]
- Added option to automatically request HTTP server certificate. [Certificate Options]
- Added support to include more menus on user custom privilege. [Custom Privilege]
- Added possibility to delete CDR records based on search result. [CDR]
- Added option to send caller to specific destination when queue is empty. [CALL QUEUE]
- Added XML file type support for importing phonebooks. [LDAP Phonebook]
- Added ability to customize the LDAP name and number attributes in the Phonebook Download Configurations page [LDAP Client Configurations]
- Added option to download Call Queue Statistics. [Queue Statistics]
- Added option to choose DNS mode during calls. [DNS mode]
- Added ability to batch add devices by importing a CSV file [PROVISIONING]
- Added a Copy Device Configuration option that allows users to copy the configuration of one device to another device [PROVISIONING]
- Added ability to divide a parking lot extension into multiple lots [Parking Lot]
- Added option to reset extension settings. [Reset single extension]

Firmware Version 1.0.15.16

- Added support to announce name in Dial By Name feature. [DIAL BY NAME]
- Increased maximum number of call queue static agents. [Static Agents limitation]
- Added Queue Log Cleaner. [Cleaner]
- Added operation logs details and remarks. [Operation Log]
- Added extension level voicemail-to-Email setting. [Send Voicemail to Email] [Keep Voicemail after Emailing]
- Added support for reset certificate.
- Added support for GXP21xx color phone queue login/logout softkey. [Enable Agent Login]
- Added support to add comments to inbound/outbound route patterns. [Pattern] [Pattern]
- Added PPI mode option under SIP trunk advanced settings [PPI Mode]
- Added ability to import PIN groups from CSV files. [Importing PIN Groups from CSV files]

- Added support for wakeup groups. [WAKEUP SERVICE]
- Added support for SYN Flood defense. [SYN-Flood Defense Enable]
- Added Queue Log option to Backup/Restore page. [Backup/Restore]
- Modified Switchboard UI to offer easier access to call Options. [Switchboard]
- Further optimized Call Queue Statistics page to provide a more user-friendly experience and improve performance. [Queue Statistics]
- Added image uploading support to Email templates [Email Templates]
- Added IPv6 gateway support. [Static Routes]
- Improved Voice Message Responses for failed SIP trunk calls. [voice message responses]
- Added Fail2Ban to support TCP/TLS beside the already-supported UDP. [Fail2ban]
- Restored ability to sort the ringing order of Follow Me numbers. [FOLLOW ME]
- Added option to restrict users from changing their SIP credentials through user portal [Consumer]
- Added option to enable or disable fax-to-mail feature on extension level. [Fax To Email]
- Added IP address whitelist to web GUI configuration. [Enable IP whitelist]
- Added CDR records separation [CDR separation]

Firmware Version 1.0.14.24

• Added protection to prevent HTTP rogue login.

Firmware Version 1.0.14.23

- Restored ability to view voicemail count in the Extension/Trunk overview. [Extension Voicemail Count]
- Restored the ability to set custom numbers for call forwarding settings. [Call Forward Unconditional]
 [Call Forward No Answer] [Call Forward Busy]
- Restored previous format for entering multiple dial plans (one pattern per line) for inbound/outbound rules. [Pattern] [Pattern]
- Restored Zero Config's sorting by column and introduced a search bar. [Managing discovered devices]

Firmware Version 1.0.14.21

- A new Web GUI consistent operating style, can display/update the system's status in real time.
- Added support for SIP Presence. [PRESENCE]
- Added support for Call Center feature/Virtual Call Queue. [Call Center Settings and enhancements]
- Added support for Call Queue position announcement. [Call Center Settings and enhancements]
- Added support for Call Queue Statistics. [Queue Statistics]
- Added support for Call Queue Auto-Fill. [Queue Auto fill enhancement]
- Added switchboard for call queue monitoring. [Switchboard]
- Added ability to restore blind transfer call to transferrer. [Allow callback when blind transfer fails]
- Added support for external disk cleaner. [System Cleanup/Reset]
- Added option to enable DOD when call is being diverted/forwarded. [Use callee DOD on FWD or Ring Simultaneously]
- Change follow me settings to extension level settings. [FOLLOW ME]

- Added support for call forward whitelist. [FWD Whitelist]
- Added Fail2Ban defense from web login attack. [Login Attack Defense]
- Added limitation for maximum number of call queue static agents. [Static Agents limitation]
- Added support for wakeup service module in Custom privilege. [Custom Privilege]
- Added IPv6 support for T.38.
- Added DAHDI settings. [DAHDI Settings]
- Added ability to pass through SIP Call-Info header to support GXP phone JPEG_Over_HTTP with encryption and authentication to open door for GDS3710. [Transparent Call-Info header]

Firmware Version 1.0.13.14

- Added extension whitelist/blacklist for IVR dialing. [IVR]
- Added ability to include DOD in PPI Header for SIP trunk. [PPI Mode]
- Added advanced IPv6 support including IPv6-to-IPv4 SIP calls, IPv6 router, IPv6 iptables/Static defense.
- Added ability to customize PAI Header. [PAI Header]
- Added blacklist for outbound calls. [Outbound Blacklist]
- Added support to upload/download MOH package from Web GUI. [MUSIC ON HOLD]
- Added support to download custom prompts from Web GUI. [Download All Custom Prompt]
- Added option to configure prompt timeout in Dial By Name. [DIAL BY NAME]
- Added description field in ZeroConfig settings to configure Softkey/Line/MPK for GXP series phones. [PROVISIONING]
- Improved seamless transfer privilege control. [Seamless transfer privilege control]
- Added RTP Keep-alive support. [RTP Keep-alive]
- Added Email Send Log. [Email Send Log]
- Added support for Mitel simulation/protocol interfaces for PMS module. [PMS]
- Added support for up to 10 failover trunks. [Use Failover Trunk]

Firmware Version 1.0.12.19

- Added support for binding a mobile phone number to extension. [Mobile Phone Number]
- Added support OPUS codec.
- Added support call-barging privilege settings based on extensions. [Monitor privilege control]
- Added support for Seamless Transfer. [Seamless Transfer]
- Added support for Custom Call-Info for Auto Answer. [Custom Call-info for Auto Answer]
- Added support for DND Whitelist. [Do Not Disturb]
- Add the Field Description on Softkey, Line keys and MPK from Zero Config.
- Added support to select interval for numbers on Batch add extension. [Extension Incrementation]
- Added support for Batch Add CallerID Number. [CallerID Number]
- Added support for Search Extensions Using CallerID Name.
- Added support to Enable/Disable Inbound and Outbound Route. [Disable This Route/Disable This Route]
- Added support for Outbound Route Time Condition. [Time Condition]
- Added support for IPv6. [IPv6 Address]

- Added Support for MTU configurable. [MTU]
- Added support of CRM. [CRM]
- Added support for Custom Privilege in User Management. [Custom Privilege]
- Added Hotline support for FXS Extension. [Hotline]
- Added support for Separate Wakeup Service. [WAKEUP SERVICE]
- Added ability to provision phones from different network subnets using zero config. [Subnet Whitelist]
- One-key-dial is replaced by Speed Dial to support more than one digit. [SPEED DIAL]
- Added Append extension number in the end of DOD. [Direct Outward Dialing (DOD)]
- Support Japan CID NTT Detect.
- Added support for Ethernet Capture Auto Sync to SFTP Server. [Enable SFTP Data Sync]
- Added support for Ethernet Capture saved to External Storage Device. [Storage to External Device]
- Added support for Disable Extension Range on the Setup Wizard. [Setup Wizard]
- Added more support for Port Forwarding. [Port Forwarding (UCM6102 only)]
- Added support for USB/SD Card Files Cleanup. [USB/SD Card Files Cleanup]
- Added support for A Key Dial-up FXO. [A key Dial-up FXO]
- Added support for ACIM Detect Option for FXO. [INTERFACE SETTINGS]
- Added support for some special character on the file name of FW. [Upgrading Via Local Upload]
- Added more search criteria of CDR. [CDR]
- Added support of "Allow outgoing calls if registration failure" for register trunks. [Allow outgoing calls if registration failure]
- Added support for music on hold playback from webGUI. [MUSIC ON HOLD]
- Added support to enable delete recording files for user privilege. [Consumer]
- Added support disk Inode usage in "Storage Usage" page. [Storage Usage]
- Added support foe Ring Group/Call Queue/IVR Display Option for Caller ID. [Replace Display Name | Replace | Replace Caller ID]
- Added support for compatibility between backup package from UCM61xx and UCM62xx. [Backup/Restore]
- Added support to Detect talking users in conference. [CONFERENCE]
- Added Support of Mini Bar for PMS. [Mini Bar]

Firmware Version 1.0.11.27

- Added ability to sort extension status on Web GUI.
- Added one click enable / disable feature code. [Feature Codes]
- Added Uruguay time zone support. [Auto time updating]
- Added distinctive ring tone support. [Configure Call Queue] [Configure IVR] [Create New SIP Extension]
- Added special character support for SFTP client account. [Data Sync]
- Added destination directory support for data sync. [Data Sync]
- Added ring group music on hold. [Configure Ring Group]
- Added CDR multi-email / time condition support. [CDR]
- Added blacklist anonymous call block. [Blacklist Configurations]

- Added ability to sort selected extension in Eventlist. [Event List]
- Added Banned User list for Web GUI login attempts. [Login Settings]
- Added Email template support. [Email Templates]
- Added outbound route country restriction.
- Added external disk usage alert option. [Alert Events List]
- Added range IP input support for dynamic defense white list. [Dynamic Defense]
- Added blacklist support for Fail2ban. [Fail2ban]
- Added ability to reboot device from zero config page. [Discovery]
- Added GXP1628B template for zero config. [Model Update]
- Added PIN group support. [PIN Groups]
- Added PMS support. [PMS]
- Added call queue custom prompt support. [Configure Call Queue]
- Added call queue retry time support. [Configure Call Queue]
- Added Support for DHCP Client List. [DHCP Client List]

Firmware Version 1.0.10.44

• Added Zero Config DP750 support. [Model templates]

Firmware Version 1.0.10.39

- Added multiple modes support for inbound route. [Inbound Route: Multiple Mode]
- Added option "Enable Inbound Multiple Mode", "Inbound Default Mode" and "Inbound Mode 1" for switching inbound route mode via feature code. [Feature Codes]
- Added prepending prefix for inbound route. [Inbound Route: Prepend Example]
- Added multiple registration per extension. [Multiple Registrations per Extension]
- Added SIP Message support. [SMS Message Support]
- Added 100rel option for 100rel support. [Table 101: SIP Settings/ToS]
- Added video preview support.
- Added User Portal Page Fax sending support.
- Added Fax intelligent routing. [Fax Intelligent Route]
- Added Re-Invite with two media (audio, image) support for fax sending. [FAX with Two Media]
- Added option "Max Concurrent Sending Fax" in Fax settings. [Configure Fax/T.38]
- Added option "Fax Queue Length" in Fax settings. [Configure Fax/T.38]
- Added Google Service Setting Support. [Google Service Settings Support]
- Added Conference Schedule. [Conference Schedule]
- Added Setup Wizard. [Setup Wizard]
- Added ability to customize specific prompt. [Customize Specific Prompt]
- Added option "ALL" when making backup file. [Backup/Restore]
- Added "Enable Destination" and "Default Destination" in Follow Me settings. [FOLLOW ME]
- Added "Call Duration Limit" option in Web GUI→PBX→Internal Options→General. [PBX Settings/General]

- Added "Enable Auto E-mail Notification" option in Web GUI→PBX→Internal Options→General. [PBX Settings/General]
- Added options "ICE Support" and "STUN Server" in Web GUI→PBX→Internal Options→RTP Settings. [PBX Settings/RTP Settings]
- Added payload type setting for VP8 in Web GUI→PBX→Internal Options→Payload. [PBX Settings/Payload]
- Added options "External Host" and "Use IP address in SDP" in Web GUI→PBX→SIP Settings→NAT. [SIP Settings/NAT]
- Improved CDR. [CDR Improvement]
- Added Network Status page under Web GUI→Maintenance→Troubleshooting→Network Status [Network Status]

Firmware Version 1.0.9.26

• Added Announcements Center. [ANNOUNCEMENTS CENTER]

Firmware Version 1.0.9.25

- Added UCM Zero Config model templates for provisioning GXP2200EXT coupled with GXV3240. [Model templates]
- Added ability to select the voicemail storage (Support Email + WAV). [Voicemail Email Settings]

Firmware Version 1.0.9.23

- Added SSH enable/disable option in LCD or WEB [SSH Access]
- Added remote peer extensions in Ring Group [Remote Extension in Ring Group]
- Added ability to prepend digits in inbound routes [Table 62: Inbound Rule Configuration Parameters]
- Added ability to search extensions on Extension page. [Search and Edit Extension]
- Added user portal for users to log in with extension number, access user information, extension configuration and CDR.
- Added support to send Fax via Web GUI. [Fax Sending]
- Added "Enable LDAP" option to skip the extension from UCM default LDAP phonebook. [Table 34: SIP Extension Configuration Parameters→Basic Settings]
- Added DDNS Support. [DDNS settings]
- Added support for Call Barging using feature codes. [Enable Spy]
- Added ability to search the CDR by called number. [Table 125: CDR Filter Criteria]
- Added ability to select the file types for automatic backup. [Backup/Restore]
- Added automatic backup support on SD Card or USB storage. [Backup/Restore]
- Added support to skip trunk authentication by time condition. [Table 36: SIP Extension Configuration Parameters→Features]
- Added option to send P-Asserted-Identity header in SIP Register Trunk. [Table 54: SIP Register Trunk Configuration Parameters]

- Added ability to specify trunks in CDR filters. [CDR]
- Added ability to use Pattern in Caller Number to filter CDR. [CDR]
- Added support to send UNREGISTER when VoIP trunk is disabled. [Table 54: SIP Register Trunk Configuration Parameters]
- Added LDAP Client support [LDAP Client Configurations]
- Added option to specify the chronological order of voice mails. [Table 68: Voicemail Settings]
- Added option to configure whether to skip pressing 1/2 to accept or reject calls from Follow Me. [Table 81: Follow Me Settings]
- Added option to specify port range in Port Forwarding configuration. [Table 12: UCM6102 Network Settings->Port Forwarding]
- Added ability to go back to IVR menu from Dial By Name by pressing the star key. [Dial by Name Configuration]
- Added support to upgrade SIP end device via SD card in Zero Config. [Table 28: Global Policy Parameters

 Maintenance]
- Added ability to filter alert logs. [Alert Log]
- Added ability to delete alert logs. [Alert Log]
- Added NAT option for peer trunk. [SIP Peer Trunk Configuration Parameters]
- Improved Automatic Download CDR result format.[CDR]

Firmware Version 1.0.8.12

- Added recording files store management. [PBX Settings/Recordings Storage]
- Added AMI access (restricted). [ASTERISK MANAGER INTERFACE (RESTRICTED ACCESS)]
- Added LDAP Phonebook Import/Export support. [LDAP Phonebook]
- Added Callback feature. [CALLBACK FEATURES]
- Added Busy Camp-on (Call Completion) feature. [busy camp-on]
- Added external number calling via extension. [Table 36: SIP Extension Configuration Parameters-→Features]
- Added end point firmware management support to allow end point device to upgrade via UCM6100 local storage or USB media. [Table 28: Global Policy Parameters Maintenance]
- Added link to access phone web GUI in Zero Config. [Manage Devices]
- Added model update support to download model templates for surveillance and GSWave. [Model Update]
- Added filter for searching in Alert Log. [Alert Log]
- Added DAHDI Out Line Selection. [Table 51: Analog Trunk Configuration Parameters]
- Added automatic CDR download. [CDR]
- Added multi-user management and concurrent user login support. [User Management]
- Added operation log. [Operation Log]
- Added option to specify web access session timer. [Login Settings]
- Added call monitor/barge-in support.
- Added GSwave QR code support. [E-mail Notification]
- Added ability to add customized Pvalue on Model Template. [Model templates]
- Updated maximum length of Web GUI login password to 30 characters. [Change Password]

- Added Fax gateway support for Fax mode on FXS and FXO port.
- Added "NAT" option and "Send PPI Header" option in SIP register trunk configuration. [Table 54: SIP Register Trunk Configuration Parameters]
- Added REC API (access for call recording files). [REC API]
- Added "Synchronize All Data" option in Data Sync. [Data Sync]
- Added "Detect Selected Sound Files" option for Music On Hold files. [MUSIC ON HOLD]

Firmware Version 1.0.7.11

- Added office time and holiday setting. [Office Time] [Holiday]
- Added new architecture for auto provisioning via Zero Config. [PROVISIONING]
- Added Alert-info configuration for distinctive ringing on inbound route. [Table 62: Inbound Rule Configuration Parameters]
- Added SLA support to monitor FXO trunk. [SLA]
- Added Follow Me support. [FOLLOW ME]
- Added One-Key Dial support.
- Added FXO Dial Delay option for analog trunk. [Table 51: Analog Trunk Configuration Parameters]
- Added Music On Hold selection per extension. [EXTENSIONS]
- Added Call Forward Time Condition per extension. [EXTENSIONS]
- Added custom prompt support for ring group announcement. [Table 72: Ring Group Parameters]
- Added custom prompt support for paging/intercom group announcement. [Table 73: Paging/Intercom Group Configuration Parameters]
- Added options to delete voicemail and Fax files via cleaner. [System Clean]
- Added DTMF configuration per trunk. [VOIP TRUNKS]
- Added call queue Music On Hold customization. [Table 75: Call Queue Configuration Parameters]
- Added call queue destination support. [Table 75: Call Queue Configuration Parameters]
- Added batch add blacklist file support. [Blacklist Configurations]

Firmware Version 1.0.6.11

• Added service check options under Web GUI→Maintenance→Troubleshooting→Service Check page to regularly check Asterisk service.

Firmware Version 1.0.6.10

- Added static routes function. [Static Routes]
- Added option to provision end devices' date format, time format and time zone in zero config.
- Added option to disable extension/trunk.
- Added TEL URL support for extension/trunk.
- Added option to dial trunk password per extensions.
- Added export extension and import extension function. [Export Extensions] [Import Extensions]
- Added option "Need Registration" for SIP register trunk.

- Added option "The Maximum Number of Call Line" for trunk.
- Added Dial By Name. [DIAL BY NAME]
- Added voicemail password and Email address for voicemail group extension.
- Added auto record support for ring group and call queue.
- Added VFax file display, download and delete interface in Web GUI.
- Changed web page name from "Hardware Config" to "Ports Config".
- Added payload configuration for audio/video codecs. [PBX Settings/Payload]
- Added activity calls status on Web GUI status page.
- Added CDR API support. [CDR API]
- Added more alert events support such as Register SIP Failed, Register SIP Trunk Failed, Restore Config, User Login Success, User Login Failed, SIP Internal Call Failure and etc. [Alert Events List]

Firmware Version 1.0.5.19

- Added built-in data migration tool to support upgrading from 1.0.4.7 to 1.0.5.19 without factory reset.
- Added "Direct Dial Voicemail Prefix" feature code back. [Table 87: UCM6100 Feature Codes]
- Changed valid range for option "Current Disconnect Threshold". [Table 51: Analog Trunk Configuration Parameters]

Firmware Version 1.0.5.14

- New backend data structure and Web GUI performance improvement. 1.0.5.14 is not compatible with previous firmware versions. Once upgraded to 1.0.5.14, the device needs to be FULLY RESET and RE-CONFIGURED MANUALLY.
- Added traditional Chinese language for Web GUI. [Web GUI Languages]
- Added "Enable Filter Source Caller ID" and "Custom Dynamic Route" options for outbound route settings. [Table 60: Outbound Route Configuration Parameters]
- Added more language support for voice prompt. [LANGUAGE SETTINGS]
- Added "Ring Group Destination" for ring group configuration. [Table 72: Ring Group Parameters]
- Added "Extension Groups" section in Web GUI. [EXTENSION GROUPS]
- Added "Pickup Groups" section in Web GUI. [PICKUP GROUPS]
- Added BLF function description. [BLF AND EVENT LIST]
- Updated default extension range. [Table 91: Internal Options/General]
- Added sample descriptions for downloaded CDR file. [Downloaded CDR File]

Firmware Version 1.0.4.7

- Asterisk updated to version 1.8.23.1.
- Added DID routing support for incoming calls. [Table 53: Create New SIP Trunk]
- Added DOD routing support. [Direct Outward Dialing (DOD)]
- Added GXP one-button Voicemail access. [Table 34: SIP Extension Configuration Parameters]

- Added option "Skip voicemail password verification" on extension edit page. [Table 34: SIP Extension Configuration Parameters]
- Added Hot-Desking Support. [Table 34: SIP Extension Configuration Parameters]
- Added one-button on-demand call recording for GXP
- Add new option to enable or disable "FXS TISS Override" on Hardware Config page. [PBX Interface Settings]
- Added more modes for FXS Two-Wire Impedance Synthesis
- Added LDAP Sync manual trigger function and synced date displaying. [VOIP TRUNKS]
- Improved LDAP Sync function, added retrying, file verifying and progress displaying function
- Added option "Pick Extension Period" on auto-provision settings page of Zero Config
- Added multiple extension assignment support on device edit page of Zero Config
- Added "Reset All Extensions" button at the Zero Config page to recycle all assigned extensions. [Auto Provisioning]
- Added system crash alarm, core dump detection and allow users to download core dump file. [Figure 256: System Events →Alert Events Lists: System Crash]
- Add "Keep Trunk CID" option for VoIP trunks, and keep the priorities: DOD→Extension CallerID→Trunk CallerID→Global CallerID. [Table 53: Create New SIP Trunk]

Firmware Version 1.0.3.13

- Added Fail2Ban support for SIP authentication. [Fail2ban]
- Added "Auto Record" option for trunk.
- Added "Digit Timeout" option and voice prompt "Language" selection for IVR. [IVR Configuration Parameters]
- Added "Direct Dial Voicemail Prefix" feature code to directly dial or transfer to extension's voicemail. [Table 87: UCM6100 Feature Codes]
- Added "Enforce Strong Passwords" option. [Table 91: Internal Options/General]
- Added FXS MWI Mode. [PBX Interface Settings]
- Added system events with alert and Email notification support. [System Events]
- Added new web page for recording files. [Recording Files]

Firmware Version 1.0.2.21

- Added weight information. [Table 1: Technical Specifications]
- Added NTP server support. [NTP Server]
- Added Czech language for web GUI display. [Web GUI Languages]
- Added VLAN support. "Layer 2 QoS 802.1Q/VLAN tag" and "Layer 2 QoS 802.1p priority value" options for network port settings are added. [Network Settings]
- Updated LDAP client configurations information.
- Added sample Email settings. [Email]
- Added "Enable Pick Extension" and "Extension Segment" options for auto provisioning settings.
- Changed one of the discovery methods from "SIP MESSAGE (OPTIONS)" to "SIP MESSAGE (NOTIFY)" in zero-config feature.

- Added pickup group feature. [Table 87: UCM6100 Feature Codes]
- Added PSTN detection instructions for "Auto Detect" and "Semi-auto Detect". [PSTN Detection]
- Added "Auth ID" option for SIP register trunk configuration. [Table 53: Create New SIP Trunk]
- Added LDAP sync options for peer SIP trunk. [Table 53: Create New SIP Trunk]
- Changed the default setting of outbound route "Privilege Level" from "Internal" to "International" to avoid potential misconfiguration and security risk.
- Added DISA and Fax to IVR key press event options. [IVR Configuration Parameters]
- Added "Min Message Time" option in voicemail settings. [Table 68: Voicemail Settings]
- Added Fax setting samples. [Fax]
- Added DISA support for inbound route and IVR.
- Added Event List support to monitor local extensions and remote extensions. [BLF AND EVENT LIST]
- Added feature code *0 for "Disconnect". [Table 87: UCM6100 Feature Codes]
- Added feature code *8 for "Pickup Extension" in pickup group feature. [Table 87: UCM6100 Feature Codes]
- Added "Record Prompt" and "Custom Name of Pickup Group" options in internal options. [Table 91: Internal Options/General]
- Added warning information for "Allow Guest Call" option to avoid potential security risk caused by misconfiguration. [Table 102: IAX Settings/General]
- Changed reset mode to two mode "User Data" and "All".

Firmware Version 1.0.1.22

• This is the initial version.

WELCOME

Thank you for purchasing Grandstream UCM6100 series IP PBX appliance. The UCM6100 series IP PBX appliance is designed to bring enterprise-grade voice, video, data, and mobility features to small-to-medium businesses (SMBs) in an easy-to-manage fashion. This IP PBX series allows businesses to unify multiple communication technologies, such comprehensive voice, video calling, video conferencing, video surveillance, data tools and facility access management onto one common network that that can be managed and/or accessed remotely. The UCM6100 series sports a 1GHz ARM Cortex A8 processor, 512MB RAM and 4GB flash. The secure and reliable UCM6100 series delivers enterprise-grade features without any licensing fees, costs-perfeature or recurring fees.

▲ Caution:

Changes or modifications to this product not expressly approved by Grandstream, or operation of this product in any way other than as detailed by this User Manual, could void your manufacturer warranty.

Marning:

Please do not use a different power adaptor with the UCM6100 as it may cause damage to the products and void the manufacturer warranty.

This document is subject to change without notice. The latest electronic version of this user manual is available for download here:

http://www.grandstream.com/support

Reproduction or transmittal of the entire or any part, in any form or by any means, electronic or print, for any purpose without the express written permission of Grandstream Networks, Inc. is not permitted.

PRODUCT OVERVIEW

Technical Specifications

The following table resumes all the technical specifications including the protocols / standards supported, voice codecs, telephony features, languages and upgrade/provisioning settings for UCM6100 series.

Interfaces		
Analog Telephone FXS Ports	 2 ports (both with lifeline capability in case of power outage) Supports 2 REN per each FXS port.	
PSTN Line FXO Ports	 UCM6102: 2 ports UCM6104: 4 ports UCM6108: 8 ports UCM6116: 16 ports 	
Network Interfaces	 UCM6102/6104: Dual Gigabit RJ45 ports with integrated PoE Plus (IEEE 802.3at-2009) UCM6108/6116: Single Gigabit RJ45 port with integrated PoE Plus (IEEE 802.3at-2009) 	
NAT Router	Yes, UCM6102 only	
Peripheral Ports	USB, SD	
LED Indicators	Power/Ready, Network, PSTN Line, USB, SD	
LCD Display	128x32 graphic LCD with DOWN and OK button	
Reset Switch	Yes	
Voice/Video Capabilities		
Voice-over-Packet Capabilities	LEC with NLP Packetized Voice Protocol Unit, 128ms-tail-length carrier grade Line Echo Cancellation, Dynamic Jitter Buffer, Modem detection and auto-switch to G.711	
Voice and Fax Codecs	G.711 A-law/U-law, G.722, G.723.1 5.3K/6.3K, G.726, G.729A/B, iLBC (30ms only), GSM, AAL2-G.726-32, ADPCM; T.38	
Video Codecs	H.264, H.265, H.263, H.263+	
QoS	Layer 3 QoS, Layer 2 QoS	
Signaling and Control		
DTMF Methods	In Audio, RFC2833, and SIP INFO	

Table 1: Technical Specifications

Provisioning Protocol and Plug-and-Play	TFTP/HTTP/HTTPS, auto-discovery and auto-provisioning of Grandstream IP endpoints via ZeroConfig (DHCP Option 66/multicast SIP SUBSCRIBE/mDNS), eventlist between local and remote trunk		
Network Protocols	TCP/UDP/IP, RTP/RTCP, ICMP, ARP, DNS, DDNS, DHCP, NTP, TFTP, SSH, HTTP/HTTPS, PPPoE, SIP (RFC3261), STUN, SRTP, TLS		
Disconnect Methods	Call Progress Tone, Polarity Reversal, Hook Flash Timing, Loop Current Disconnect, Busy Tone		
Security			
Media	SRTP, TLS, HTTPS, SSH		
Physical			
Universal Power Supply	 Output: 12VDC, 1.5A Input: 100-240VAC, 50-60Hz 		
Dimensions	 UCM6102/6104: 226mm (L) x 155mm (W) x 34.5mm (H) UCM6108/6116: 440mm (L) x 185mm (W) x 44mm (H) 		
Environmental	 Operating: 32 - 104°F / 0 - 40°C, 10-90% (non-condensing) Storage: 14 - 140°F / -10 - 60°C 		
Mounting	 UCM6102/6104: Wall mount and Desktop UCM6108/6116: Rack mount and Desktop 		
Weight	 UCM6102: Unit weight 0.51kg, Package weight 0.94kg UCM6104: Unit weight 0.51kg, Package weight 0.94kg UCM6108: Unit weight 2.23kg, Package weight 3.09kg UCM6116: Unit weight 2.27kg, Package weight 3.14kg 		
Additional Features			
Multi-language Support	English/Simplified Chinese/Traditional Chinese/Spanish/French/ Portuguese/German/Russian/Italian/Polish/Czech for Web GUI; Customizable IVR/voice prompts for English, Chinese, British English, German, Spanish, Greek, French, Italian, Dutch, Polish, Portuguese, Russian, Swedish, Turkish, Hebrew, Arabic; Customizable language pack to support any other languages		
Caller ID	Bellcore/Telcordia, ETSI-FSK, ETSI-DTMF, SIN 227 - BT		
Polarity Reversal/ Wink	Yes, with enable/disable option upon call establishment and termination		
Call Center	Multiple configurable call queues, automatic call distribution (ACD) based on agent skills/availability busy level, in-queue announcement		
Customizable Auto Attendant	Up to 5 layers of IVR (Interactive Voice Response)		
Maximum Call Capacity	 UCM6102: Up to 30 simultaneous calls UCM6104: Up to 45 simultaneous calls UCM6108/6116: Up to 60 simultaneous calls 		

	Or up to 66% performance if calls are SRTP encrypted			
Conference Bridges	 UCM6102/6104: Up to 3 password-protected conference bridges allowing up to 25 simultaneous PSTN or IP participants UCM6108/6116: Up to 6 password-protected conference bridges allowing up to 32 simultaneous PSTN or IP participants 			
Call Features	• Call park, call forward, call transfer, DND, ring/hunt group, paging/intercom and etc			
Compliance	 FCC: Part 15 (CFR 47) Class B, Part 68 CE: EN55022 Class B, EN55024, EN61000-3-2, EN61000-3-3, EN60950-1, TBR21, RoHS A-TICK: AS/NZS CISPR 22 Class B, AS/NZS CISPR 24, AS/NZS 60950, AS/ACIF S002 and ITU-T K.21 (Basic Level) UL 60950 (power adapter) 			
Analog Telephone FXS Ports	 2 ports (both with lifeline capability in case of power outage) Supports 2 REN per each FXS port. 			

▲ Note:

- UCM6100 FXS ports lifeline functionality:
- The UCM6100 FXS interfaces are metallic through to the FXO interfaces. If there is power outage, FXS1 port will fail over to FXO 1 port, FXS 2 port will fail over to FXO 2 port. The user can still access the PSTN connected with the FXO interfaces from FXS interfaces.

INSTALLATION

Before deploying and configuring the UCM6100 series, the device needs to be properly powered up and connected to network. This section describes detailed information on installation, connection and warranty policy of the UCM6100 series.

Equipment Packaging

Table 2: UCM6100 Equipment Packaging

Main Case	Yes (1)
Power Adaptor	Yes (1)
Ethernet Cable	Yes (1)
Quick Installation Guide	Yes (1)
GPL License	Yes (1)

Connect Your UCM6100

Connect The UCM6102

Figure 1: UCM6102 Front View

Figure 2: UCM6102 Back View

To set up the UCM6102, follow the steps below:

- 1. Connect one end of an RJ-45 Ethernet cable into the WAN port of the UCM6102.
- 2. Connect the other end of the Ethernet cable into the uplink port of an Ethernet switch/hub.
- 3. Connect the 12V DC power adapter into the 12V DC power jack on the back of the UCM6102. Insert the main plug of the power adapter into a surge-protected power outlet.
- 4. Wait for the UCM6102 to boot up. The LCD in the front will show the device hardware information when the boot process is done.
- 5. Once the UCM6102 is successfully connected to network, the LED indicator for WAN in the front will be in solid green and the LCD shows up the IP address.
- 6. (Optional) Connect PSTN lines from the wall jack to the FXO ports; connect analog lines (phone and Fax) to the FXS ports.

Connect The UCM6104

Figure 3: UCM6104 Front View

Figure 4: UCM6104 Back View

To set up the UCM6104, follow the steps below:

- 1. Connect one end of an RJ-45 Ethernet cable into the LAN 1 port of the UCM6104.
- 2. Connect the other end of the Ethernet cable into the uplink port of an Ethernet switch/hub.
- 3. Connect the 12V DC power adapter into the 12V DC power jack on the back of the UCM6104. Insert the main plug of the power adapter into a surge-protected power outlet.
- 4. Wait for the UCM6104 to boot up. The LCD in the front will show the device hardware information when the boot process is done.
- 5. Once the UCM6104 is successfully connected to network, the LED indicator for LAN 1 in the front will be in solid green and the LCD shows up the IP address.
- 6. (Optional) Connect PSTN lines from the wall jack to the FXO ports; connect analog lines (phone and Fax) to the FXS ports.

Connect The UCM6108

To set up the UCM6108, follow the steps below:

- 1. Connect one end of an RJ-45 Ethernet cable into the LAN port of the UCM6108.
- 2. Connect the other end of the Ethernet cable into the uplink port of an Ethernet switch/hub.
- 3. Connect the 12V DC power adapter into the 12V DC power jack on the back of the UCM6108. Insert the main plug of the power adapter into a surge-protected power outlet.
- 4. Wait for the UCM6108 to boot up. The LCD in the front will show the device hardware information when the boot process is done.
- 5. Once the UCM6108 is successfully connected to network, the LED indicator for NETWORK in the front will be in solid green and the LCD shows up the IP address.
- 6. (Optional) Connect PSTN lines from the wall jack to the FXO ports; connect analog lines (phone and Fax) to the FXS ports.

Figure 5: UCM6108 Front View

Figure 6: UCM6108 Back View

Connect The UCM6116

Figure 7: UCM6116 Front View

Figure 8: UCM6116 Back View

To set up the UCM6116, follow the steps below:

- 1. Connect one end of an RJ-45 Ethernet cable into the LAN port of the UCM6116.
- 2. Connect the other end of the Ethernet cable into the uplink port of an Ethernet switch/hub.
- 3. Connect the 12V DC power adapter into the 12V DC power jack on the back of the UCM6116. Insert the main plug of the power adapter into a surge-protected power outlet.
- 4. Wait for the UCM6116 to boot up. The LCD in the front will show the device hardware information when the boot process is done.
- 5. Once the UCM6116 is successfully connected to network, the LED indicator for NETWORK in the front will be in solid green and the LCD shows up the IP address.
- 6. (Optional) Connect PSTN lines from the wall jack to the FXO ports; connect analog lines (phone and Fax) to the FXS ports.

Safety Compliances

The UCM6100 series IP PBX complies with FCC/CE and various safety standards. The UCM6100 power adapter is compliant with the UL standard. Use the universal power adapter provided with the UCM6100 package only. The manufacturer's warranty does not cover damages to the device caused by unsupported power adapters.

Warranty

If the UCM6100 series IP PBX was purchased from a reseller, please contact the company where the device was purchased for replacement, repair or refund. If the device was purchased directly from Grandstream, contact our Technical Support Team for a RMA (Return Materials Authorization) number before the product is returned. Grandstream reserves the right to remedy warranty policy without prior notification.

Marning:

Use the power adapter provided with the UCM6100 series IP PBX. Do not use a different power adapter as this may damage the device. This type of damage is not covered under warranty.

GETTING STARTED

The UCM6100 series provides LCD interface, LED indication and Web GUI configuration interface.

- The LCD displays hardware, software and network information. Users could also navigate in the LCD menu for device information and basic network configuration.
- The LED indication at the front of the device provides interface connection and activity status.
- The Web GUI gives users access to all the configurations and options for UCM6100 series setup.

This section provides step-by-step instructions on how to use the LCD menu, LED indicators and Web GUI of the UCM6100 series. Once the basic settings are done, users could start making calls from UCM6100 extension registered on a SIP phone as described at the end of this section.

Use the LCD Menu

• Default LCD Display

When the device is powered up, the LCD will show device model (e.g., UCM6116), hardware version (e.g., V1.5A) and IP address. Press "Down" button and the system time will be displayed as well.

Menu Access
 Press "OK" button to start browsing menu options. Please see menu options in [Table 3: LCD Menu Options].

Menu Navigation Description Descripti Descripti Description Descripti

Press the "Down" arrow key to browser different menu options. Press the "OK" button to select an entry.

• Exit

If "Back" option is available in the menu, select it to go back to the previous menu. For "Device Info" "Network Info" and "Web Info" which do not have "Back" option, simply press the "OK" button to go back to the previous menu. Also, the LCD will display default idle screen after staying in menu option for 15 seconds.

LCD Backlight

The LCD backlight will be on upon key pressing. The backlight will go off after the LCD stays in idle for 30 seconds.

The following table summarizes the layout of the LCD menu of UCM.

Table 3: LCD Menu Options

View Events	Critical EventsOther Events
Device Info	 Hardware: Hardware version number Software: Software version number P/N: Part number WAN MAC: WAN side MAC address (UCM6102 only) LAN MAC: LAN side MAC address Uptime: System up time
Network Info	 For UCM6104/UCM6108/UCM6116: LAN Mode: DHCP, Static IP, or PPPoE LAN IP: IP address LAN Subnet Mask For UCM6102: WAN Mode: DHCP, Static IP, or PPPoE WAN IP: IP address WAN Subnet Mask LAN IP: IP address LAN IP: IP address LAN IP: IP address LAN Subnet Mask
Network Menu	 For UCM6104/UCM6108/UCM6116: LAN Mode: Select LAN mode as DHCP, Static IP or PPPoE Static Route Reset: Click to reset the static route setting For UCM6102: WAN Mode: Select WAN mode as DHCP, Static IP or PPPoE Static Route Reset: Click to reset the static route setting
Factory Menu	 Reboot Factory Reset LCD Test Patterns Press "OK" to start. Then press "Down" button to test different LCD patterns. When done, press "OK" button to exit. Fan Mode Select "Auto" or "On". LED Test Patterns

Select "All On" "All Off" or "Blinking" and check LED status.
RTC Test Patterns
Select "2022-02-22 22:22" or "2011-01-11 11:11" to start the RTC (Real- Time Clock) test pattern. Then check the system time from LCD idle screen by pressing "DOWN" button, or from web GUI \rightarrow System Status \rightarrow General page. Reboot the device manually after the RTC test is done.
Hardware Testing
Select "Test SVIP" to perform SVIP test on the device. This is mainly for factory testing purpose which verifies the hardware connection inside the device. The diagnostic result will display in the LCD after the test is done.
• Protocol : Web access protocol. HTTP or HTTPS. By default, it's HTTPS
• Port: Web access port number. By default, it's 8089
Enable SSH: Enable SSH access.
Disable SSH: Disable SSH access.
By default, SSH access is disabled.

Use the LED Indicators

The UCM6100 has LED indicators in the front to display connection status. The following table shows the status definitions.

Table 4: UCM6102/UCM6104 LED Indicators

LED Indicator	LED Status		
LAN			
WAN			
USB	Solid: Connected		
SD	Flashing: Data Transferring		
FXS (Phone/Fax)	OFF: Not Connected		
FXO (Telco Line)			

Table 5: UCM6108/UCM6116 LED Indicators

LED	LED Status		
NETWORK	 Solid: Connected OFF: Not Connected 		
ACT USB SD Phone (FXS) Line (FXO)	Solid: Connected Flashing: Data Transferring OFF: Not Connected		

Use the Web GUI

Access Web GUI

The UCM6100 embedded Web server responds to HTTP/HTTPS GET/POST requests. Embedded HTML pages allow users to configure the device through a Web browser such as Microsoft IE, Mozilla Firefox, Google Chrome.

GRANDSTREAM			
	Welcome to U	CM6104	
	Please login to manage you		
	Please enter the username	1	
	Please enter the password	<u>A</u>	
	Login		
		Forgot Password?	
A CONTRACT OF			

Figure 9: UCM6102 Web GUI Login Page

To access the Web GUI:

- 1. Connect the computer to the same network as the UCM6100.
- 2. Ensure the device is properly powered up and shows its IP address on the LCD.
- 3. Open a Web browser on the computer and enter the Web GUI URL in the following format:

http(s)://IP-Address:Port

where the *IP-Address* is the IP address displayed on the UCM6100 LCD.

By default, the protocol is HTTPS and the Port number is 8089.

For example, if the LCD shows 192.168.40.167, please enter the following in your web browser:

https://192.168.40.167:8089

4. Enter default administrator username "admin" and password.

Note: Units manufactured starting January 2017 have a unique random password printed on the sticker located on the back of the unit. It is highly recommended to change the default password after login for the first time. Older units have default password "admin". See below pictures for the location of the default random password:

▲ Note:

By default, the UCM6100 has "Redirect From Port 80" enabled. Therefore, if users type in the UCM6100 IP address in the web browser, the web page will be automatically redirected to the page using HTTPS and port 8089. For example, if the LCD shows 192.168.40.167, please enter 192.168.40.167 in your web browser and the web page will be redirected to: https://192.168.40.167:8089

The option "Redirect From Port 80" can be set under the UCM6100 Web GUI \rightarrow System Settings \rightarrow HTTP Server.

Setup Wizard

When the user logs in the UCM6100 Web GUI for the first time, a setup wizard will guide the user to set up basic configuration. Configurations in setup wizard includes: **Time zone, Change password, Network settings, Extensions, Trunk and routes.**

S UCM6104				Setup Wizard	English $\curlyvee \mid igcap_{igcap}$ admin \curlyvee
Setup Wizard					
1 Change Password	2 Network Settings	3 Select Time Zone	(4) Extensions	5 Trunks / Routes	6 Summary
Change Password					
Enter Old Password:					
Enter New Password:					
Re-enter New					
Password :					
Email Address :					
Next Quit					

Figure 10: UCM6100 Setup Wizard

Users can disable the Extension Range during configuration on the Extensions.

During the wizard, the user can quit the setup wizard at any time to start over with manual configuration. At the last step of the wizard, the user will be provided with summary for review, before the configuration is loaded. Once the setup is completed, the system is ready to go.

Web GUI Configurations

There are eight main sections in the Web GUI for users to view the PBX status, configure and manage the PBX.

- System Status: Displays PBX status, System Status, Active calls and network status.
- Extension/Trunk: To configure extensions, trunks and manage inbound/outbound call routes.
- Call Features: To Configure call features such as ring groups, call queues, IVR ... Etc
- **PBX Settings:** Extension ranges, SIP Settings, interfaces settings and MOH.
- **System Settings:** To configure user management, network settings, firewall settings, change password, LDAP Server, HTTP Server, Email Settings, Time Settings, NTP server and login timeout.
- **Maintenance**: To perform firmware upgrade, backup configurations, cleaner setup, reset/reboot, syslog setup and troubleshooting.
- CDR: View call statistics and download CDR and call recordings.
- Value-added Features: Zero Config, enable CTI server, CRM, PMS WebRTC.

Web GUI Languages

Currently the UCM6100 series Web GUI supports *English, Simplified Chinese, Traditional Chinese, Spanish, French, Portuguese, Russian, Italian, Polish, German etc.*

Users can select the displayed language in Web GUI login page, or at the upper right of the Web GUI after logging in.

Figure 11: UCM6100 Web GUI Language

Save and Apply Changes

Click on "Save" button after configuring the Web GUI options in one page. After saving all the changes, make sure click on "Apply Changes" button on the upper right of the web page to submit all the changes. If the change requires reboot to take effect, a prompted message will pop up for you to reboot the device.

Make Your First Call

Power up the UCM6100 and your SIP end point phone. Connect both devices to the network. Then follow the steps below to make your first call.

- 1. Log in the UCM6100 Web GUI, go to Extension/Trunk→Extensions.
- 2. Click on + Add to create a new extension. You will need User ID, Password and Voicemail Password information to register and use the extension later.
- 3. Register the extension on your phone with the SIP User ID, SIP server and SIP Password information. The SIP server address is the UCM6100 IP address.
- 4. When your phone is registered with the extension, dial *97 to access the voicemail box. Enter the Voicemail Password once you hear "Password" voice prompt.
- 5. Once successfully logged in to the voicemail, you will be prompted with the Voice Mail Main menu.
- 6. You are successfully connected to the PBX system now.

SYSTEM SETTINGS

This section explains configurations for system-wide parameters on the UCM6100. System settings are under "System Settings" tab on UCM6100 Web GUI. System settings include User Management, Network Settings, Firewall/Security Settings, Change Password, LDAP server, HTTP server, Email settings, Time Settings, NTP Server, Recordings Storage and Login Timeout settings.

HTTP Server

The UCM6100 embedded web server responds to HTTP/HTTPS GET/POST requests. Embedded HTML pages allow the users to configure the PBX through a Web browser such as Microsoft IE, Mozilla Firefox and Google Chrome. By default, the PBX can be accessed via HTTPS using Port 8089 (e.g., https://192.168.40.50:8089). Users could also change the access protocol and port as preferred under Web GUI→System Settings→HTTP Server.

Table 6: HTTP Server Settings		
Redirect From Port 80	Enable or disable redirect from port 80. On the PBX, the default access protocol is HTTPS and the default port number is 8089. When this option is enabled, the access using HTTP with Port 80 will be redirected to HTTPS with Port 8089. The default setting is "Enable".	
Protocol Type	Select HTTP or HTTPS. The default setting is "HTTPS". This is also the protocol used for zero config when the end point device downloads the config file from the UCM6100.	
Port	Specify port number to access the HTTP server. The default port number is 8089.	
Enable IP whitelist	If enabled, only the IP address on the permitted IP list will be allowed to access the UCM's web GUI.	
Permitted IP(s)	Add an IP address to the list of allowed IPs to access UCM's web GUI. Ex: 192.168.6.233 / 255.255.255.255	
Certificate Options	 Select the mode to download SSL certificates for web server, two modes are available: Manually Upload certificate: Upload the files while respecting size and format. Automatically request certificate: enter domain from which to request the certificate files. 	
TLS Private Key	Upload private key for the built-in http server. Note: The size of the key file must be under 2MB and the it will be renamed as "private.pem" automatically.	

	Upload certificate for the built-in http server and override the existing one.		
	Note: The size of your certificate must be under 2MB. This is the certificate		
TLS Cert	file (*.pem format only) for TLS connection and it will be renamed as		
	"certificate.pem" automatically. It contains private key for the client and		
	signed certificate for the server.		
	Enter the domain name from which to request certificate files then press		
Domain	on Request Certificate in order to request the files.		

Once the change is saved, the web page will be redirected to the login page using the new URL. Enter the username and password to login again.

Network Settings

After successfully connecting the UCM6100 to the network for the first time, users could login the Web GUI and go to **System Settings**→**Network Settings** to configure the network parameters for the device.

The network setting options are similar for UCM6108 and UCM6116. Additional network functions and settings are available for UCM6102 and UCM6104:

- UCM6102 supports Route/Switch/Dual mode functions.
- UCM6104 supports Switch/Dual mode functions.

In this section, all the available network setting options are listed for each model. Select each tab in web $GUI \rightarrow System Settings \rightarrow Network Settings$ page to configure LAN settings, WAN settings (UCM6102 only), 802.1X and Port Forwarding (UCM6102 only).

Basic Settings

Please refer to the following tables for basic network configuration parameters on UCM6102, UCM6104, and UCM6108/UCM6116 respectively.

	Select "Route", "Switch" or "Dual" mode on the network interface of UCM6102.
	The default setting is "Route".
	Route
Method	WAN port interface will be used for uplink connection. LAN port interface will
Method	be used to serve as router.
	Switch
	WAN port interface will be used for uplink connection. LAN port interface will
	be used as bridge for PC connection.

Table 7: UCM6102 Network Settings→Basic Settings

	 Dual Both ports can be used for uplink connection. Users will need assign LAN 1 or LAN 2 as the default interface in option "Default Interface" and configure "Gateway IP" for this interface. 					
MTU	Specifies the Maximum Transmission Unit. (By default, it is 1500)					
IPv4 Address						
Preferred DNS Server Enter the preferred DNS server address. If Preferred DNS is used, UCM use it as Primary DNS server.						
WAN (when "Method"	is set to "Route")					
IP Method	Select DHCP, Static IP, or PPPoE. The default setting is DHCP.					
IP Address	Enter the IP address for static IP settings. The default setting is 192.168.0.160.					
Subnet Mask	Enter the subnet mask address for static IP settings. The default setting is 255.255.0.0.					
Gateway IP	Enter the gateway IP address for static IP settings. The default setting is 0.0.0.0.					
DNS Server 1	Enter the DNS server 1 address for static IP settings. The default setting is 0.0.0.0.					
DNS Server 2	Enter the DNS server 2 address for static IP settings.					
User Name	Enter the user name to connect via PPPoE.					
Password	Enter the password to connect via PPPoE.					
Layer 2 QoS 802.1Q/VLAN Tag	Assign the VLAN tag of the layer 2 QoS packets for WAN port. The default value is 0.					
Layer 2 QoS 802.1p Priority Value	Assign the priority value of the layer 2 QoS packets for WAN port. The default value is 0.					
LAN (when Method is s	set to "Route")					
IP Address	Enter the IP address assigned to LAN port. The default setting is 192.168.2.1.					
Subnet Mask	Enter the subnet mask. The default setting is 255.255.255.0.					
DHCP Server Enable	Enable or disable DHCP server capability. The default setting is "Yes".					
DNS Server 1	Enter DNS server address 1. The default setting is 8.8.8.8.					
DNS Server 2	Enter DNS server address 2. The default setting is 208.67.222.222.					
Allow IP Address From	Enter the DHCP IP Pool starting address. The default setting is 192.168.2.100.					
Allow IP Address To	Enter the DHCP IP Pool ending address. The default setting is 192.168.2.254.					
Default Gateway	Configure the default gateway assigned by the DHCP server.					
Default IP Lease Time	Enter the IP lease time (in seconds). The default setting is 43200.					
Layer 2 QoS 802.1Q/VLAN Tag	Assign the VLAN tag of the layer 2 QoS packets for LAN port. The default value is 0.					
Layer 2 QoS 802.1p	Assign the priority value of the layer 2 QoS packets for LAN port. The default value					

Priority Value	is 0.					
LAN (when Method is set to "Switch")						
IP Method	Select DHCP, Static IP, or PPPoE. The default setting is DHCP.					
IP Address	Enter the IP address for static IP settings. The default setting is 192.168.0.160.					
Subnet Mask	Enter the subnet mask. The default setting is 255.255.0.0.					
Gateway IP	Enter the gateway IP address for static IP settings. The default setting is 0.0.0.0.					
DNS Server 1	Enter the DNS server 1 address for static IP settings. The default setting is 0.0.0					
DNS Server 2	Enter the DNS server 2 address for static IP settings.					
User Name	Enter the user name to connect via PPPoE.					
Password	Enter the password to connect via PPPoE.					
Layer 2 QoS 802.1Q/VLAN Tag	Assign the VLAN tag of the layer 2 QoS packets for LAN port. The default value is 0.					
Layer 2 QoS 802.1p Priority Value	Assign the priority value of the layer 2 QoS packets for LAN port. The default value is 0.					
LAN 1 / LAN 2 (when N	lethod is set to "Dual")					
Default Interface	If "Dual" is selected as "Method", users will need assign the default interface to be LAN 1 (mapped to UCM6102 WAN port) or LAN 2 (mapped to UCM6102 LAN port) then configure network settings for LAN 1/LAN 2. The default interface is LAN 2.					
IP Method	Select DHCP, Static IP, or PPPoE. The default setting is DHCP.					
IP Address	Iress Enter the IP address for static IP settings. The default setting is 192.168.0.160.					
Subnet Mask Enter the subnet mask address for static IP settings. The def 255.255.0.0.						
Gateway IP	Enter the gateway IP address for static IP settings when the port is assigned as default interface. The default setting is 0.0.0.0.					
DNS Server 1	Enter the DNS server 1 address for static IP settings. The default setting is 0.0.0.0.					
DNS Server 2	Enter the DNS server 2 address for static IP settings.					
User Name	Enter the user name to connect via PPPoE.					
Password	Enter the password to connect via PPPoE.					
Layer 2 QoS 802.1Q/VLAN Tag	Assign the VLAN tag of the layer 2 QoS packets for LAN port. The default value is 0.					
Layer 2 QoS 802.1p Priority Value	Assign the priority value of the layer 2 QoS packets for LAN port. The default value is 0.					
IPv6 Address						
WAN (when "Method" is set to "Route")						
IP Method	Select Auto or Static. The default setting is Auto					

IP Address	Enter the IP address for static IP settings.					
IP Prefixlen	Enter the Prefix length for static settings. Default is 64					
DNS Server 1	Enter the DNS server 1 address for static settings.					
DNS Server 2 Enter the DNS server 2 address for static settings.						
LAN (when Method is set to "Route")						
DHCP Server Select Disable, Auto or DHCPv6. Disable: the DHCPv6 server is disabled. Auto: Stateless address auto configuration using NDP protocol. DHCPv6: Stateful address auto configuration using DHCPv6 protocol						
DHCP Prefix	Enter DHCP prefix. (Default is 2001:db8:2:2::)					
DHCP Prefixlen	Enter the Prefix length for static settings. Default is 64					
DNS Server 1	Enter the DNS server 1 address for static settings. Default is (2001:4860:4860::8888)					
DNS Server 2	Enter the DNS server 2 address for static settings. Default is (2001:4860:4860::8844)					
Allow IP Address From	Configure starting IP address assigned by the DHCP prefix and DHCP Prefixlen.					
Allow IP Address To	Configure the ending IP address assigned by the DHCP Prefix and DHCP Prefixlen.					
Default IP Lease Time	Configure the lease time (in seconds) of the IP address.					
LAN (when Method is s	set to "Switch")					
IP Method	Select Auto or Static. The default setting is Auto					
IP Address	Enter the IP address for static IP settings.					
IP Prefixlen	Enter the Prefix length for static settings. Default is 64					
DNS Server 1	Enter the DNS server 1 address for static settings.					
DNS Server 2	Enter the DNS server 2 address for static settings.					
LAN 1 / LAN 2 (when N	lethod is set to "Dual")					
Default InterfaceUsers will need assign the default interface to be LAN 1 (mapped to UCM6 WAN port) or LAN 2 (mapped to UCM6102 LAN port) and then configure network settings for LAN 1/LAN 2. The default interface is LAN 2.						

IP Method	Select Auto or Static. The default setting is Auto
IP Address	Enter the IP address for static IP settings.
IP Prefixlen	Enter the Prefix length for static settings. Default is 64
DNS Server 1	Enter the DNS server 1 address for static settings.
DNS Server 2	Enter the DNS server 2 address for static settings.

Table 8: UCM6104 Network Settings→Basic Settings

	Table 0. Como to + Network Cettings / Dasie Cettings			
Method	 Select "Switch" or "Dual" mode on the network interface of UCM6104. The default setting is "Switch". Switch LAN 1 port interface will be used for uplink connection. LAN 2 port interface will be used as bridge for PC connection. Dual Both ports can be used for uplink connection. Users will need assign the default interface in option "Default Interface". Users will need assign LAN 1 or LAN 2 as the default interface in option "Default Interface" and configure "Gateway IP" for this interface. 			
МТО	Specifies the Maximum Transmission Unit. (By default, its 1500)			
IPv4				
Preferred DNS Server	Enter the preferred DNS server address. If Preferred DNS is used, UCM will try to use it as Primary DNS server.

DNS Server 1	Enter the DNS server 1 address for static settings.			
DNS Server 2	Enter the DNS server 2 address for static settings.			

• Method: Route

When the UCM6102 has method set to Route in network settings, WAN port interface is used for uplink connection and LAN port interface is used as a router. Please see a sample diagram below.

Figure 12: UCM6102 Network Interface Method: Route

• Method: Switch

For UCM6102, WAN port interface is used for uplink connection; LAN port interface is used as bridge for PC connection. For UCM6104, LAN 1 port interface is used for connection; LAN 2 port interface is used as bridge for PC connection.

Figure 13: UCM6102 Network Interface Method: Switch

• Method: Dual

For UCM6102, both WAN port and LAN port are used for uplink connection. For UCM6104, WAN port will be mapped to LAN 1 interface; LAN port will be mapped to LAN 2 interface. Users will need assign LAN 1 or LAN 2 as the default interface in option "Default Interface" and configure "Gateway IP" if static IP is used for this interface.

Figure 14: UCM6102 Network Interface Method: Dual

DHCP Client List

For UCM6102 that supports Route Mode, this feature can bind MAC to IP address on the LAN port. When devices receive IP addresses from UCM6102 LAN port, they will be listed on the webUI under "**System Settings**→**Network Settings**→**DHCP Client List**" as shown below.

	dc4a3e78dd25	192.16	8.2.100	Unbind	5 8

		000b829cf1e8	192.168.2.101		Unbind

Figure 17: Batch Add MAC Address Bind

After Clicking "OK" to confirm the binding, the "Bind Status" will change from "Unbind" to "Binding".

802.1X

IEEE 802.1X is an IEEE standard for port-based network access control. It provides an authentication mechanism to device before the device is allowed to access Internet or other LAN resources. The UCM6100 supports 802.1X as a supplicant/client to be authenticated. The following diagram and figure show UCM6100 uses 802.1X mode "EAP-MD5" on WAN port as client in the network to access Internet.

Figure 18: UCM6100 Using 802.1X as Client

Network Settings				
Basic Settings	DHCP Client List	802.1X Settings	Static Routes	Port Forwarding
WAN				
802.1X Mode:	EAP-MD5	~		
* Identity :	8021xxUCM6202			
* MD5 Password :				

Figure 19: UCM6100 Using 802.1X EAP-MD5

The following table shows the configuration parameters for 802.1X on UCM6100. Identity and MD5 password are required for authentication, which should be provided by the network administrator obtained from the RADIUS server. If "EAP-TLS" or "EAP-PEAPv0/MSCHAPv2" is used as the 802.1X mode, users will also need upload 802.1X CA Certificate and 802.1X Client Certificate, which should be also generated from the RADIUS server.

Table 10: UCM6100 Network Settings→802.1X

802.1X Mode	 Select 802.1X mode. The default setting is "Disable". The supported 802.1X mode are: EAP-MD5 EAP-TLS EAP-PEAPv0/MSCHAPv2 	
Identity	Enter 802.1X mode Identity information.	
MD5 Password	Enter 802.1X mode MD5 password information.	
802.1X Certificate	Select 802.1X certificate from local PC and then upload.	
802.1X Client Certificate	Select 802.1X client certificate from local PC and then upload.	

Static Routes

The UCM6100 provides users static routing capability that allows the device to use manually configured routes, rather than information only from dynamic routing or gateway configured in the UCM6100 web GUI \rightarrow **Network Settings** \rightarrow **Basic Settings** to forward traffic. It can be used to define a route when no other routes are available or necessary, or used in complementary with existing routing on the UCM6100 as a failover backup, and etc.

- Click on
 Create New IPV4 Static Route
 to create a new IPv4 static route or click on
 Create New IPv6 Static Route
 to create a new IPv6 static route. The configuration parameters are listed in the table below.
- Once added, users can select \square to edit the static route.
- Select ut to delete the static route.

Table 11: UCM6100 Network Settings→Static Routes

Destination	Configure the destination IPv4 address or the destination IPv6 subnet for the UCM6100 to reach using the static route. Example: IPv4 address - 192.168.66.4 IPv6 subnet - 2001:740:D::1/64	
Netmask	Configure the subnet mask for the above destination IPv4 address. If left bla the default value is 255.255.255.255. Example: 255.255.255.0	

Gateway	Configure the IPv4 or IPv6 gateway address so that the UCM6100 can reach the destination via this gateway. Gateway address is optional. Example: 192.168.40.5 or 2001:740:D::1
Interface	Specify the network interface on the UCM6100 to reach the destination using the static route. For UCM6102, LAN interface is eth0; WAN interface is eth1. For UCM6104, LAN1 interface is eth0; WAN interface is eth1. For UCM6108/UCM6116, only LAN interface is available.

Static routes configuration can be reset from LCD menu \rightarrow Network Menu.

The following diagram shows a sample application of static route usage on UCM6104.

Figure 20: UCM6104 Static Route Sample

The network topology of the above diagram is as below:

- Network 192.168.69.0 has IP phones registered to UCM6104 LAN 1 address
- Network 192.168.40.0 has IP phones registered to UCM6104 LAN 2 address
- Network 192.168.66.0 has IP phones registered to UCM6104 via VPN
- Network 192.168.40.0 has VPN connection established with network 192.168.66.0

In this network, by default the IP phones in network 192.168.69.0 are unable to call IP phones in network 192.168.66.0 when registered on different interfaces on the UCM6104. Therefore, we need configure a static route on the UCM6104 so that the phones in isolated networks can make calls between each other.

Create New IPV4 Static Route		
* Destination :	192.168.66.0	
Subnet Mask:	255.255.255.0	
Gateway :	192.168.40.3	
* Protocol Type:	WAN ~	

Figure 21: UCM6104 Static Route Configuration

Port Forwarding (UCM6102 only)

The UCM network interface supports router function which provides users the ability to do port forwarding. If the UCM6102 LAN mode is set to "Route" under web $GUI \rightarrow System Settings \rightarrow Network Settings$ page, port forwarding is available for configuration.

The port forwarding configuration is under web GUI \rightarrow System Settings \rightarrow Network Settings \rightarrow Port Forwarding page. Please see related settings in the table below.

Table 12: UCM6102 Network Settings→Port Forwarding		
	Specify the WAN port number or a range of WAN ports. Unlimited number of ports can be configured.	
WAN Port	Note: When it is set to a range, WAN port and LAN port must be configured with the same range, such as WAN port: 1000-1005 and LAN port: 1000-1005, and access from WAN port will be forwarded to the LAN port with the same port number, for example, WAN port 1000 will be port forwarding to LAN port 1000.	
LAN IP	Specify the LAN IP address.	

	Specify the LAN port number or a range of LAN ports.
	Note:
LAN Port	When it is set to a range, WAN port and LAN port must be configured with the same range, such as WAN port: 1000-1005 and LAN port: 1000-1005, and access from WAN port will be forwarded to the LAN port with the same port number, for example, WAN port 1000 will be port forwarding to LAN port 1000.
Protocol Type	Select protocol type "UDP Only", "TCP Only" or "TCP/UDP" for the forwarding in the selected port. The default setting is "UDP Only".

The following figures demonstrate a port forwarding example to provide phone's Web GUI access to public side.

- The UCM6102 network mode is set to "Route".
- The UCM6102 WAN port is connected to uplink switch, with a public IP address configured, e.g. 1.1.1.1.
- The UCM6102 LAN port provides DHCP pool that connects to multiple phone devices in the LAN network 192.168.2.x. The UCM6102 is used as a router, with gateway address 192.168.2.1.
- There is a GXP2160 connected under the LAN interface network of the UCM6102. It obtains IP address 192.168.2.100 from UCM6102 DHCP pool.
- On the UCM6102 Web GUI→System Settings→Network Settings→Port Forwarding, configure a port forwarding entry as the figures shows below.
 - Click on + Create New Port Forwarding

WAN Port: This is the port opened up on the WAN side for access purpose.

LAN IP: This is the GXP2160 IP address, under the LAN interface network of the UCM6102.

LAN Port: This is the port opened up on the GXP2160 side for access purpose.

Protocol Type: We select TCP here for Web GUI access using HTTP.

Create New Port Forwarding					
* WAN Port:	8088				
* LAN IP:	192.168.2.100				
* LAN Port:	8088				
* Protocol Type:	UDP Only ~

Figure 23: UCM6102 Port Forwarding Configuration

This will allow users to access the GXP2160 Web GUI from public side, by typing in the public IP address (example: 1.1.1.1:8088).

Figure 24: GXP2160 Web Access Using UCM6102 Port Forwarding

OpenVPN

Open VPN settings allow the users to configure UCM6100 to use VPN features.

Table 13: UCM6100 System Settings→OpenVPN				
Enable	Enable / Disable the OpenVPN feature.			
Server Address	Configures the hostname/IP and port of the server. For example: 192.168.1.2:22			

Server Protocol	Specify the protocol user, user should use the same settings as used on the server
Device Mode	Use the same setting as used on the server. Dev TUN: Create a routed IP tunnel. Dev TAP: Create an Ethernet tunnel.
User Compression	Compress tunnel packets using the LZO algorithm on the VPN link. Don't enable this unless it is also enabled in the server config file.
CA Cert	Upload as SSL/TLS root certificate. This file will be renamed as 'ca.crt' automatically.
Client Cert	Upload a client certificate. This file will be renamed as 'cliend.crt' automatically.
Client Key	Upload a client private key. This file will be renamed as 'client.key' automatically.

DDNS Settings

DDNS settings allows user to access UCM6100 via domain name instead of IP address. The UCM supports DDNS service from the following DDNS provider:

- dydns.org
- noip.com
- freedns.afraid.org
- zoneedit.com
- oray.net

Here is an example of using noip.com for DDNS.

1. Register domain in DDNS service provider. Please note the UCM6100 needs to have public IP access.

Hostname Inforr	nation	
Hostname:	haograndstream.ddns.net	0
Host Type:	\odot DNS Host (A) \odot DNS Host (Round Robin) \odot DNS Alias (CNAME)	0
	Port 80 Redirect Web Redirect	
IP Address:	1.2.3.4 Last Update: 2015-01-07 17:29:20 PST	0
Assign to Group:	- No Group -	0
Enable Wildcard:	Wildcards are a Plus / Enhanced feature. Upgrade Now!	0
Advanced Records:	TXT, SPF, and SRV records and the use of some special clients are Plus / Enhanced features. Upgrade now to use them.	0

Figure 26: Register Domain Name on noip.com

2. On Web GUI→System Settings→Network Settings→DDNS Settings, enable DDNS service and configure username, password and host name.

Menus	Æ	DDNS Settings	
🗥 System Status		-	
🛃 Extension / Trunk			
📞 Call Features		DDNS Server:	no-ip.com 🗸
PBX Settings		Enable DDNS :	✓
		* Username :	user_no_IP

Figure 28: Using Domain Name to Connect to UCM6100

Security Settings

The UCM6100 provides users firewall security configurations to prevent certain malicious attack to the UCM6100 system. Users could configure to allow, restrict or reject specific traffic through the device for security and bandwidth purpose. The UCM6100 also provides Fail2ban feature for authentication errors in SIP REGISTER, INVITE and SUBSCRIBE. To configure firewall settings in the UCM6100, go to Web GUI→System Settings →Security Settings page.

Static Defense

Under Web GUI→System Settings→Security Settings→Static Defense page, users will see the following information:

- Current service information with port, process and type.
- Typical firewall settings.
- Custom firewall settings.

The following table shows a sample current service status running on the UCM6100.

Port	Process	Туре	Protocol or Service
7777	Asterisk	TCP/IPv4	SIP
389	Slapd	TCP/IPv4	LDAP
2000	Asterisk	TCP/IPv4	SCCP
22	Dropbear	TCP/IPv4	SSH
80	Lighthttpd	TCP/IPv4	HTTP
8089	Lighthttpd	TCP/IPv4	HTTPS
69	Opentftpd	UDP/IPv4	TFTP
9090	Asterisk	UDP/IPv4	SIP
6060	zero_config	UDP/IPv4	UCM6100 zero_config service
5060	Asterisk	UDP/IPv4	SIP
4569	Asterisk	UDP/IPv4	SIP
5353	zero_config	UDP/IPv4	UCM6100 zero_config service
37435	Syslogd	UDP/IPv4	Syslog

Table 14: UCM6100 Firewall→Static Defense→Current Service

For typical firewall settings, users could configure the following options on the UCM6100.

Table 15: Typical Firewall Settings

Ping Defense Enable	If enabled, ICMP response will not be allowed for Ping request. The default setting is disabled. To enable or disable it, click on the check box for the LAN or WAN (UCM6100) interface.
SYN-Flood Defense Enable	 Allows the UCM6100 to handle excessive amounts of SYN packets from one source and keep the web portal accessible. There are two options available and only one of these options may be enabled at one time. eth(0)LAN defends against attacks directed to the LAN IP address of the UCM6100. eth(1)WAN defends against attacks directed to the WAN IP address of the UCM6100. SYN Flood Defense will limit the amount of SYN packets accepted by the UCM from one source to 10 packets per second. Any excess packets from that source will be discarded.
Ping-of-Death Defense Enable	Enable to prevent Ping-of-Death attack to the device. The default setting is disabled. To enable or disable it, click on the check box for the LAN or WAN (UCM6100) interface.

Under "Custom Firewall Settings", users could create new rules to accept, reject or drop certain traffic going through the UCM6100. To create new rule, click on "Create New Rule" button and a new window will pop up for users to specify rule options.

Right next to "Create New Rule" button, there is a checkbox for option "Reject Rules". If it's checked, all the rules will be rejected except the firewall rules listed below. In the firewall rules, only when there is a rule that meets all the following requirements, the option "Reject Rules" will be allowed to check:

- Action: "Accept"
- Type "In"
- Destination port is set to the system login port (e.g., by default 8089)
- Protocol is not UDP

Create New Firewall R	ule	
* Rule Name :	Reject_SSH_WAN	
* Action :	REJECT	~
* Type:	IN	~
* Interface :	WAN	~
* Service:	SSH	~

Figure 29: Create New Firewall Rule

Table 16: Firewall Rule Settings

Rule Name	Specify the Firewall rule name to identify the firewall rule.			
Action	 Select the action for the Firewall to perform. ACCEPT REJECT DROP 			
Туре	 Select the traffic type. IN If selected, users will need specify the network interface "LAN" or "WAN" (for UCM6100) for the incoming traffic. OUT 			
Service	 Select the service type. FTP SSH Telnet TFTP HTTP LDAP Custom If "Custom" is selected, users will need specify Source (IP and port), Destination (IP and port) and Protocol (TCP, UDP or Both) for the service. Please note if the source or the destination field is left blank, it will be used as "Anywhere". 			

Save the change and click on "Apply" button. Then submit the configuration by clicking on "Apply Changes" on the upper right of the web page. The new rule will be listed at the bottom of the page with sequence number, rule name, action, protocol, type, source, destination and operation. More operations below:

- Click on ^{III} to edit the rule.
- Click on to delete the rule.

Dynamic Defense

Dynamic defense is supported on the UCM6100 series. It can blacklist hosts dynamically when the LAN mode is set to "Route" under Web GUI \rightarrow System Settings \rightarrow Network Settings \rightarrow Basic Settings page. If enabled, the traffic coming into the UCM6100 can be monitored, which helps prevent massive connection attempts or brute force attacks to the device. The blacklist can be created and updated by the UCM6100 firewall, which will then be displayed in the web page. Please refer to the following table for dynamic defense options on the UCM6100.

Dynamic Defense Enable	Enable dynamic defense. The default setting is disabled.
Periodical Time Interval	Configure the dynamic defense periodic time interval (in minutes). If the number of TCP connections from a host exceeds the connection threshold within this period, this host will be added into Blacklist. The valid value is between 1 and 59 when dynamic defense is turned on. The default setting is 59.
Blacklist Update Interval	Configure the blacklist update time interval (in seconds). The default setting is 120.
Connection Threshold	Configure the connection threshold. Once the number of connections from the same host reaches the threshold, it will be added into the blacklist. The default setting is 100.
Dynamic Defense Whitelist	Allowed IPs and ports range, multiple IP addresses and port range. For example: 192.168.5.100- 192.168.5.200 1500:2000

Table 17: UCM6100 Firewall Dynamic Defense

The following figure shows a configuration example like this:

- If a host at IP address 192.168.5.7 initiates more than 20 TCP connections to the UCM6100 within 1 minute, it will be added into UCM6100 blacklist.
- This host 192.168.5.7 will be blocked by the UCM6100 for 500 seconds.

• Since IP range 192.168.5.100-192.168.5.200 is in whitelist, if a host initiates more than 20 TCP connections to the UCM6100 within 1 minute, it will not be added into UCM6100 blacklist. It can still establish TCP connection with the UCM6100.

Dynamic Defense	
Dynamic Defense Enable :	 ✓
* Periodic Time Interval (mi	1
* Blacklist Update Interval (s	5000
* Connection Threshold :	20
Dynamic Defense Whitelist :	192.168.5.100-192.168.5.200

Figure 30: Configure Dynamic Defense

Fail2ban

Fail2Ban feature on the UCM6100 provides intrusion detection and prevention for authentication errors in SIP REGISTER, INVITE and SUBSCRIBE. Once the entry is detected within "Max Retry Duration", the UCM6100 will act to forbid the host for certain period as defined in "Banned Duration". This feature helps prevent SIP brute force attacks to the PBX system.

Security Settings

SSH Access

SSH switch now is available via Web GUI and LCD. User can enable or disable SSH access directly from Web GUI or LCD screen. For web SSH access, please log in UCM6100 web interface and go to Web GUI \rightarrow System Settings \rightarrow Security Settings \rightarrow SSH Access. By default, SSH access is disabled for security concerns. It is highly recommended to only enable SSH access for debugging purpose.

Figure 32: SSH Access

LDAP Server

The UCM6100 has an embedded LDAP server for users to manage corporate phonebook in a centralized manner.

- By default, the LDAP server has generated the first phonebook with **PBX DN** "ou=pbx,dc=pbx,dc=com" based on the UCM6100 user extensions already.
- Users could add new phonebook with a different **Phonebook DN** for other external contacts. For example, "ou=people,dc=pbx,dc=com".
- All the phonebooks in the UCM6100 LDAP server have the same **Base DN** "dc=pbx,dc=com".

Term Explanation:

cn= Common Name

- ou= Organization Unit
- dc= Domain Component

These are all parts of the LDAP data Interchange Format, according to RFC 2849, which is how the LDAP tree is filtered.

If users have the Grandstream phone provisioned by the UCM6100, the LDAP directory will be set up on the phone and can be used right away for users to access all phonebooks.

Additionally, users could manually configure the LDAP client settings to manipulate the built-in LDAP server on the UCM6100. If the UCM6100 has multiple LDAP phonebooks created, in the LDAP client configuration, users could use "dc=pbx,dc=com" as Base DN to have access to all phonebooks on the UCM6100 LDAP server, or use a specific phonebook DN, for example "ou=people,dc=pbx,dc=com", to access to phonebook with Phonebook DN "ou=people,dc=pbx,dc=com " only.

UCM can also act as a LDAP client to download phonebook entries from another LDAP server. To access LDAP server and client settings, go to Web GUI**→Settings→LDAP Server**.

LDAP Server Configurations

The following figure shows the default LDAP server configurations on the UCM6100.

Figure 33: LDAP Server Configurations

The UCM6100 LDAP server supports anonymous access (read-only) by default. Therefore, the LDAP client doesn't have to configure username and password to access the phonebook directory. The "Root DN" and "Root Password" here are for LDAP management and configuration where users will need provide for authentication purpose before modifying the LDAP information.

The default phonebook list in this LDAP server can be viewed and edited by clicking on \square for the first phonebook under LDAP Phonebook.

Edit Phonebook: pbx				
+ Add Contact				
AccountNumber 🗢	CallerID Name 🗢	Options

1005		Ľ 1		

Figure 35: Default LDAP Phonebook Attributes

LDAP Phonebook

Users could use the default phonebook, edit the default phonebook, add new phonebook, import phonebook on the LDAP server as well as export phonebook from the LDAP server. The first phonebook with default phonebook dn "ou=pbx,dc=com" displayed on the LDAP server page is for extensions in this PBX. Users cannot add or delete contacts directly. The contacts information will need to be modified via Web GUI→Extension/Trunk→Extensions first. The default LDAP phonebook will then be updated automatically.

LDAP Server Configurations	LDAP Phonebook			
+ Add 💿 Phonebook DownLo	ad Configurations	S Export Selected Phonebook		
Note: The first phonebook is for extensions in this PBX. The contacts cannot be added or deleted directly. To add or delete the contacts, please modify the accounts in "Extensions" page first. To modify the read-only attributes, please edit the corresponding items in "Extension" page, and the phone book will be automatically updated when the change is saved and applied. Users can add other phonebooks for external accounts. For those phonebooks, users can edit LDAP attributes and add or delete contacts directly.				
	Phonebook DN 🔶		Options	
	ou=pbx,dc=pbx,dc=com		r i	

Figure 36: LDAP Server→LDAP Phonebook

• Add new phonebook

A new sibling phonebook of the default PBX phonebook can be added by clicking on "Add" under "LDAP Phonebook" section.

Figure 37: Add LDAP Phonebook

Configure the "Phonebook Prefix" first. The "Phonebook DN" will be automatically filled in. For example, if configuring "Phonebook Prefix" as "people", the "Phonebook DN" will be filled with "ou=people,dc=pbx,dc=com". Once added, users can select \square to edit the phonebook attributes and contact list (see figure below), or select \square to delete the phonebook.

Figure 40: Phonebook CSV File Format

The Phonebook DN field is the same "Phonebook Prefix" entry as when the user clicks on "Add" to create a new phonebook. Therefore, if the user enters "phonebook" in "Phonebook DN" field in the CSV file, the actual phonebook DN "ou=phonebook,dc=pbx,dc=com" will be automatically created by the UCM6100 once the CSV file is imported.

In the CSV file, users can specify different phonebook DN fields for different contacts. If the phonebook DN already exists on the UCM6100 LDAP Phonebook, the contacts in the CSV file will be added into the existing phonebook. If the phonebook DN doesn't exist on the UCM6100 LDAP Phonebook, a new phonebook with this phonebook DN will be created.

The sample phonebook CSV file in above picture will result in the following LDAP phonebook in the UCM6100.

Figure 41: LDAP Phonebook After Import

As the default LDAP phonebook with DN "ou=pbx,dc=pbx,dc=com" cannot be edited or deleted in LDAP phonebook section, users cannot import contacts with Phonebook DN field "pbx" if existed in the CSV file.

• Export phonebook to your computer from UCM6100 LDAP server

Select the checkbox for the LDAP phonebook and then click on "Export Selected Phonebook" to export the selected phonebook. The exported phonebook can be used as a record or a sample CSV, VFC or XML file for the users to add more contacts in it and import to the UCM6100 again.

LDAP Client Configurations

The configuration on LDAP client is useful when you use other LDAP servers. Here we provide an example on how to configure the LDAP client on the UCM.

Assuming the remote server base dn is "dc=pbx,dc=com", configure the LDAP client as follows:

- LDAP Server : Enter a name for the remote LDAP server
- Server Address : Enter the IP address or domain name for remote LDAP server.
- **Base DN:** dc=pbx,dc=com
- Username: Enter username if authentication is required
- **Password:** Enter password if authentication is required
- Filter: Enter the filter. Ex: ((CallerIDName=%)(AccountNumber=%))
- **Port:** Enter the port number. Ex:389
- LDAP Name Attributes: Enter the name attributes for remote server
- LDAP Number Attributes: Enter the number attributes for remote server

The following figure gives a sample configuration for UCM6510 acting as a LDAP client.

Phonebook Dowr	nload Configurations		Save
* LDAP Server:	LdapClient	* Server Address :	192.168.1.1
* Base DN :	dc=pbx,dc=com	User Name:	cn=admin,dc=pbx,dc=com

* Port:	389	LDAP Name Attributes:	CallerIDName Email Department Firs
* LDAP Number Attrib	outes: AccountNumber MobileNumber Hor]	

Figure 43: LDAP Client Configurations

To configure Grandstream IP phones as the LDAP clients for UCM, please refer to the following example:

- Server Address: The IP address or domain name of the UCM6510
- **Base DN:** dc=pbx,dc=com
- User Name: Please leave this field empty
- **Password:** Please leave this field empty
- LDAP Name Attribute: CallerIDName Email Department FirstName LastName
- LDAP Number Attribute: AccountNumber MobileNumber HomeNumber Fax
- LDAP Number Filter: (AccountNumber=%)
- LDAP Name Filter: (CallerIDName=%)
- LDAP Display Name: AccountNumber CallerIDName
- LDAP Version: If existed, please select LDAP Version 3
- **Port:** 389

The following figure shows the configuration information on a Grandstream GXP2170 to successfully use the LDAP server as configured in *[Figure 33: LDAP Server Configurations]*.

Time settings

Auto time updating

The current system time on the UCM6100 can be found under Web GUI \rightarrow System Status \rightarrow Dashboard \rightarrow PBX Status.

To configure the UCM6100 to update time automatically, go to Web $GUI \rightarrow System Settings \rightarrow Time Settings \rightarrow Auto Time Updating.$

⚠ _{Note:}

The configurations under Web GUI \rightarrow Settings \rightarrow Time Settings \rightarrow Auto Time Updating page require reboot to take effect. Please consider configuring auto time updating related changes when setting up the UCM6100 for the first time to avoid service interrupt after installation and deployment in production.

	Table 19: Time Auto Updating
Remote NTP Server	Specify the URL or IP address of the NTP server for the UCM6100 to synchronize the date and time. The default NTP server is ntp.ipvideotalk.com.
Enable DHCP Option 2	If set to "Yes", the UCM6100 can get provisioned for Time Zone from DHCP Option 2 in the local server automatically. The default setting is "Yes".
Enable DHCP Option 42	If set to "Yes", the UCM6100 can get provisioned for NTP Server from DHCP Option 42 in the local server automatically. This will override the manually configured NTP Server. The default setting is "Yes".
Time Zone	Select the proper time zone option so the UCM6100 can display correct time accordingly. If "Self-Defined Tome Zone" is selected, please specify the time zone parameters in "Self-Defined Time Zone" field as described in below option.
Self-Defined Time Zone	If "Self-Defined Time Zone" is selected in "Time Zone" option, users will need define their own time zone following the format below. The syntax is: std offset dst [offset], start [/time], end [/time] Default is set to: MTZ+6MDT+5,M4.1.0,M11.1.0 MTZ+6MDT+5 This indicates a time zone with 6 hours offset and 1 hour ahead for DST, which is U.S central time. If it is positive (+), the local time zone is west of the Prime Meridian (A.K.A: International or Greenwich Meridian); If it is negative (-), the local time zone is east. M4.1.0,M11.1.0 The 1st number indicates Month: 1,2,3, 12 (for Jan, Feb,, Dec).

The 2nd nu	umber indicates the nth iteration of the weekday: (1st Sunday,
3rd Tuesda	y). Normally 1, 2, 3, 4 are used. If 5 is used, it means the last
iteration of	the weekday.
The 3rd	number indicates weekday: 0,1,2,,6 (for Sun, Mon,
Tues, ,S	at).
Therefore,	this example is the DST which starts from the First Sunday of
April to the	1st Sunday of November.

Set Time Manually

To manually set the time on the UCM6100, go to Web GUI \rightarrow System Settings \rightarrow Time Settings \rightarrow Set Time Manually. The format is YYYY-MM-DD HH:MM:SS.

Time Settings					Save
Auto Time Updating	Set Time Manually	NTP Server	Office Time	Holiday	
Current Time :	Please select time				

Figure 45: Set Time Manually

▲ Note:

Manually setup time will take effect immediately after saving and applying change in the Web GUI. If users would like to reboot the UCM6100 and keep the manually setup time setting, please make sure "Remote NTP Server", "Enable DHCP Option 2" and "Enable DHCP Option 42" options under Web $GUI \rightarrow Settings \rightarrow Time$ Settings $\rightarrow Auto Time Updating$ page are unchecked or set to empty. Otherwise, time auto updating settings in this page will take effect after reboot.

NTP Server

The UCM6100 can be used as a NTP server for the NTP clients to synchronize their time with. To configure the UCM6100 as the NTP server, set "Enable NTP server" to "Yes" under Web GUI \rightarrow System Settings \rightarrow Time Settings \rightarrow NTP Server. On the client side, point the NTP server address to the UCM6100 IP address or host name to use the UCM6100 as the NTP server.

Office Time

On the UCM6100, the system administrator can define "office time", which can be used to configure time condition for extension call forwarding schedule and inbound rule schedule. To configure office time, go to Web $GUI \rightarrow System Settings \rightarrow Time Settings \rightarrow Office Time$. Click on "Create New Office Time" to create an office time.

Email Settings

Email settings

The Email application on the UCM6100 can be used to send out alert event Emails, Fax (Fax-To-Email), Voicemail (Voicemail-To-Email) etc. The configuration parameters can be accessed via Web GUI→System Settings→Email Settings→Email Settings.

	Table 22: Email Settings
TLS Enable	Enable or disable TLS during transferring/submitting your Email to another SMTP server. The default setting is "Yes".
Туре	 Select Email type. MTA: Mail Transfer Agent. The Email will be sent from the configured domain. When MTA is selected, there is no need to set up SMTP server for it or no user login is required. However, the Emails sent from MTA might be considered as spam by the target SMTP server. Client: Submit Emails to the SMTP server. A SMTP server is required and users need login with correct credentials.
Domain	Specify the domain name to be used in the Email when using type "MTA".
Server	Specify the SMTP server when using type "Client".
Username	Username is required when using type "Client". Normally it's the Email address.
Password	Password to login for the above Username (Email address) is required when using type "Client".
	Enable or Disable Email-to-Fax feature.
	If enabled, the UCM will monitor the configured email inbox (using provided [Username] and [Password]) for emails with the subject "SendFaxMail To XXX" . Example : SendFaxMail To 7200
Enable Email-to-Fax	The UCM will extract the attachments of detected emails and send it to the XXX extension by fax.
	The attachment must be in PDF/TIF/TIFF format.
	Note: This field will appear when using Type "Client".

POP/POP3 Server Address	Configure the POP/POP3 server address for the configured username Example: pop.gmail.com
POP/POP3 Server Port	Configure the POP/POP3 server port for the configured username Example: 995
Display Name	Specify the display name in the FROM header in the Email.
Sender	Specify the sender's Email address. For example: pbx@example.mycompany.com.

The following figure shows a sample Email setting on the UCM6100, assuming the Email is using *192.168.6.202* as the SMTP server.

PROVISIONING

Overview

Grandstream SIP Devices can be configured via Web interface as well as via configuration file through TFTP/HTTP/HTTPS download. All Grandstream SIP devices support a proprietary binary format configuration file and XML format configuration file. The UCM6100 provides a Plug and Play mechanism to auto-provision the Grandstream SIP devices in a zero-configuration manner by generating XML config file and having the phone to download it within LAN area. This allows users to finish the installation with ease and start using the SIP devices in a managed way.

To provision a phone, three steps are involved, i.e., discovery, configuration and provisioning. This section explains how Zero Config works on the UCM6100. The settings for this feature can be accessed via Web GUI**→Value-added Features→Zero Config**.

Configuration Architecture for End Point Device

Started from firmware version 1.0.7.10, the end point device configuration in zero config is divided into the following three layers with priority from the lowest to the highest:

Global

This is the lowest layer. Users can configure the most basic options that could apply to all Grandstream SIP devices during provisioning via Zero config.

• Model

In this layer, users can define model-specific options for the configuration template.

• Device

This is the highest layer. Users can configure device-specific options for the configuration for individual device here.

Each layer also has its own structure in different levels. Please see figure below. The details for each layer are explained in sections **[Global configuration]**, **[Model configuration]** and **[Device Configuration]**.

Device Layer	Special Settings	
	Advanced Settings	
	Basic Settings	
ModelLayer	Model Templates	
ModerLayer	Default Model Templates	
Global Layer	Global Templates	
,	Global Policy	

Figure 55: Zero Config Configuration Architecture for End Point Device

The configuration options in model layer and device layer have all the option in global layers already, i.e., the options in global layer is a subset of the options in model layer and device layer. If an option is set in all three layers with different values, the highest layer value will override the value in lower layer. For example, if the user selects English for Language setting in Global Policy and Spanish for Language setting in Default Model Template, the language setting on the device to be provisioned will use Spanish as model layer has higher priority than global layer. To sum up, **configurations in higher layer will always override the configurations for the same options/fields in the lower layer when presented at the same time.**

After understanding the zero-config configuration architecture, users could configure the available options for end point devices to be provisioned by the UCM6100 by going through the three layers. This configuration architecture allows users to set up and manage the Grandstream end point devices in the same LAN area in a centralized way.

Auto Provisioning Settings

By default, the Zero Config feature is enabled on the UCM6100 for auto provisioning. Three methods of auto provisioning are used.

Figure 56: UCM6100 Zero Config

• SIP SUBSCRIBE

When the phone boots up, it sends out SUBSCRIBE to a multicast IP address in the LAN. The UCM6100 discovers it and then sends a NOTIFY with the XML config file URL in the message body. The phone will then use the path to download the config file generated in the UCM6100 and take the new configuration.

• DHCP OPTION 66

Route mode need to be set to use this feature. When the phone restarts (by default DHCP Option 66 is turned on), it will send out a DHCP DISCOVER request. The UCM6100 receives it and returns DHCP OFFER with the config server path URL in Option 66, for example, https://192.168.2.1:8089/zccgi/. The phone will then use the path to download the config file generated in the UCM6100.

• mDNS

When the phone boots up, it sends out mDNS query to get the TFTP server address. The UCM6100 will respond with its own address. The phone will then send TFTP request to download the XML config file from the UCM6100.

To start the auto provisioning process, under Web GUI \rightarrow Value-added Features \rightarrow Zero Config \rightarrow Zero Config Settings, fill in the auto provision information.

Zero Config					
Zero Config	Global Policy	Global Templates	Model Templates	Model Update	Zero Config Settings

Subnet	Whitelist: 10.1.1.0)/24 ⊕			
	Save				

Figure 57: Auto Provision Settings

Table 24: Auto Provision Settings

Enable Zero Config	Enable or disable the zero-config feature on the PBX. The default setting is enabled.
Enable Automatic Configuration Assignment	By default, this is disabled. If disabled, when SIP device boots up, the UCM6100 will not send the SIP device the URL to download the config file and therefore the SIP device will not be automatically provisioned by the UCM6100. Note: When disabled, SIP devices can still be provisioned by manually sending NOTIFY from the UCM6100 which will include the XML config file URL for the SIP device to download.
Automatically Assign Extension	If enabled, when the device is discovered, the PBX will automatically assign an extension within the range defined in "Zero Config Extension Segment" to the device. The default setting is disabled.

Zero Config Extension Segment	Click on the link "Zero Config Extension Segment" to specify the extension range to be assigned if "Automatically Assign Extension" is enabled. The default range is 5000-6299. Zero Config Extension Segment range can be defined in Web GUI→ PBX Settings→General Settings→General page→Extension Preference section: "Auto Provision Extensions".
Enable Pick Extension	If enabled, the extension list will be sent out to the device after receiving the device's request. This feature is for the GXP series phones that support selecting extension to be provisioned via phone's LCD. The default setting is disabled.
Pick Extension Segment	Click on the link "Pick Extension Segment" to specify the extension list to be sent to the device. The default range is 4000 to 4999. Pick Extension Segment range can be defined in Web GUI →PBX Settings→General Settings→General page→Extension Preference section: "Pick Extensions".
Pick Extension Period (hour)	Specify the number of minutes to allow the phones being provisioned to pick extensions.
Subnet Whitelist	This feature allows the UCM to provision devices in different subnets other than UCM network. Enter subnets IP addresses to allow devices within these subnets to be provisioned. The syntax is <i><ip>/<cidr></cidr></ip></i> . <u>Examples</u> : 10.0.0.1/8 192.168.6.0/24 Note: Only private IP ranges (10.0.0.0 172.16.0.0 192.168.0.0) are supported.

Please make sure an extension is manually assigned to the phone or "Automatically Assign Extension" is enabled during provisioning. After the configuration on the UCM6100 Web GUI, click on "Save" and "Apply Changes". Once the phone boots up and picks up the config file from the UCM6100, it will take the configuration right away.

Discovery

Grandstream endpoints are automatically discovered after bootup. Users could also manually discover device by specifying the IP address or scanning the entire LAN network. Three methods are supported to scan the devices.

- PING
- ARP
- SIP Message (NOTIFY)

Click on "Auto Discover" under Web GUI \rightarrow Value-added Features \rightarrow Zero Config \rightarrow Zero Config, fill in the "Scan Method" and "Scan IP". The IP address segment will be automatically filled in based on the network mask detected on the UCM6100. If users need scan the entire network segment, enter 255 (for example, 192.168.40.255) instead of a specific IP address. Then click on "Save" to start discovering the devices within the same network. To successfully discover the devices, "Zero Config" needs to be enabled on the UCM6100 Web GUI \rightarrow Value-added Features \rightarrow Zero Config \rightarrow Auto Provisioning Settings.

Auto Discover		×
The PBX can automatically d entire network segment or a	iscover the new devices by ARP or PING. It can scan the single IP address.	
PBX LAN/LAN1 Address:	192.168.2.1	
Network Segment :	192.168.2.0 - 192.168.2.255	
Broadcast IP :	192.168.2.255	
Scan Method :	SIP-Message 🗸	
Scan IP :	192.168.6.137	
	Cancel	

Figure 58: Auto Discover

The following figure shows a list of discovered phones. The MAC address, IP Address, Extension (if assigned), Version, Vendor, Model, Connection Status, Create Config, Options (Edit /Delete /Update /Reboot /Access Device WebGUI) are displayed in the list.

MAC Address 🛊	IP Address \$	Extension	Version 🛊	Vendor \$	Model 🛊	Create Config \$	Options
0008825C6926	192.168.2.104		1.0.9.17	GRANDSTREAM	GXP2160		🗹 🛅 📣 🖱 🧭

Figure 59: Discovered Devices

Uploading Devices List

Besides the built-in discovery method on the UCM, users could prepare a list of devices on .CSV file and upload

it by clicking on the button Choose File to Upload, after which a success message prompt should be displayed.

Users need to make sure that the CSV file respects the format as shown on the following figure and that the entered information is correct (valid IP address, valid MAC address, device model ..etc), otherwise the UCM will reject the file and the operation will fail:

1	mac	model	ip	version
2	000b8227fb7a	GXV3240	192.168.2.103	1.0.3.132

Figure 60: Device list - CSV file sample

Managing discovered devices:

- **Sorting:** Press ▲ or ▼ to sort per MAC Address, IP Address, Version, Vendor, Model or Create Config columns from lower to higher or higher to lower respectively.
 - Filter: All

to display corresponding results.

- All: Display all discovered devices.
- Scan Results: Display only manually discovered devices. [Discovery]
- IP Address: Enter device IP and press Search button.
- MAC Address: Enter device MAC and press Search button.
- Model: Enter a model name and press Search button. Example: GXP2130.

Figure 61: Managing Discovered Devices

From the main menu of zero config, users can perform the following operations:

- Click on Auto Discover in order to access to the discovery menu as shown on [Discovery] section.
- Click on
 Create New Device
 to add a new device to zero config database using its MAC address.
- Click on
 Delete Selected Devices
 to delete selected devices from the zero-config database.
- Click on Modify Selected Devices to modify selected devices.
- Click on Update Selected Devices to batch update a list of devices, the UCM on this case will send SIP NOTIFY message to all selected devices in order to update them at once.
- Click on Reboot Selected Devices to reboot selected devices (the selected devices, should have been provisioned with extensions since the phone will authenticate the server which is trying to send it reboot command).
- Click on Reset All Extensions to clear all devices configurations.
- Click on Choose File to Upload to upload CSV file containing list of devices.
- Click on Copy Device Setting to copy configuration from one device to another. This can be useful for easily replace devices and note that this feature works only between devices of same model.

All these operations will be detailed on the next sections.

Global configuration

Global policy

Global configuration will apply to all the connected Grandstream SIP end point devices in the same LAN with the UCM6100 no matter what the Grandstream device model it is. It is divided into two levels:

- Web GUI→Value-added Features→Zero Config→Global Policy
- Web GUI→Value-added Features→Zero Config→Global Templates.
- **Global Templates** configuration has higher priority to **Global Policy** configuration.

Global Policy can be accessed in Web GUI \rightarrow Value-added Features \rightarrow Zero Config \rightarrow Global Policy page. On the top of the configuration table, users can select category in the "Options" dropdown list to quickly navigate to the category. The categories are:

• Localization: configure display language, data and time.

- **Phone Settings**: configure dial plan, call features, NAT, call progress tones and etc.
- Contact List: configure LDAP and XML phonebook download.
- Maintenance: configure upgrading, web access, Telnet/SSH access and syslog.
- Network Settings: configure IP address, QoS and STUN settings.
- Customization: customize LCD screen wallpaper for the supported models.
- Communication Settings: configure Email and FTP settings

Select the checkbox on the left of the parameter you would like to configure to activate the dropdown list for this parameter.

Zero Config						
Zero Config	Global Policy	Global Templates	Model Templates	Model Update	Zero Config Settings

> Communicatio	n Settings					

Figure 62: Global Policy Categories

The following tables list the Global Policy configuration parameters for the SIP end device.

Table 25: Global Policy Parameters – Localization

Language settings	
Language	Select the LCD display language on the SIP end device.
Date and Time	
Date Format	Configure the date display format on the SIP end device's LCD.
Time Format	Configure the time display in 12-hour or 24-hour format on the SIP end device's LCD.
NTP Server	Configure the URL or IP address of the NTP server. The SIP end device may obtain the date and time from the server.
Time Zone	Configure the time zone used on the SIP end device.

Table 26: Global Polic	y Parameters – Phone Settings
------------------------	-------------------------------

Default Call Settings	
Dial Plan	Configure the default dial plan rule. For syntax and examples, please refer to user manual of the SIP devices to be provisioned for more details.
Enable Call Features	When enabled, "Do Not Disturb", "Call Forward" and other call features can be used via the local feature code on the phone. Otherwise, the ITSP feature code will be used.
Use # as Dial Key	If set to "Yes", pressing the number key "#" will immediately dial out the input digits.
Auto Answer by Call-info	If set to "Yes", the phone will automatically turn on the speaker phone to answer incoming calls after a short reminding beep, based on the SIP Call-Info header sent from the server/proxy. The default setting is enabled.
NAT Traversal	Configure if NAT traversal mechanism is activated.
User Random Port	If set to "Yes", this parameter will force random generation of both the local SIP and RTP ports.
General Settings	
Call Progress Tones	 Configure call progress tones including ring tone, dial tone, second dial tone, message waiting tone, ring back tone, call waiting tone, busy tone and reorder tone using the following syntax: f1=val, f2=val[, c=on1/ off1[- on2/ off2[- on3/ off3]]]; Frequencies are in Hz and cadence on and off are in 10ms). "on" is the period (in ms) of ringing while "off" is the period of silence. Up to three cadences are supported. Please refer to user manual of the SIP devices to be provisioned for more details
HEADSET Key Mode	Select "Default Mode" or "Toggle Headset/Speaker" for the Headset key. Please refer to user manual of the SIP devices to be provisioned for more details.

Table 27: Global Policy Parameters – Contact List

LDAP Phonebook	
Source	 Select "Manual" or "PBX" as the LDAP configuration source. If "Manual" is selected, the LDAP configuration below will be applied to the SIP end device. If "PBX" is selected, the LDAP configuration built-in from UCM6100 Web GUI→System Settings→LDAP Server will be applied.
Address	Configure the IP address or DNS name of the LDAP server.

Port	Configure the LDAP server port. The default value is 389.
FUIL	
Base DN	 This is the location in the directory where the search is requested to begin. Example: dc=grandstream, dc=com ou=Boston, dc=grandstream, dc=com
User Name	Configure the bind "Username" for querying LDAP servers. The field can be left blank if the LDAP server allows anonymous binds.
Password	Configure the bind "Password" for querying LDAP servers. The field can be left blank if the LDAP server allows anonymous binds.
Number Filter	Configure the filter used for number lookups. Please refer to user manual for more details.
Name Filter	Configure the filter used for name lookups. Please refer to user manual for more details.
Version	Select the protocol version for the phone to send the bind requests. The default value is 3.
Name Attribute	 Specify the "name" attributes of each record which are returned in the LDAP search result. Example: gn cn sn description
Number Attribute	 Specify the "number" attributes of each record which are returned in the LDAP search result. Example: telephoneNumber telephoneNumber Mobile
Display Name	Configure the entry information to be shown on phone's LCD. Up to 3 fields can be displayed. Example: • %cn %sn %telephoneNumber
Max Hits	Specify the maximum number of results to be returned by the LDAP server. Valid range is 1 to 3000. The default value is 50.
Search Timeout	Specify the interval (in seconds) for the server to process the request and client waits for server to return. Valid range is 0 to 180. Default value is 30.
Sort Results	Specify whether the searching result is sorted or not. Default setting is No.
Incoming Calls	Configure to enable LDAP number searching when receiving calls. The
	default setting is No.

Lookup Display Name	Configures the display name when LDAP looks up the name for incoming call or outgoing call. It must be a subset of the LDAP Name Attributes.
XML Phonebook	
Phonebook XML Server	 Select the source of the phonebook XML server. Disable Disable phonebook XML downloading. Manual Once selected, users need specify downloading protocol HTTP, HTTPS or TFTP and the server path to download the phonebook XML file. The server path could be IP address or URL, with up to 256 characters. Local UCM Server Once selected, click on the Server Path field to upload the phonebook XML file. Please note: after uploading the phonebook XML file to the server, the original file name will be used as the directory name and the file will be renamed as phonebook.xml under that directory.
Phonebook Download Interval	Configure the phonebook download interval (in Minute). If set to 0, automatic download will be disabled. Valid range is 5 to 720.
Remove manually-edited entries on download	If set to "Yes", when XML phonebook is downloaded, the entries added manually will be automatically removed.

Table 28: Global Policy Parameters – Maintenance

Upgrade and Provision	
	Firmware source via ZeroConfig provisioning could a URL for external server address, local UCM directory or USB media if plugged in to the UCM6100.
	Select a source to get the firmware file:
Firmware Source	• URL If select to use URL to upgrade, complete the configuration for the following four parameters: "Upgrade Via", "Server Path", "File Prefix" and "File Postfix".
	• Local UCM Server Firmware can be uploaded to the UCM6100 internal storage for firmware upgrade. If selected, click on "Manage Storage" icon next to "Directory" option, upload firmware file and select directory for the end
	device to retrieve the firmware file.

	 Local USB Media If selected, the USB storage device needs to be plugged into the UCM6100 and the firmware file must be put under a folder named "ZC_firmware" in the USB storage root directory. Local SD Card Media If selected, an SD card needs to be plugged into the UCM6100 and the firmware file must be put under a folder named "ZC_firmware" in the USB storage root directory.
Upgrade via	When URL is selected as firmware source, configure upgrade via TFTP, HTTP or HTTPS.
Server Path	When URL is selected as firmware source, configure the firmware upgrading server path.
File Prefix	When URL is selected as firmware source, configure the firmware file prefix. If configured, only the firmware with the matching encrypted prefix will be downloaded and flashed into the phone, if URL is selected as firmware source.
File Postfix	When URL is selected as firmware source, configure the firmware file postfix. If configured, only the configuration file with the matching encrypted postfix will be downloaded and flashed into the phone.
Allow DHCP Option 43/66	If DHCP option 43 or 66 is enabled on the LAN side, the TFTP server can be redirected.
Automatic Upgrade	 If enabled, the end point device will automatically upgrade if a new firmware is detected. Users can select automatic upgrading by day, by week or by minute. By week Once selected, specify the day of the week to check HTTP/TFTP server for firmware upgrades or configuration files changes. By day Once selected, specify the hour of the day to check the HTTP/TFTP server for firmware upgrades or configuration files changes. By minute Once selected, specify the hour of the day to check the HTTP/TFTP server for firmware upgrades or configuration files changes. By minute Once selected, specify the interval X that the SIP end device will request for new firmware every X minutes.
Firmware Upgrade Rule	Specify how firmware upgrading and provisioning request to be sent.
Web Access	
Admin Password	Configure the administrator password for admin level login.
End-User Password	Configure the end-user password for the end user level login.
Web Access Mode	Select HTTP or HTTPS as the web access protocol.

Web Server Port	Configure the port for web access. The valid range is 1 to 65535.		
Security			
Disable Telnet/SSH	Enable Telnet/SSH access for the SIP end device. If the SIP end device supports Telnet access, this option controls the Telnet access of the device; if the SIP end device supports SSH access, this option controls the SSH access of the device.		
Syslog			
Syslog Server	Configure the URL/IP address for the syslog server.		
Syslog Level	Select the level of logging for syslog.		
Send SIP Log	Configure whether the SIP log will be included in the syslog message.		

Table 29: Global Policy Parameters – Network Settings

Basic Settings			
	Configure how the SIP end device shall obtain the IP address. DHCP or PPPoE can be selected.		
IP Address	• DHCP Once selected, users can specify the Host Name (option 12) of the SIP end device as DHCP client, and Vendor Class ID (option 60) used by the client and server to exchange vendor class ID information.		
	• PPPoE Once selected, users need specify the Account ID, Password and Service Name for PPPoE.		
Advanced Setting			
Layer 3 QoS	Define the Layer 3 QoS parameter. This value is used for IP Precedence, Diff-Serv or MPLS. Valid range is 0-63.		
Layer 2 QoS Tag	Assign the VLAN Tag of the Layer 2 QoS packets. Valid range is 0 -4095.		
Layer 2 QoS Priority Value	Assign the priority value of the Layer 2 QoS packets. Valid range is 0-7.		
STUN Server	Configure the IP address or Domain name of the STUN server. Only non- symmetric NAT routers work with STUN.		
Keep Alive Interval	Specify how often the phone will send a blank UDP packet to the SIP server in order to keep the "ping hole" on the NAT router to open. Valid range is 10-160.		

Table 30: Global Policy Parameters – Customization

Wallpaper	
Wanpaper	
	Check this option if the SIP end device shall use 1024 x 600 resolution for the LCD screen wallpaper.
Screen Resolution 1024 x 600	 Source Configure the location where wallpapers are stored. File If "URL" is selected as source, specify the URL of the wallpaper file. If "Local UCM Server" is selected as source, click to upload wallpaper file to the UCM6100.
	Check this option if the SIP end device shall use 800 x 400 resolution for the LCD screen wallpaper.
Screen Resolution 800 x 400	 Source Configure the location where wallpapers are stored. File If "URL" is selected as source, specify the URL of the wallpaper file. If "Local UCM Server" is selected as source, click to upload wallpaper file to the UCM6100.
	Check this option if the SIP end device shall use 480 x 272 resolution for the LCD screen wallpaper.
Screen Resolution 480 x 272	 Source Configure the location where wallpapers are stored. File If "URL" is selected as source, specify the URL of the wallpaper file. If "Local UCM Server" is selected as source, click to upload wallpaper file to the UCM6100.
	Check this option if the SIP end device supports 320 x 240 resolution for the LCD screen wallpaper.
Screen Resolution 320 x 240	 Source Configure the location where wallpapers are stored. File If "URL" is selected as source, specify the URL of the wallpaper file. If "Local UCM Server" is selected as source, click to upload wallpaper file to the UCM6100.

Email Settings Check this option to configure the email settings that will be sent to the provisioned phones: Server IP address of the SMTP server Port SMTP server port From E-Mail address Email address Sender User Name **SMTP Settings** User name of the sender Password Recovery Email Email where recovered password will be sent Alarm receive Email 1 Email address where alarms notifications will be sent Alarm receive Email 1 Email address where alarms notifications will be sent Enable SSL Enable SSL protocol for SMTP FTP Check this option to configure the FTP settings that will be sent to the provisioned phones: Storage Server Type Either FTP or Central Storage Server FTP server address FTP Port FTP port to be used **User Name** FTP user name Path

FTP Directory path

Global Templates

Global Templates can be accessed in Web GUI \rightarrow Value-added Features \rightarrow Zero Config \rightarrow Global Templates. Users can create multiple global templates with different sets of configurations and save the templates. Later on, when the user configures the device in Edit Device dialog \rightarrow Advanced Settings, the user can select to use one of the global template for the device. Please refer to section *[Manage Devices]* for more details on using the global templates.

When creating global template, users can select the categories and the parameters under each category to be used in the template. The global policy and the selected global template will both take effect when generating the config file. However, the selected global template has higher priority to the global policy when it comes to the same setting option/field. If the same option/field has different value configured in the global policy and the selected global template, the value for this option/field in the selected global template will override the value in global policy.

Click on "Create New Template" to add a global template. Users will see the following configurations.

Table 32: Create New Template

Template Name	Create a name to identify this global template.		
Description	Provide a description for the global template. This is optional.		
Active	Check this option to enable the global template.		

• Click on 🖾 to edit the global template.

The window for editing global template is shown in the following figure. In the "Options" field, after entering the option name key word, the options containing the key word will be listed. Users could then select the options to be modified and click on "Add Option" to add it into the global template.

Edit Global Templates: Bra	nch	Save
* Template Name:	Branch	
Description :	branch office phones provision tem	
Active:		
Options Phone	Settings Add Option	
Phone Settings		
Default Call Settings	3	
Dial Plan:	{ x+ *x+ *xx*x+ }	
Enable Call Feature	es: Ves 💌	
Use # as Dial Key:	Yes 💌	
Auto Answer by Ca	all-Info: No 💌	

Figure 63: Edit Global Template

The added options will show in the list. Users can then enter or select value for each option to be used in the global template. On the left side of each added option, users can click on \boxtimes to remove this option from the template. On the right of each option, users can click on \bigcirc to reset the option value to the default value.

Click on "Save" to save this global template.

- The created global templates will show in the Web GUI→Value-added Features→Zero Config→Global
 Templates page. Users can click on ¹ to delete the global template or click on "Delete Selected Templates" to delete multiple selected templates at once.
- Click on "Toggle Selected Template(s)" to toggle the status between enabled/disabled for the selected templates.

Model configuration

Model templates

Model layer configuration allows users to apply model-specific configurations to different devices. Users could create/edit/delete a model template by accessing Web GUI, page Value-added Features \rightarrow Zero Config \rightarrow Model Templates. If multiple model templates are created and enabled, when the user configures the device in Edit Device dialog \rightarrow Advanced Settings, the user can select to use one of the model template for the device. Please refer to section [Manage Devices] for more details on using the model template.

For each created model template, users can assign it as default model template. If assigned as default model template, the values in this model template will be applied to all the devices of this model. There is always only one default model template that can be assigned at one time on the UCM6100.

The selected model template and the default model template will both take effect when generating the config file for the device. However, the model template has higher priority to default model template when it comes to the same setting option/field. If the same option/field has different value configured in the default model template and the selected model template, the value for this option/field in the selected model template will override the value in default model template.

• Click on "Create New Template" to add a model template.

Model	Select a model to apply this template. The supported Grandstream models are listed in the dropdown list for selection.
Template Name	Create a name for the model template.
Description	Enter a description for the model template. This is optional.
Default Model Template	Select to assign this model template as the default model template. The value of the option in default model template will be overridden if other selected model template has a different value for the same option.
Active	Check this option to enable the model template.

Table 33: Create New Model Template

• Click on \square to edit the model template.

The editing window for model template is shown in the following figure. In the "Options" field, enter the option name key word, the option that contains the key word will be listed. User could then select the option and click on "Add Option" to add it into the model template.

Once added, the option will be shown in the list below. On the left side of each option, users can click on to remove this option from the model template. On the right side of each option, users can click on to reset the option to the default value.

User could also click on "Add New Field" to add a P value number and the value to the configuration. The following figure shows setting P value "P1362" to "en", which means the display language on the LCD is set to English. For P value information of different models, please refer to configuration template here <u>http://www.grandstream.com/support/tools.</u>

Figure 64: Edit Model Template

• Click on Save when done. The model template will be displayed on Web GUI→Value-added Features→Zero Config→Model Templates page.

- Click on to delete the model template or click on "Delete Selected Templates" to delete multiple selected templates at once.
- Click on "Toggle Selected Template(s)" to toggle the status between enabled/disabled for the selected model templates.

Model Update

UCM6100 zero config feature supports provisioning all models of Grandstream SIP end devices. Templates for most of the Grandstream models are built in with the UCM6100 already. Templates for GS Wave and Grandstream surveillance products require users to download and install under Web GUI**→Value-added Features→Zero Config→Model Update** first before they are available in the UCM6100 for selection. After downloading and installing the model template to the UCM6100, it will show in the dropdown list for "Model" selection when editing the model template.

- Click on 📥 to download the template.
- Click on (•) to upgrade the model template. Users will see this icon available if the device model has template updated in the UCM6100.

Model Template Package List

Figure 65: Template Management

In case the UCM6100 is placed in the private network and Internet access is restricted, users will not be able to get packages by downloading and installing from the remote server. Model template package can be manually uploaded from local device through Web GUI. Please contact Grandstream customer support if the model package is needed for manual uploading.

Device Configuration

On Web GUI, page Value-added Features \rightarrow Zero Config \rightarrow Zero Config, users could create new device, delete existing device(s), make special configuration for a single device, or send NOTIFY to existing device(s).

Create New Device

Besides configuring the device after the device is discovered, users could also directly create a new device and configure basic settings before the device is discovered by the UCM6100. Once the device is plugged in, it can then be discovered and provisioned. This gives the system administrator adequate time to set up each device beforehand.

Click on "Create New Device" and the following dialog will show. Follow the steps below to create the configurations for the new device.

- 1. Firstly, select a model for the device to be created and enter its MAC address, IP address and firmware version (optional) in the corresponding field.
- 2. Basic settings will show a list of settings based on the model selected in step 1. Users could assign extensions to accounts, assign functions to Line Keys and Multiple-Purposed Keys if supported on the selected model.
- 3. Click on "Create New Device" to save the configuration for this device.

Figure 69: Edit Device

A preview of the "Advanced" settings is shown in the above figure. There are five levels configurations as described in (1) (2) (3) (4) (5) below, with priority from the lowest to the highest. The configurations in all levels will take effect for the device. If there are same options existing in different level configurations with different value configured, the higher level configuration will override the lower level configuration.

(1) Global Policy

This is the lowest level configuration. The global policy configured in Web GUI→Value-added Features→Zero Config→Global Policy will be applied here. Clicking on "Modify Global Policy" to redirect to page Value-added Features→Zero Config→Global Policy.

(2) Global Templates

Select a global template to be used for the device and click on + Add to add. Multiple global templates

can be selected and users can arrange the priority by adjusting orders via \frown and \checkmark . All the selected global templates will take effect. If the same option exists on multiple selected global templates, the value in the template with higher priority will override the one in the template with lower priority. Click on $\overline{\square}$ to remove the global template from the selected list.

(3) Default Model Template

Default Model Template will be applied to the devices of this model. Default model template can be configured in model template under Web GUI→Value-added Features→Zero Config→Model Templates page. Please see default model template option in [Table 33: Create New Model Template].

(4) Model Templates

Select a model template to be used for the device and click on + Add to add. Multiple global templates

can be selected and users can arrange the priority by adjusting orders via \checkmark and \checkmark . All the selected model templates will take effect. If the same option exists on multiple selected model templates, the value in the template with higher priority will override the one in the template with lower priority. Click on $\boxed{10}$ to remove the model template from the selected list.

(5) <u>Customize Device Settings</u>

This is the highest level configuration for the device. Click on "Modify Customize Device Settings" and following dialog will show.

Figure 74: Device List in Zero Config

In this web page, users can also click on "Reset All Extensions" to reset the extensions of all the devices.

Sample Application

Assuming in a small business office where there are 8 GXP2140 phones used by customer support and 1 GXV3275 phone used by customer support supervisor. 3 of the 8 customer support members speak Spanish and the rest speak English. We could deploy the following configurations to provisioning the office phones for the customer support team.

- 1. Go to Web GUI→Value-added Features→Zero Config→Zero Config Settings, select "Enable Zero Config".
- 2. Go to Web GUI**→Value-added Features→Zero Config→Global Policy**, configure Date Format, Time Format and Firmware Source as follows.

Localization		
Language Settings		
Language:	English	T
Date and Time		
☑ Date Format:	mm-dd-yyyy	
☑ Time Format:	24-hour Clock	v

Figure 75: Zero Config Sample - Global Policy

- 3. Go to Web GUI→Value-added Features→Zero Config→Model Templates, create a new model template "English Support Template" for GXP2140. Add option "Language" and set it to "English". Then select the option "Default Model Template" to make it the default model template.
- Go to Web GUI→Value-added Features→Zero Config→Model Templates, create another model template "Spanish Support Template" for GXP2140. Add option "Language" and set it to "Español".

- After 9 devices are powered up and connected to the LAN network, use "Auto Discover" function or "Create New Device" function to add the devices to the device list on Web GUI→Value-added Features→Zero Config→Zero Config.
- 6. On Web GUI→Value-added Features→Zero Config→Zero Config page, users could identify the devices

by their MAC addresses or IP addresses displayed on the list. Click on \square to edit the device settings.

7. For each of the 5 phones used by English speaking customer support, in "Basic" settings select an available extension for account 1 and click on "Save". Then click on "Advanced" settings tab to bring up the following dialog. Users will see the English support template is applied since this is the default model template. A preview of the device settings will be listed on the right side.

Figure 78: Zero Config Sample - Device Preview 3

- 10. Click on "Apply Changes" to apply saved changes.
- 11. On the Web GUI→Value-added Features→Zero Config→Zero Config page, click on [△] to send NOTIFY to trigger the device to download config file from UCM6100.

Now all the 9 phones in the network will be provisioned with an unique extension registered on the UCM6100. 3 of the phones will be provisioned to display Spanish on LCD and the other 5 will be provisioned to display English on LCD. The GXV3275 used by the supervisor will be provisioned to use the default language on LCD display since it's not specified in the global policy.

EXTENSIONS

Create New User

Create New SIP Extension

To manually create new SIP user, go to Web GUI**→Extension/Trunk→Extensions**. Click on "Add" and a new dialog window will show for users to fill in the extension information.

Extension options are divided into four categories:

- Basic Settings
- Media
- Features
- Specific Time

• Follow me

Select first which type of extension: SIP Extension, IAX Extension or FXS Extension. The configuration parameters are as follows.

General	
Extension	The extension number associated with the user.
CallerID Number	Configure the CallerID Number that would be applied for outbound calls from this user. Note: The ability to manipulate your outbound Caller ID may be limited by your VoIP provider.
Permission	Assign permission level to the user. The available permissions are "Internal", "Local", "National" and "International" from the lowest level to the highest level. The default setting is "Internal". Note: Users need to have the same level as or higher level than an outbound rule's privilege to make outbound calls using this rule.
SIP/IAX Password	Configure the password for the user. A random secure password will be automatically generated. It is recommended to use this password for security purpose.
Auth ID	Configure the authentication ID for the user. If not configured, the extension number will be used for authentication.
Voicemail	 Configure Voicemail. There are three valid options and the default option is "Enable Local Voicemail". Disable Voicemail: Disable Voicemail. Enable Local Voicemail: Enable voicemail for the user. Enable Remote Voicemail: Forward the notify message from remote voicemail system for the user, and the local voicemail will be disabled. Note: Remote voicemail feature is used only for Infomatec (Brazil).
Voicemail Password	Configure voicemail password (digits only) for the user to access the voicemail box. A random numeric password is automatically generated. It is recommended to use the random generated password for security purpose.
Skip Voicemail Password Verification	When user dials voicemail code, the password verification IVR is skipped. If enabled, this would allow one-button voicemail access. By default, this option is disabled.
Send Voicemail to Email	 Allows users to send voicemail recording as .wav file attachment to specified email addresses. Default setting is "No". Note: When set to "Default", the global settings in Call Features → Voicemail → Voicemail Email Settings will be used.
Keep Voicemail	Whether to keep the local voicemail recording after sending them. If set to "Default",

Table 34: SIP Extension Configuration Parameters→Basic Settings

after Emailing	the global settings will be used. Note : When set to "Default", the global settings in Call Features \rightarrow Voicemail \rightarrow Voicemail Email Settings will be used.
Enable Keep-alive	If enabled, empty SDP packet will be sent to the SIP server periodically to keep the NAT port open. The default setting is "Yes".
Keep-alive Frequency	Configure the Keep-alive interval (in seconds) to check if the host is up. The default setting is 60 seconds.
Disable This Extension	If selected, this extension will be disabled on the UCM6100. Note: The disabled extension still exists on the PBX but can't be used on the end device.
User Settings	
First Name	Configure the first name of the user. The first name can contain characters, letters, digits and
Last Name	Configure the last name of the user. The last name can contain characters, letters, digits and
Email Address	Fill in the Email address for the user. Voicemail will be sent to this Email address.
User Password	Configure the password for user portal access. A random numeric password is automatically generated. It is recommended to use the randomly generated password for security purpose.
Language	Select the voice prompt language to be used for this extension. The default setting is "Default" which is the selected voice prompt language under Web $GUI \rightarrow PBX$ Settings \rightarrow Voice Prompt \rightarrow Language Settings. The dropdown list shows all the current available voice prompt languages on the UCM6100. To add more languages in the list, please download voice prompt package by selecting "Check Prompt List" under Web GUI \rightarrow PBX Settings \rightarrow Voice Prompt \rightarrow Language Settings.
Concurrent Registrations	The maximum endpoints which can be registered into this extension. For security concerns, the default value is 1.
Mobile Phone Number	Configure the phone number for the extension, user can type the related star code for phone number followed by the extension number to call directly this number. Example: user can type *88 1000 to call the mobile number associated with extension 1000.

Table 35: SIP Extension Configuration Parameters→Media

SIP Settings	
NAT	Use NAT when the UCM6100 is on a public IP communicating with devices hidden
	behind NAT (e.g., broadband router). If there is one-way audio issue, usually it's
	related to NAT configuration or Firewall's support of SIP and RTP ports. The default
	setting is enabled.

Can Direct Media	By default, the UCM6100 will route the media steams from SIP endpoints through itself. If enabled, the PBX will attempt to negotiate with the endpoints to route the media stream directly. It is not always possible for the UCM6100 to negotiate endpoint-to-endpoint media routing. The default setting is "No".
DTMF Mode	Select DTMF mode for the user to send DTMF. The default setting is "RFC2833". If "Info" is selected, SIP INFO message will be used. If "Inband" is selected, 64-kbit PCMU and PCMA are required. When "Auto" is selected, RFC2833 will be used if offered, otherwise "Inband" will be used.
TEL URI	If the phone has an assigned PSTN telephone number, this field should be set to "User=Phone". "User=Phone" parameter will be attached to the Request-Line and "TO" header in the SIP request to indicate the E.164 number. If set to "Enable", "Tel" will be used instead of "SIP" in the SIP request.
Alert-Info	When present in an INVITE request, the alert-Info header field specifies and alternative ring tone to the UAS.
Enable T.38 UDPTL	Enable or disable T.38 UDPTL support.
SRTP	Enable SRTP for the call. The default setting is disabled.
	 Select Fax mode. The default setting is "None". None: Disable Fax. Fax Detect: Fax signal from the user/trunk during the call can be detected and the received Fax will be sent to the Email address configured for this extension. If no Email address can be found for the user, the Fax will be sent to the default Email address configured in Fax setting page under Web GUI→Call Features→Fax/T.38.
Fax To Email	 Yes – Allow Fax to Email for this extension. Faxes will be sent to the user's email address configured in the extension's <i>Basic Settings</i>. No – Do not send any faxes to the user's email address configured in the extension's <i>Basic Settings</i>.
Strategy	 This option controls how the extension can be used on devices within different types of network. The default setting is "Allow All". Allow All Device in any network can register this extension. Local Subnet Only Only the user in specific subnet can register this extension. Up to three subnet addresses can be specified. A Specific IP Address Only the device on the specific IP address can register this extension.
	Select audio and video codec for the extension. The available codecs are: PCMU, PCMA, GSM, AAL2-G.726-32, G,726, G.722, G.729, G.723, iLBC, ADPCM, H.264,

	Table 36: SIP Extension Configuration Parameters → Features
Call Transfer	
Presence Status	Select which presence status to set for the extension and configure call forward conditions for each status. Six possible options are possible: "Available", "Away", "Chat", "Custom", "DND" and "Unavailable". More details at [PRESENCE].
Call Forward Unconditional	 Enable and configure the Call Forward Unconditional target number. Available options for target number are: "None": Call forward deactivated. "Extension": Select an extension from dropdown list as CFU target. "Custom Number": Enter a customer number as target. For example: *97. "Voicemail": Select an extension from dropdown list. Incoming calls will be forwarded to voicemail of selected extension. "Ring Group": Select a ring group from dropdown list as CFU target. "Queues": Select a queue from dropdown list as CFU target. "Voicemail Group": Select a voicemail group from dropdown list as CFU target.
CFU Time Condition	 Select time condition for Call Forward Unconditional. CFU takes effect only during the selected time condition. The available time conditions are "Office Time", "Out of Office Time", "Out of Holiday", "Out of Office Time or Holiday" and "Specific". Note: "Specific" has higher priority to "Office Times" if there is a conflict in terms of time period. Specific time can be configured on the bottom of the extension configuration dialog. Scroll down the add Time Condition for specific time. Office Time and Holiday could be configured on page System Settings→Time Settings→Office Time/Holiday page.
Call Forward No Answer	 Configure the Call Forward No Answer target number. Available options for target number are: "None": Call forward deactivated. "Extension": Select an extension from dropdown list as CFN target. "Custom Number": Enter a customer number as target. For example: *97. "Voicemail": Select an extension from dropdown list. Incoming calls will be forwarded to voicemail of selected extension. "Ring Group": Select a ring group from dropdown list as CFN target. "Queues": Select a queue from dropdown list as CFN target. "Voicemail Group": Select a voicemail group from dropdown list as CFN target.

Table 36: SIP Extension Configuration Parameters→Features

	Select time condition for Call Forward No Answer. The available time conditions are "Office Time", "Out of Office Time", "Holiday", "Out of Holiday", "Out of Office Time or Holiday" and "Specific".
CFN Time Condition	 Notes: "Specific" has higher priority to "Office Times" if there is a conflict in terms of time period. Specific time can be configured on the bottom of the extension configuration dialog. Scroll down the add Time Condition for specific time. Office Time and Holiday could be configured on page System Settings→Time Settings→Office Time/Holiday page.
Call Forward Busy	 Configure the Call Forward Busy target number. Available options for target number are: "None": Call forward deactivated. "Extension": Select an extension from dropdown list as CFB target. "Custom Number": Enter a customer number as target. For example: *97. "Voicemail": Select an extension from dropdown list. Incoming calls will be forwarded to voicemail of selected extension. "Ring Group": Select a ring group from dropdown list as CFB target. "Queues": Select a queue from dropdown list as CFB target. "Voicemail Group": Select a voicemail group from dropdown list as CFB target.
CFB Time Condition	 Select time condition for Call Forward Busy. The available time conditions are "Office Time", "Out of Office Time", "Holiday", "Out of Holiday", "Out of Office Time or Holiday" and "Specific". Notes: "Specific" has higher priority to "Office Times" if there is a conflict in terms of time period. Specific time can be configured on the bottom of the extension configuration dialog. Scroll down the add Time Condition for specific time. Office Time and Holiday could be configured on page System Settings→Time Settings→Office Time/Holiday page.
Do Not Disturb	If enabled the extension will ignore all incoming calls
DND Time Condition	Select time condition for Do Not Disturb. The available time conditions are "Office Time", "Out of Office Time", "Holiday", "Out of Holiday", "Out of Office Time or Holiday" and "Specific".
	• "Specific" has higher priority to "Office Times" if there is a conflict in terms of time period.

	 Specific time can be configured on the bottom of the extension configuration dialog. Scroll down the add Time Condition for specific time. Office Time and Holiday could be configured on page System Settings→Time Settings→Office Time/Holiday page.
DND Whitelist	If DND is enabled, all calls to this extension will be rejected except the numbers listed on this list. Note: The maximum number on the Whitelist is 10.
FWD Whitelist	If call forward is enabled, all calls to this extension will be forwarded except the calls coming from the specified numbers on this list. Note: The Maximum number on the whitelist is 10.
CC Settings	
Enable CC	If enabled, UCM6100 will automatically alert this extension when a called party is available, given that a previous call to that party failed for some reason. By default, it's disabled.
CC Mode	 Two modes for Call Completion are supported: Normal: This extension is used as ordinary extension. For Trunk: This extension is registered from a PBX. The default setting is "Normal".
CC Max Agents	Configure the maximum number of CCSS agents which may be allocated for this channel. In other words, this number serves as the maximum number of CC requests this channel can make. The minimum value is 1.
CC Max Monitors	Configure the maximum number of monitor structures which may be created for this device. In other words, this number tells how many callers may request CC services for a specific device at one time. The minimum value is 1.
Ring Simultaneously	y
Ring Simultaneously	Enable this option to have an external number ring simultaneously along with the extension. If a register trunk is used for outbound, the register number will be used to be displayed for the external number as caller ID number.
External Number	Set the external number to be rang simultaneously. '-' is the connection character which will be ignored. This field accepts only letters, numbers, and special characters + = * #.

Time Condition for Ring Simultaneously	Ring the external number simultaneously along with the extension on the basis of this time condition.
Use callee DOD on FWD or Ring Simultaneously	Use the DOD number when calls are being diverted/forwarded to external destinations or when ring simultaneous is configured.
Monitor privilege co	ntrol
Allowed to call-barging	Add members from "Available Extensions" to "Selected Extensions" so that the selected extensions can spy on the used extension using feature code.
Seamless transfer p	rivilege control
Allowed to seamless transfer	Any extensions on the UCM can perform seamless transfer. When using Pickup Incall feature, only extensions available on the "Selected Extensions" list can perform seamless transfer to the edited extension.
Other Settings	
Ring Timeout	Configure the number of seconds to ring the user before the call is forwarded to voicemail (voicemail is enabled) or hang up (voicemail is disabled). If not specified, the default ring timeout is 60 seconds on the UCM6100, which can be configured in the global ring timeout setting under Web GUI→PBX Settings→Voice Prompt→Custom Prompt: General Preference. The valid range is between 5 seconds and 600 seconds. Note: If the end point also has a ring timeout configured, the actual ring timeout used is the shortest time set by either device.
Auto Record	Enable automatic recording for the calls using this extension. The default setting is disabled. The recordings can be accessed under Web $GUI \rightarrow CDR \rightarrow Recording Files$.
Skip Trunk Auth	 If set to "yes", users can skip entering the password when making outbound calls. If set to "By Time", users can skip entering the password when making outbound calls during the selected time condition. If set to "No", users will be asked to enter the password when making outbound calls.
Time Condition for Skip Trunk Auth	If 'Skip Trunk Auth' is set to 'By Time', select a time condition during which users can skip entering password when making outbound calls.
Dial Trunk Password	Configure personal password when making outbound calls via trunk.
Support Hot- Desking Mode	If enabled, SIP Password will accept only alphabet characters and digits. Auth ID will be changed to the same as Extension.
Enable LDAP	If enabled, the extension will be added to LDAP Phonebook PBX list.
Enable WebRTC Support	Enable registration and call from WebRTC.

Music On Hold	Specify which Music On Hold class to suggest to the bridged channel when putting them on hold.
Call Duration Limit	The maximum duration of call-blocking.
Maximum Call Duration	The maximum call duration (in seconds). The default value 0 means no limit.
Custom Call-info for Auto Answer	If enabled, when a call is sent to this extension from UCM, the SIP INVITE message will contain a Call-info header indicating auto answer.
Enable Call Waiting	If disabled, UCM won't invite the extension when it's already in a call, and will do the same work as the user is busy. Note: the option only works when the caller dials the extension directly.

Table 37: SIP Extension Configuration Parameters→Specific Time

Specific Time	
Time Condition	Click to add Time Condition to configure specific time for this extension.

Create New IAX Extension

The UCM6100 supports Inter-Asterisk eXchange (IAX) protocol. IAX is used for transporting VoIP telephony sessions between servers and terminal devices. IAX is like SIP but also has its own characteristic. For more information, please refer to RFC 5465.

To manually create new IAX user, go to Web GUI**→Extension/Trunk→Extensions**. Click on "Add" and a new dialog window will show for users which need to make sure first to select the extension type to be IAX Extension before proceeding to fill in the extension information. The configuration parameters are as follows.

General	
Extension	The extension number associated with the user.
CallerID Number	Configure the CallerID Number that would be applied for outbound calls from this user. Note: The ability to manipulate your outbound Caller ID may be limited by your VoIP provider.
Permission	Assign permission level to the user. The available permissions are "Internal", "Local", "National" and "International" from the lowest level to the highest level. The default setting is "Internal". Note: Users need to have the same level as or higher level than an outbound rule's privilege to make outbound calls using this rule.

Table 38: IAX Extension Configuration Parameters→Basic Settings

Configure the password for the user. A random secure password will be automatically generated. It is recommended to use this password for security purpose.
 Configure Voicemail. There are three valid options and the default option is "Enable Local Voicemail". Disable Voicemail: Disable Voicemail. Enable Local Voicemail: Enable voicemail for the user.
Configure voicemail password (digits only) for the user to access the voicemail box. A random numeric password is automatically generated. It is recommended to use the random generated password for security purpose.
When user dials voicemail code, the password verification IVR is skipped. If enabled, this would allow one-button voicemail access. By default, this option is disabled.
If selected, this extension will be disabled on the UCM6100. Note: The disabled extension still exists on the PBX but can't be used on the end device.
Configure the first name of the user. The first name can contain characters, letters, digits and
Configure the last name of the user. The last name can contain characters, letters, digits and
Fill in the Email address for the user. Voicemail will be sent to this Email address.
Configure the password for user portal access. A random numeric password is automatically generated. It is recommended to use the randomly generated password for security purpose.
Select the voice prompt language to be used for this extension. The default setting is "Default" which is the selected voice prompt language under Web GUI \rightarrow PBX Settings \rightarrow Voice Prompt \rightarrow Language Settings. The dropdown list shows all the current available voice prompt languages on the UCM6100. To add more languages in the list, please download voice prompt package by selecting "Check Prompt List" under Web GUI \rightarrow PBX Settings \rightarrow Voice Prompt \rightarrow Language Settings.

Table 39: IAX Extension Configuration Parameters→Media

IAX Settings	
Max Number of Calls	Configure the maximum number of calls allowed for each remote IP address.
Require Call Token	Configure to enable/disable requiring call token. If set to "Auto", it might lock out users who depend on backward compatibility when peer authentication credentials are shared between physical endpoints. The default setting is "Yes".
SRTP	Enable SRTP for the call. The default setting is disabled.

Fax Mode	 Select Fax Mode. The default setting is "None". None: Disable Fax. This is the default setting. Fax Detect: Fax signal from the user/trunk during the call can be detected and the received Fax will be sent to the Email address configured for this extension. If no Email address can be found for the user, the Fax will be sent to the default Email address configured in Fax setting page under Web GUI→Call Features→Fax/T.38.
Strategy	 This option controls how the extension can be used on devices within different types of network. Allow All Device in any network can register this extension. Local Subnet Only Only the user in specific subnet can register this extension. Up to three subnet addresses can be specified. A Specific IP Address Only the device on the specific IP address can register this extension. The default setting is "Allow All".
Codec Preference	Select audio and video codec for the extension. The available codecs are: PCMU, PCMA, GSM, AAL2-G.726-32, G,726, G.722, G.729, G.723, iLBC, ADPCM, H.264, H.265, H.263, H.263p, RTX and VP8.

Table 40: IAX Extension Configuration Parameters→Features

Call Transfer	
Call Forward Unconditional	Configure the Call Forward Unconditional target number. If not configured, the Call Forward Unconditional feature is deactivated. The default setting is deactivated.
CFU Time Condition	 Select time condition for Call Forward Unconditional. CFU takes effect only during the selected time condition. The available time conditions are "Office Time", "Out of Office Time", "Out of Holiday", "Out of Office Time or Holiday" and "Specific". Note: "Specific" has higher priority to "Office Times" if there is a conflict in terms of time period. Specific time can be configured on the bottom of the extension configuration dialog. Scroll down the add Time Condition for specific time. Office Time and Holiday could be configured on page System Settings → Time Settings → Office Time/Holiday page.
Call Forward No	Configure the Call Forward No Answer target number. If not configured, the Call
Answer	Forward No Answer feature is deactivated. The default setting is deactivated.

CFN Time Condition	 Select time condition for Call Forward No Answer. The available time conditions are "Office Time", "Out of Office Time", "Holiday", "Out of Holiday", "Out of Office Time or Holiday" and "Specific". Notes: "Specific" has higher priority to "Office Times" if there is a conflict in terms of time period. Specific time can be configured on the bottom of the extension configuration dialog. Scroll down the add Time Condition for specific time. Office Time and Holiday could be configured on page System Settings→Time Settings→Office Time/Holiday page.
Call Forward Busy	Configure the Call Forward Busy target number. If not configured, the Call Forward Busy feature is deactivated. The default setting is deactivated.
CFB Time Condition	 Select time condition for Call Forward Busy. The available time conditions are "Office Time", "Out of Office Time", "Holiday", "Out of Holiday", "Out of Office Time or Holiday" and "Specific". Notes: "Specific" has higher priority to "Office Times" if there is a conflict in terms of time period. Specific time can be configured on the bottom of the extension configuration dialog. Scroll down the add Time Condition for specific time. Office Time and Holiday could be configured on page System Settings→Time Settings→Office Time/Holiday page.
Ring Simultaneousl	y
Ring Simultaneously	Enable this option to have an external number ring simultaneously along with the extension. If a register trunk is used for outbound, the register number will be used to be displayed for the external number as caller ID number.
External Number	Set the external number to be rang simultaneously. '-' is the connection character which will be ignored.
Time Condition for Ring Simultaneously	Ring the external number simultaneously along with the extension on the basis of this time condition.
Ring	

Auto Record	Enable automatic recording for the calls using this extension. The default setting is disabled. The recording files can be accessed under Web $GUI \rightarrow CDR \rightarrow Recording$ Files.
Skip Trunk Auth	 If set to "Yes", users can skip entering the password when making outbound calls. If set to "By Time", users can skip entering the password when making outbound calls during the selected time condition. If set to "No", users will be asked to enter the password when making outbound calls.
Time Condition for	If "Skip Trunk Auth" is set to "By Time", select a time condition during which users can
Skip Trunk Auth	skip entering password when making outbound calls.
Dial Trunk Password	Configure personal password when making outbound calls via trunk.
Enable LDAP	If enabled, the extension will be added to LDAP Phonebook PBX lists.
Music On Hold	Configure the Music On Hold class to suggest to the bridged channel when putting them on hold.
Call Duration Limit	The maximum duration of call-blocking.

Table 41: IAX Extension Configuration Parameters→Specific Time

Specific Time	
Time Condition	Click to add Time Condition to configure specific time for this extension.

Create New FXS Extension

The UCM6100 supports Foreign eXchange Subscriber (FXS) interface. FXS is used when user needs to connect analog phone lines or FAX machines to the UCM6100.

To manually create new FXS user, go to Web GUI→**Extension/Trunk**→**Extensions**. Click on "Add" and a new dialog window will show for users which need to make sure first to select the extension type to be FXS Extension before proceeding to fill in the extension information. The configuration parameters are as follows.

General	
Extension	The extension number associated with the user.
Analog Station	Select the FXS port to be assigned for this extension.
Caller ID Number	Configure the CallerID Number that would be applied for outbound calls from this user. Note: The ability to manipulate your outbound Caller ID may be limited by your VoIP provider.

Table 42: FXS Extension Configuration Parameters→Basic Settings

Permission	Assign permission level to the user. The available permissions are "Internal", "Local", "National" and "International" from the lowest level to the highest level. The default setting is "Internal". Note: Users need to have the same level as or higher level than an outbound rule's privilege to make outbound calls using this rule.
Voicemail	 Configure Voicemail. There are three valid options and the default option is "Enable Local Voicemail". Disable Voicemail: Disable Voicemail. Enable Local Voicemail: Enable voicemail for the user.
Voicemail Password	Configure voicemail password (digits only) for the user to access the voicemail box. A random numeric password is automatically generated. It is recommended to use the random generated password for security purpose.
Skip Voicemail Password Verification	When user dials voicemail code, the password verification IVR is skipped. If enabled, this would allow one-button voicemail access. By default, this option is disabled.
Disable This Extension	If selected, this extension will be disabled on the UCM6100. Note: The disabled extension still exists on the PBX but can't be used on the end device.
User Settings	
First Name	Configure the first name of the user. The first name can contain characters, letters, digits and
Last Name	Configure the last name of the user. The last name can contain characters, letters, digits and
Email Address	Fill in the Email address for the user. Voicemail will be sent to this Email address.
User Password	Configure the password for user portal access. A random numeric password is automatically generated. It is recommended to use the randomly generated password for security purpose.
Language	Select the voice prompt language to be used for this extension. The default setting is "Default" which is the selected voice prompt language under Web $GUI \rightarrow PBX$ Settings \rightarrow Voice Prompt \rightarrow Language Settings. The dropdown list shows all the current available voice prompt languages on the UCM6100. To add more languages

	Table 43: FXS Extension Configuration Parameters -> Media
Analog Settings	
Call Waiting	Configure to enable/disable call waiting feature. The default setting is "No".
User '#' as SEND	If configured, the # key can be used as SNED key after dialing the number on the analog phone. The default setting is "Yes".
RX Gain	Configure the RX gain for the receiving channel of analog FXS port. The valid range is -30dB to +6dB. The default setting is 0.
TX Gain	Configure the TX gain for the transmitting channel of analog FXS port. The valid range is -30dB to +6dB. The default setting is 0.
MIN RX Flash	Configure the minimum period of time (in milliseconds) that the hook-flash must remain unpressed for the PBX to consider the event as a valid flash event. The valid range is 30ms to 1000ms. The default setting is 200ms.
MAX RX Flash	Configure the maximum period of time (in milliseconds) that the hook-flash must remain unpressed for the PBX to consider the event as a valid flash event. The minimum period of time is 256ms and it can't be modified. The default setting is 1250ms.
Enable Polarity Reversal	If enabled, a polarity reversal will be marked as received when an outgoing call is answered by the remote party. For some countries, a polarity reversal is used for signaling the disconnection of a phone line and the call will be considered as Hangup on a polarity reversal. The default setting is "Yes".
Echo Cancellation	Specify "ON", "OFF" or a value (the power of 2) from 32 to 1024 as the number of taps of cancellation. Note: When configuring the number of taps, the number 256 is not translated into 256ms of echo cancellation. Instead, 256 taps mean 256/8 = 32 ms. The default setting is "ON", which is 128 taps.
3-Way Calling	Configure to enable/disable 3-way calling feature on the user. The default setting is enabled.
Send CallerID After	Configure the number of rings before sending CID. Default setting is 1.
Fax Mode	 For FXS extension, there are three options available in Fax Mode. The default setting is "None". None: Disable Fax. Fax Detect: Fax signal from the user/trunk during the call can be detected and the received Fax will be sent to the Email address configured for this extension. If no Email address can be found for the user, the Fax will be sent to the default Email address configured in Fax setting page under Web GUI→Call Features→Fax/T.38. Fax Gateway: If selected, the UCM6100 can support conversation and processing of Fax data from T.30 to T.38 or T.38 to T.30. only for FXS ports.

	Table 44: FXS Extension Configuration Parameters→Features
Call Transfer	
Call Forward Unconditional	Configure the Call Forward Unconditional target number. If not configured, the Call Forward Unconditional feature is deactivated. The default setting is deactivated.
CFU Time Condition	 Select time condition for Call Forward Unconditional. CFU takes effect only during the selected time condition. The available time conditions are "Office Time", "Out of Office Time", "Out of Holiday", "Out of Office Time or Holiday" and "Specific". Note: "Specific" has higher priority to "Office Times" if there is a conflict in terms of time period. Specific time can be configured on the bottom of the extension configuration dialog. Scroll down the add Time Condition for specific time. Office Time and Holiday could be configured on page System Settings→Time Settings→Office Time/Holiday page.
Call Forward No Answer	Configure the Call Forward No Answer target number. If not configured, the Call Forward No Answer feature is deactivated. The default setting is deactivated.
CFN Time Condition	 Select time condition for Call Forward No Answer. The available time conditions are "Office Time", "Out of Office Time", "Holiday", "Out of Holiday", "Out of Office Time or Holiday" and "Specific". Notes: "Specific" has higher priority to "Office Times" if there is a conflict in terms of time period. Specific time can be configured on the bottom of the extension configuration dialog. Scroll down the add Time Condition for specific time. Office Time and Holiday could be configured on page System Settings→Time Settings→Office Time/Holiday page.
Call Forward Busy	Configure the Call Forward Busy target number. If not configured, the Call Forward Busy feature is deactivated. The default setting is deactivated.
CFB Time Condition	 Select time condition for Call Forward Busy. The available time conditions are "Office Time", "Out of Office Time", "Holiday", "Out of Holiday", "Out of Office Time or Holiday" and "Specific". Notes: "Specific" has higher priority to "Office Times" if there is a conflict in terms of time period. Specific time can be configured on the bottom of the extension configuration dialog. Scroll down the add Time Condition for specific time.
	• Office Time and Holiday could be configured on page System Settings→Time Settings→Office Time/Holiday page.

CC Settings	
Enable CC	If enabled, UCM6100 will automatically alert this extension when a called party is available, given that a previous call to that party failed for some reason.
Ring Simultaneous	у
Ring Simultaneously	Enable this option to have an external number ring simultaneously along with the extension. If a register trunk is used for outbound, the register number will be used to be displayed for the external number as caller ID number.
External Number	Set the external number to be rang simultaneously. '-' is the connection character which will be ignored.
Time Condition for Ring Simultaneously	Ring the external number simultaneously along with the extension on the basis of this time condition.
Hotline	
Enable Hotline	If enabled, hotline dialing plan will be activated, a pre-configured number will be used according to the selected Hotline Type.
Hotline Number	Configure the Hotline Number
Hotline Type	 Configure the Hotline Type: Immediate Hotline: When the phone is off-hook, UCM6100 will immediately dial the preset number Delay Hotline: When the phone is off-hook, if there is no dialing within 5 seconds, UCM6100 will dial the preset number.
Other Settings	
Ring Timeout	Configure the number of seconds to ring the user before the call is forwarded to voicemail (voicemail is enabled) or hang up (voicemail is disabled). If not specified, the default ring timeout is 60 seconds on the UCM6100, which can be configured in the global ring timeout setting under Web GUI→PBX Settings→Voice Prompt→Custom Prompt: General Preference. The valid range is between 5 seconds and 600 seconds. Note: If the end point also has a ring timeout configured, the actual ring timeout used is the shortest time set by either device.
Auto Record	Enable automatic recording for the calls using this extension. The default setting is disabled. The recording files can be accessed under Web $GUI \rightarrow CDR \rightarrow Recording$ Files.

Skip Trunk Auth	 If set to "Yes", users can skip entering the password when making outbound calls. If set to "By Time", users can skip entering the password when making outbound calls during the selected time condition. If set to "No", users will be asked to enter the password when making outbound calls.
Time Condition for	If "Skip Trunk Auth" is set to "By Time", select a time condition during which users can
Skip Trunk Auth	skip entering password when making outbound calls.
Dial Trunk Password	Configure personal password when making outbound calls via trunk.
Enable LDAP	If enabled, this extension will be added to LDAP Phonebook PBX list; if disabled, this extension will be skipped when creating LDAP Phonebook.
Music On Hold	Select which Music On Hold class to suggest to extension when putting the active call on hold.
Call Duration Limit	Configure the maximum duration of call-blocking.

Table 45: FXS Extension Configuration Parameters→Specific Time

Specific Time	
Time Condition	Click to add Time Condition to configure specific time for this extension.

Batch Add Extensions

Batch Add SIP Extensions

To add multiple SIP extensions, BATCH add can be used to create standardized SIP extension accounts. However, unique extension user name can't be set using BATCH add.

Under Web GUI→**Extension/Trunk**→**Extensions**, click on "Add" and select extension type as SIP extension, and "add method" as Batch.

General	
Start Extension	Configure the starting extension number of the batch of extensions to be added.
Create Number	Specify the number of extensions to be added. The default setting is 5.
Extension Incrementation	Specify the interval between extensions as preferred when creating a batch of extension.
Permission	Assign permission level to the user. The available permissions are "Internal", "Local", "National" and "International" from the lowest level to the highest level. The default setting is "Internal". Note: Users need to have the same level as or higher level than an outbound rule's privilege to make outbound calls from this rule.

Table 46: Batch Add SIP Extension Parameters

Voicemail	 Configure Voicemail. There are three valid options and the default option is "Enable Local Voicemail". Disable Voicemail: Disable Voicemail. Enable Local Voicemail: Enable voicemail for the user. Enable Remote Voicemail: Forward the notify message from remote voicemail system for the user, and the local voicemail will be disabled. Note: Remote voicemail feature is used only for Infomatec (Brazil).
Enable WebRTC Support	Enable WebRTC support.
SIP/IAX Password	 Configure the SIP/IAX password for the users. Three options are available to create password for the batch of extensions. User Random Password. A random secure password will be automatically generated. It is recommended to use this password for security purpose. Use Extension as Password. Enter a password to be used on all the extensions in the batch.
Voicemail Password	 Configure Voicemail password (digits only) for the users. User Random Password. A random password in digits will be automatically generated. It is recommended to use this password for security purpose. Use Extension as Password. Enter a password to be used on all the extensions in the batch.
CallerID Number	 Configure CallerID Number when adding Batch Extensions. Use Extension as Number Users can choose to use the extension number as CallerID Use as Number Users can choose to set a specific number instead of using the extension number.
Ring Timeout	Configure the number of seconds to ring the user before the call is forwarded to voicemail (voicemail is enabled) or hang up (voicemail is disabled). If not specified, the default ring timeout is 60 seconds on the UCM6100, which can be configured in the global ring timeout setting under Web GUI→PBX Settings→Voice Prompt→Custom Prompt: General Preference. The valid range is between 5 seconds and 600 seconds. Note: If the end point also has a ring timeout configured, the actual ring timeout used is the shortest time set by either device.
Auto Record	Enable automatic recording for the calls using this extension. The default setting is disabled. The recording files can be accessed under Web $GUI \rightarrow CDR \rightarrow Recording$ Files.

Skip Voicemail Password Verification	When user dials voicemail code, the password verification IVR is skipped. If enabled, this would allow one-button voicemail access. By default, this option is disabled.
Music On Hold	Select which Music On Hold class to suggest to extensions when putting them on hold.
Enable LDAP	If enabled, the batch added extensions will be added to LDAP Phonebook PBX list; if disabled, the batch added extensions will be skipped when creating LDAP Phonebook.
Enable WebRTC Support	If enabled, extensions will be able to login to user portal and use Web RTC features.
Call Duration Limit	Configure the maximum duration of call-blocking.
SIP Settings	
NAT	Use NAT when the PBX is on a public IP communicating with devices hidden behind NAT (e.g., broadband router). If there is one-way audio issue, usually it's related to NAT configuration or Firewall's support of SIP and RTP ports. The default setting is enabled.
Can Direct Media	By default, the PBX will route the media steams from SIP endpoints through itself. If enabled, the PBX will attempt to negotiate with the endpoints to route the media stream directly. It is not always possible for the PBX to negotiate endpoint-to-endpoint media routing. The default setting is "No".
DTMF Mode	Select DTMF mode for the user to send DTMF. The default setting is "RFC2833". If "Info" is selected, SIP INFO message will be used. If "Inband" is selected, 64-kbit codec PCMU and PCMA are required. When "Auto" is selected, RFC2833 will be used if offered, otherwise "Inband" will be used.
Enable Keep-alive	If enabled, empty SDP packet will be sent to the SIP server periodically to keep the NAT port open. The default setting is "Yes".
Keep-alive Frequency	Configure the number of seconds for the host to be up for Keep-alive. The default setting is 60 seconds.
TEL URI	If the end device/phone has an assigned PSTN telephone number, this field should be set to "User=Phone". Then a "User=Phone" parameter will be attached to the Request-Line and TO header in the SIP request to indicate the E.164 number. If set to "Enable", "Tel:" will be used instead of "SIP:" in the SIP request. The default setting is disabled.

Concurrent Registrations	The maximum endpoints which can be registered into this extension. For security concerns, the default value is 1.
Other Settings	
SRTP	Enable SRTP for the call. The default setting is "No".
Fax Mode	 Select Fax mode for this user. The default setting is "None". None: Disable Fax. Fax Detect: Fax signal from the user/trunk during the call can be detected and the received Fax will be sent to the Email address configured for this extension. If no Email address can be found for the user, the Fax will be sent to the default Email address configured in Fax setting page under Web GUI→Call Features→Fax/T.38.
Strategy	 This option controls how the extension can be used on devices within different types of network. The default setting is "Allow All". Allow All Device in any network can register this extension. Local Subnet Only Only the user in specific subnet can register this extension. Up to three subnet addresses can be specified. A Specific IP Address Only the device on the specific IP address can register this extension.
Enable T.38 UDPTL	Enable or disable T.38 UDPTL Support.
Skip Trunk Auth	If enable "All", users do not need to enter password when making an outbound call. If enable "Follow Me", the user can dial out via follow me without password.
Codec Preference	Select audio and video codec for the extension. The available codecs are: PCMU, PCMA, GSM, AAL2-G.726-32, G.722, G.729, G.723, iLBC, ADPCM, LPC10, H.264, H.265, H.263, H.263p and VP8.

Batch Add IAX Extensions

Under Web GUI \rightarrow Extension/Trunk \rightarrow Extensions, click on "Add", then select extension type as IAX Extension and the add method to be Batch.

General	
Start Extension	Configure the starting extension number of the batch of extensions to be added.
Create Number	Specify the number of extensions to be added. The default setting is 5.

Assign permission level to the user. The available permissions are "Internal", "Local", "National" and "International" from the lowest level to the highest level. The default setting is "Internal". Note: Users need to have the same level as or higher level than an outbound rule's privilege in order to make outbound calls from this rule. Voicemail Configure Voicemail. There are three valid options and the default option is "Enable Local Voicemail". Image: the SIP/IAX password for the users. Configure Voicemail: Enable Voicemail. SIP/IAX Password Enable Local Voicemail: Enable voicemail for the user. SIP/IAX Password Configure the SIP/IAX password for the users. Three options are available to create password for the batch of extensions. SIP/IAX Password - User Random Password. A random secure password to be used on all the extensions in the batch. Configure Voicemail password for security purpose. - Use Extension as Password. - Enter a password to be used on all the extensions in the batch. Configure the number of security purpose. - Use Extension as Password. - Enter a password to be used on all the extensions in the batch. Configure the number of seconds to ring the user before the call is forwarded to use this password for security purpose. - Use Extension as Password. - Enter a password to be used on all the extensions in the batch.		
VoicemailLocal Voicemail*.• Disable Voicemail: Disable Voicemail.• Enable Local Voicemail: Enable voicemail for the user.SIP/IAX PasswordConfigure the SIP/IAX password for the users. Three options are available to create password for the batch of extensions.SIP/IAX Password· User Random Password. A random secure password will be automatically generated. It is recommended to use this password to be used on all the extensions in the batch.Voicemail· Use Extension as Password. • Enter a password to be used on all the extensions in the batch.VoicemailConfigure Voicemail password (digits only) for the users. • Use Random Password. • A random password in digits will be automatically generated. It is recommended to use this password to be used on all the extensions in the batch.VoicemailPasswordPassword· Use Extension as Password. • Enter a password to be used on all the extensions in the batch.Ring TimeoutConfigure the number of seconds to ring the user before the call is forwarded to voicemail (voicemail is 60 seconds on the UCM6100, which can be configured in the global ring timeout setting under Web GUI>PBX Settings>Voice Prompt>Custom Prompt: General Preference. The valid range is between 5 seconds and 600 seconds.Note: If the end point also has a ring timeout configured, the actual ring timeout used is the shortest time set by either device.Ruto RecordEnable automatic recording for the calls using this extension. The default setting is disabled. The recording files can be accessed under Web GUI>CDR>Recording Files.Skip Voice	Permission	"National" and "International" from the lowest level to the highest level. The default setting is "Internal". Note: Users need to have the same level as or higher level than an outbound rule's
SIP/IAX Passwordpassword for the batch of extensions.SIP/IAX Password- User Random Password. A random secure password will be automatically generated. 	Music On Hold	

Enable LDAP	If enabled, the batch added extensions will be added to LDAP Phonebook PBX list; if disabled, the batch added extensions will be skipped when creating LDAP Phonebook.
Call Duration Limit	Configure the maximum duration of call-blocking.
IAX Settings	
Max Number of Calls	Configure the maximum number of calls allowed for each remote IP address.
Require Call Token	Configure to enable/disable requiring call token. If set to "Auto", it might lock out users who depend on backward compatibility when peer authentication credentials are shared between physical endpoints. The default setting is "Yes".
Other Settings	
SRTP	Enable SRTP for the call. The default setting is "No".
Fax Mode	 Select Fax Mode for this user. The default setting is "None". None: Disable Fax. Fax Detect: Fax signal from the user/trunk during the call can be detected and the received Fax will be sent to the Email address configured for this extension. If no Email address can be found for the user, the Fax will be sent to the default Email address configured in Fax setting page under Web GUI→Call Features→Fax/T.38.
Strategy	 This option controls how the extension can be used on devices within different types of network. Allow All Device in any network can register this extension. Local Subnet Only Only the user in specific subnet can register this extension. Up to three subnet addresses can be specified. A Specific IP Address Only the device on the specific IP address can register this extension. The default setting is "Allow All".
Skip Trunk Auth	If enable "All", users do not need to enter password when making an outbound call. If enable "Follow Me", the call can dial out via follow me without password.
Codec Preference	Select audio and video codec for the extension. The available codecs are: PCMU, PCMA, GSM, AAL2-G.726-32, G.722, G.729, G.723, iLBC, ADPCM, LPC10, H.264, H.265, H.263, H.263p and VP8.

Batch Extension Resetting Functionality

Users can select multiple extensions and reset their settings to default by pressing the reset button

and confirm the reset functionality. Once done, all settings in Basic Settings page will be restored to default values with the exception of Concurrent Registrations. User voicemail password will be reset to Random Password. User voicemail prompts and recordings will be deleted. User Management settings will also be restored to default with the exception of usernames and custom privileges

Search and Edit Extension

All the UCM6100 extensions are listed under Web GUI→**Extension/Trunk**→**Extensions**, with status, Extension, CallerID Name, Technology (SIP, IAX and FXS), IP and Port. Each extension has a checkbox for users to "Modify Selected Extensions" or "Delete Selected Extensions". Also, options "Edit" ⁽¹⁾, "Reboot" ⁽¹⁾ and "Delete" ⁽¹⁾ are available per extension. User can search an extension by specifying the extension number to find an extension quickly.

Exten	sions

Figure 80: Manage Extensions

• Status

Users can see the following icon for each extension to indicate the SIP status.

- Green: Idle
- Blue: Ringing
- Yellow: In Use
- Grey: Unavailable (the extension is not registered or disabled on the PBX)

Edit single extension

Click on \square to start editing the extension parameters.

Reset single extension

Click on $^{\textcircled{9}}$ to reset the extension parameters to default (except concurrent registration).

Other settings will be restored to default in **Maintenance** \rightarrow **User Management** \rightarrow **User Information** except user name and permissions, and delete the user voicemail prompt and voice messages.

Reboot the user

Click on \bigcirc to send NOTIFY reboot event to the device which has an UCM6100 extension already registered. To successfully reboot the user, "Zero Config" needs to be enabled on the UCM6100 Web GUI \rightarrow Value-added Features \rightarrow Zero Config \rightarrow Zero Config Settings.

• Delete single extension

Click on ^{IIII} to delete the extension. Or select the checkbox of the extension and then click on "Delete Selected Extensions".

• Modify selected extensions

Select the checkbox for the extension(s). Then click on "Edit" to edit the extensions in a batch.

• Delete selected extensions

Select the checkbox for the extension(s). Then click on "Delete " to delete the extension(s).

Export Extensions

The extensions configured on the UCM6100 can be exported to csv format file with selected technology "SIP", "IAX" or "FXS". Click on "Export Extensions" button and select technology in the prompt below.

	5 2	-			1			Nenose o comunication de la comunicación de la comunicación de la comunicación de la comunicación de la comunica

Figure 81: Export Extensions

The exported csv file can serve as a template for users to fill in desired extension information to be imported to the UCM6100.

Import Extensions

The capability to import extensions to the UCM6100 provides users flexibility to batch add extensions with similar or different configuration quickly into the PBX system.

- 1. Export extension csv file from the UCM6100 by clicking on "Export Extensions" button.
- 2. Fill up the extension information you would like in the exported csv template.
- 3. Click on "Import Extensions" button. The following dialog will be prompted.

Import		×
Please use UTF-8 encoding wh using Notepad and saved as a	en importing a CSV file. In Windows or other operating systems, it can be UTF-8 encoded file.	opened
"delete and recreate" removes recreate.	the extension and the extension as a member of the other business, and t	then
On Duplicate Extension:	Delete and Recreate	
Extension File :	Skip	
	Delete and Recreate	
	Update Information	

Figure 82: Import Extensions

- 4. Select the option in "On Duplicate Extension" to define how the duplicate extension(s) in the imported csv file should be treated by the PBX.
 - **Skip:** Duplicate extensions in the csv file will be skipped. The PBX will keep the current extension information as previously configured without change.
 - **Delete and Recreate:** The current extension previously configured will be deleted and the duplicate extension in the csv file will be loaded to the PBX.
 - **Update Information:** The current extension previously configured in the PBX will be kept. However, if the duplicate extension in the csv file has different configuration for any options, it will override the configuration for those options in the extension.
- 5. Click on "Choose file to upload" to select csv file from local directory in the PC.
- 6. Click on "Apply Changes" to apply the imported file on the UCM6100.

Extension Details

Users can click on an extension number in the *Extensions* list page and quickly view information about it such as:

- **Extension**: Shows the Extension number.
- **Status**: Shows the status of the extension.
- Presence status: Indicates the Presence Status of this extension.
- Terminal Type: Shows the Type of the terminal using this extension (SIP, FXS...etc.).
- Caller ID Name: Reveals the Caller ID Name configured on the extension.
- Messages: Shows the messages stats.
- IP and Port: The IP address and the ports of the device using the extension.
- Email status: Show the Email status (sent, to be sent...etc.).
- **Ring Group**: Indicates the ring groups that this extension belongs to.
- **Call Queue**: Indicates the Cal Queues that this extension belongs to.
- Call Queue (Dynamic): Indicates the Call Queues that this extension belongs to as a dynamic agent.

E-mail Notification

Once the extensions are created with Email addresses, the PBX administrator can click on button "E-mail Notification" to send the account registration and configuration information to the user. Please make sure Email

setting under Web GUI→System Settings→Email Settings is properly configured and tested on the UCM6100 before using "E-mail Notification".

When click on "E-mail Notification" button, the following message will be prompted in the web page. Click on OK to confirm sending the account information to all users' Email addresses.

E-mail Notification	×
Are you sure you want to send the selected account information to the correspond addresses? If you do not select any extension, it will send all the account informatio corresponding email addresses by default.	-
Cancel Email Template OK	

Figure 86: E-mail Notification - Prompt Information

The user will receive Email including account registration information and LDAP configuration. A QR code is also generated for Mobile applications to scan it and get automatically provisioned. QR code provisioning is supported on Grandstream Softphone GS Wave Android[™] application and iOS application.

Figure 87: Account Registration Information and QR Code

Figure 88: LDAP Client Information and QR Code

Multiple Registrations per Extension

UCM6100 supports multiple registrations per extension so that users can use the same extension on devices in different locations.

Figure 89: Multiple Registrations per Extension

This feature can be enabled by configuring option "Concurrent Registrations" under Web GUI**→Extension/Trunk→Edit Extension**. The default value is set to 1 for security purpose. Maximum is 10.

Figure 90: Extension - Concurrent Registration

SMS Message Support

The UCM6100 provides built-in SIP SMS message support. For SIP end devices such as Grandstream GXP or GXV phones that supports SIP message, after an UCM6100 account is registered on the end device, the user can send and receive SMS message. Please refer to the end device documentation on how to send and receive SMS message.

SMS Message support is a new feature added since firmware 1.0.10.x which is built with Asterisk 13.

Figure 91: SMS Message Support

EXTENSION GROUPS

The UCM6100 extension group feature allows users to assign and categorize extensions in different groups to better manage the configurations on the UCM6100. For example, when configuring "Enable Filter on Source Caller ID", users could select a group instead of each person's extension to assign. This feature simplifies the configuration process and helps manage and categorize the extensions for business environment.

Configure Extension Groups

Extension group can be configured via Web GUI → Extension/Trunk → Extension Groups.

- Click on Hadd to create a new extension group.
- Click on ^C to edit the extension group.
- Click on ^Ш to delete the extension group.

Select extensions from the list on the left side to the right side.

Create New Extension Group				
Name:	Tech_Supprot_Team]

Available Ext		×			

Figure 93: Select Extension Group in Outbound Route

ANALOG TRUNKS

Go to Web GUI→Extension/Trunk→Analog Trunks to add and edit analog trunks.

- Click on "Create New Analog Trunk" to add a new analog trunk.
- Click on 🖾 to edit the analog trunk.
- Click on to delete the analog trunk.

Analog Trunk Configuration

The analog trunk options are listed in the table below.

Channels	 Select the channel for the analog trunk. UCM6102: 2 channels UCM6104: 4 channels UCM6108: 8 channels
Trunk Name	Specify a unique label to identify the trunk when listed in outbound rules, incoming rules and etc.
SLA Mode	Enable this option to satisfy two primary use cases, which include emulating a simple key system and creating shared extensions on a PBX. Enable SLA Mode will disable polarity reversal.
Barge Allowed	The barge option specifies whether other stations can join a call in progress on this trunk. If enabled, the other stations can press the line button to join the call. The default setting is Yes.
Hold Access	The hold option specifies hold permissions for this trunk. If set to "Open", any station can place this trunk on hold and any other station is allowed to retrieve the call. If set to "Private", only the station that places the call on hold can retrieve the call. The default setting is Yes.
Advanced Options	
Enable Polarity Reversal	If enabled, a polarity reversal will be marked as received when an outgoing call is answered by the remote party. For some countries, a polarity reversal is used for signaling the disconnection of a phone line and the call will be considered as "Hangup" on a polarity reversal. The default setting is "No".
SLA Mode Barge Allowed Hold Access Advanced Options Enable Polarity	Specify a unique label to identify the trunk when listed in outbound rules, incominules and etc. Enable this option to satisfy two primary use cases, which include emulating a simulative system and creating shared extensions on a PBX. Enable SLA Mode will disall polarity reversal. The barge option specifies whether other stations can join a call in progress on the trunk. If enabled, the other stations can press the line button to join the call. The default setting is Yes. The hold option specifies hold permissions for this trunk. If set to "Open", any state can place this trunk on hold and any other station is allowed to retrieve the call. If a to "Private", only the station that places the call on hold can retrieve the call. The default setting is Yes.

Table 51: Analog Trunk Configuration Parameters

Polarity on Answer Delay	When FXO port answers the call, FXS may send a Polarity Reversal. If this interval is shorter than the value of "Polarity on Answer Delay", the Polarity Reversal will be ignored. Otherwise, the FXO will Onhook to disconnect the call. The default setting is 600ms.
Current Disconnect Threshold (ms)	This is the periodic time (in ms) that the UCM6100 will use to check on a voltage drop in the line. The default setting is 200. The valid range is 50 to 3000.
Ring Timeout	Configure the ring timeout (in ms). Trunk (FXO) devices must have a timeout to determine if there was a Hangup before the line is answered. This value can be used to configure how long it takes before the UCM6100 considers a non-ringing line with Hangup activity. The default setting is 8000.
RX Gain	Configure the RX gain for the receiving channel of analog FXO port. The valid range is from -13.5 (dB) to + 12.0 (dB). The default setting is 0.
TX Gain	Configure the TX gain for the transmitting channel of analog FXO port. The valid range is from -13.5 (dB) to + 12.0 (dB). The default setting is 0.
Use CallerID	Configure to enable CallerID detection. The default setting is "Yes".
Caller ID Scheme	Select the Caller ID scheme for this trunk. The default setting is "Bellcore/Telcordia".
FXO Dial Delay(ms)	Configure the time interval between off-hook and first dialed digit for outbound calls.
Auto Record	Enable automatic recording for the calls using this trunk. The default setting is disabled. The recording files can be accessed under Web $GUI \rightarrow CDR \rightarrow Recording$ Files.
Disable This Trunk	If selected, the trunk will be disabled.
DAHDI Out Line Selection	 This is to implement analog trunk outbound line selection strategy. Three options are available: Ascend When the call goes out from this analog trunk, it will always try to use the first idle FXO port. The port order that the call will use to go out would be port 1→port 2→port 10→port 16. Every time it will start with port 1 (if it's idle). Poll When the call goes out from this analog trunk, it will use the port that is not used last time. And it will always use the port in the order of port 1→2→10→16→1→2→10→16→1→2→10→16, following the last port being used. Descend When the call goes out from this analog trunk, it will always try to use the last idle FXO port. The port order that the call will use to go out would be port 1→2→10→16→1→2→10→16→1→2→10→16, following the last port being used. Descend When the call goes out from this analog trunk, it will always try to use the last idle FXO port. The port order that the call will use to go out would be port 16→port 10→port 2→port 1. Every time it will start with port 16 (if it's idle).

Tone Settings	
Busy Detection	Busy Detection is used to detect far end Hangup or for detecting busy signal. The default setting is "Yes".
Busy Tone Count	If "Busy Detection" is enabled, users can specify the number of busy tones to be played before hanging up. The default setting is 2. Better results might be achieved if set to 4, 6 or even 8. Please note that the higher the number is, the more time is needed to Hangup the channel. However, this might lower the probability to get random Hangup.
Congestion Detection	Congestion detection is used to detect far end congestion signal. The default setting is "Yes".
Congestion Count	If "Congestion Detection" is enabled, users can specify the number of congestion tones to wait for. The default setting is 2.
Tone Country	Select the country for tone settings. If "Custom" is selected, users could manually configure the values for Busy Tone and Congestion Tone. The default setting is "United States of America (USA)".
Busy Tone	Syntax: f1=val[@level][,f2=val[@level]],c=on1/off1[-on2/off2[-on3/off3]]; Frequencies are in Hz and cadence on and off are in ms. Frequencies Range: [0, 4000) Busy Level Range: (-300, 0) Cadence Range: [0, 16383]. Select Tone Country "Custom" to manually configure Busy Tone value. Default value: f1=480@-50,f2=620@-50,c=500/500
Congestion Tone	Syntax: f1=val[@level][,f2=val[@level]],c=on1/off1[-on2/off2[-on3/off3]]; Frequencies are in Hz and cadence on and off are in ms. Frequencies Range: [0, 4000) Busy Level Range: (-300, 0) Cadence Range: [0, 16383]. Select Tone Country "Custom" to manually configure Busy Tone value. Default value: f1=480@-50,f2=620@-50,c=250/250
PSTN Detection	Click on "Detect" to detect the busy tone, Polarity Reversal and Current Disconnect by PSTN. Before the detecting, please make sure there are more than one channel configured and working properly. If the detection has busy tone, the "Tone Country" option will be set as "Custom".

PSTN Detection

The UCM6100 provides PSTN detection function to help users detect the busy tone, Polarity Reversal and Current Disconnect by making a call from the PSTN line to another destination. The detecting call will be answered and up for about 1 minute. Once done, the detecting result will show and can be used for the UCM6100 settings.

- 1. Go to UCM6100 Web GUI→Extension/Trunk→Analog Trunks page.
- 2. Click to edit the analog trunk created for the FXO port.
- 3. In the dialog window to edit the analog trunk, go to "Tone Settings" section and there are two methods to set the busy tone.
 - Tone Country. The default setting is "United States of America (USA)".
 - PSTN Detection.

Tone Settings			
Busy Detection :		* Busy Tone Count:	2
Congestion Detection		* Congestion Count:	2
* Tone Country:	United States o Y	* Busy Tone:	f1=480@-50,f2=620
* Congestion Tone Se.	f1=480@-50,f2=620	PSTN Detection:	Detect

Dump Call Progress Tone File.		
	call up for about 1 minute. If you have selected Semi-au one only after you are informed.	ito
	Cancel Detect	

Figure 95: UCM6100 PSTN Detection

• If there are two FXO ports connected to PSTN lines, use the following settings for auto-detection.

Detect Model: Auto Detect.

Source Channel: The source channel to be detected.

Destination Channel: The channel to help detecting. For example, the second FXO port.

Destination Number: The number to be dialed for detecting. This number must be the actual PSTN number for the FXO port used as the destination channel.

PSTN Detection	x	
Detect model:	Auto Detect 🗸	
Source Channel (to be detect	1 ~	
Destination Channel :	2 ~	
* Destination Number:	123456	
Dump Call Progress Tone File		
Note: Detection will keep the call up for about 1 minute. If you have selected Sen Detect, please pick up the phone only after you are informed.		
	Cancel Detect	

Figure 96: UCM6100 PSTN Detection: Auto Detect

• If there is only one FXO port connected to PSTN line, use the following settings for auto-detection.

PSTN Detection	×
Detect model: Semi-auto Detect ~	
Source Channel (to be detect 1 Y	
* Destination Number: 123456	
Dump Call Progress Tone File	
Note: Detection will keep the call up for about 1 minute. If you have selected Detect, please pick up the phone only after you are informed.	Semi-auto
Cancel Detect	

Figure 97: UCM6100 PSTN Detection: Semi-Auto Detect

Detect Model: Semi-auto Detect.

Source Channel: The source channel to be detected.

Destination Number: The number to be dialed for detecting. This number could be a cell phone number or other PSTN number that can be reached from the source channel PSTN number.

- 5. Click "Detect" to start detecting. The source channel will initiate a call to the destination number. For "Auto Detect", the call will be automatically answered. For "Semi-auto Detect", the UCM6100 Web GUI will display prompt to notify the user to answer or hang up the call to finish the detecting process.
- 6. Once done, the detected result will show. Users could save the detecting result as the current UCM6100 settings.

Detect Model	 Select "Auto Detect" or "Semi-auto Detect" for PSTN detection. Auto Detect Please make sure two or more channels are connected to the UCM6100 and in idle status before starting the detection. During the detection, one channel will be used as caller (Source Channel) and another channel will be used as callee (Destination Channel). The UCM6100 will control the call to be established and hang up between caller and callee to finish the detection. Semi-auto Detect Semi-auto Detect Semi-auto detection requires answering or hanging up the call manually. Please make sure one channel is connected to the UCM6100 and in idle status before starting the detection. During the detection, source channel will be used as caller and send the call to the configured Destination Number. Users will then need follow the prompts in Web GUI to help finish the detection.
Source Channel	Select the channel to be detected.
Destination Channel	Select the channel to help detect when "Auto Detect" is used.
Destination Number	Configure the number to be called to help the detection.

Table 52: PSTN Detection for Analog Trunk

▲ Note:

- The PSTN detection process will keep the call up for about 1 minute.
- If "Semi-auto Detect' is used, please pick up the call only after informed from the Web GUI prompt.
- Once the detection is successful, the detected parameters "Busy Tone", "Polarity Reversal" and "Current Disconnect by PSTN" will be filled into the corresponding fields in the analog trunk configuration.

VOIP TRUNKS

VoIP Trunk Configuration

VoIP trunks can be configured in UCM6100 under Web GUI→**Extension/Trunk**→**VoIP Trunks**. Once created, the VoIP trunks will be listed with Provider Name, Type, Hostname/IP, Username and Options to edit/detect the trunk.

- Click on "Create New SIP Trunk" or "Create New IAX Trunk" to add a new VoIP trunk.
- Click on G to configure detailed parameters for the VoIP trunk.
- Click on ¹ to configure Direct Outward Dialing (DOD) for the SIP Trunk.
- Click on 🧖 to start LDAP Sync.
- Click on U to delete the VoIP trunk.

For VoIP trunk example, please refer to the document in the following link: <u>http://www.grandstream.com/sites/default/files/Resources/ucm6xxx_sip_trunk_guide.pdf</u>

The VoIP trunk options are listed in the table below.

Table 53: Create New SIP Trunk

Туре	Select the VoIP trunk type.Peer SIP TrunkRegister SIP Trunk
Provider Name	Configure a unique label (up to 64 character) to identify this trunk when listed in outbound rules, inbound rules etc.
Host Name	Configure the IP address or URL for the VoIP provider's server of the trunk.
Keep Original CID	Keep the CID from the inbound call when dialing out. This setting will override "Keep Trunk CID" option. Please make sure that the peer PBX at the other side supports to match user entry using "username" field from authentication line.
Keep Trunk CID	If enabled, the trunk CID will not be overridden by extension's CID when the extension has CID configured. The default setting is "No".
NAT	Turn on this setting when the PBX is using public IP and communicating with devices behind NAT. If there is one-way audio issue, usually it is related to NAT configuration or SIP/RTP port support on the firewall.

Disable This Trunk	If checked, the trunk will be disabled. Note: If a current SIP trunk is disabled, UCM will send UNREGISTER message (REGISTER message with expires=0) to the SIP provider.
TEL URI	If the trunk has an assigned PSTN telephone number, this field should be set to "User=Phone". Then a "User=Phone" parameter will be attached to the Request- Line and TO header in the SIP request to indicate the E.164 number. If set to "Enable", "Tel:" will be used instead of "SIP:" in the SIP request. The default setting is disabled.
Caller ID	 Configure the Caller ID. This is the number that the trunk will try to use when making outbound calls. For some providers, it might not be possible to set the CallerID with this option and this option will be ignored. Important Note: When making outgoing calls, the following priority order rule will be used to determine which CallerID will be set before sending out the call : From user (Register Trunk Only) → CID from inbound call (<i>Keep Original CID</i> Enabled) → Trunk Username/CallerID (<i>Keep Trunk CID</i> Enabled) → DOD → Extension CallerID Number → Trunk Username/CallerID (<i>Keep Trunk CID</i> Disabled) → Global Outbound CID.
Need Registration	Select whether the trunk needs to register on the external server or not when "Register SIP Trunk" type is selected. The default setting is No.
Username	Enter the username to register to the trunk from the provider when "Register SIP Trunk" type is selected.
Password	Enter the password to register to the trunk from the provider when "Register SIP Trunk" is selected.
Auth ID	Enter the Authentication ID for "Register SIP Trunk" type.
Auto Record	Enable automatic recording for the calls using this trunk (for SIP trunk only). The default setting is disabled. The recording files can be accessed under Web $GUI \rightarrow CDR \rightarrow Recording Files$.
Direct Callback	Allows external numbers the option to get directed to the extension that last called them. For Example: User 2002 has dialed external number 061234575 but they were not reachable, once they have received missed call notification on their phone, they would mostly call back the number, if the option "Direct Callback" is enabled then they will be directly bridged to user 2002 regardless of the configured inbound destination.

Table 54: SIP Register Trunk Configuration Parameters

Basic Settings	
Provider Name	Configure a unique label to identify this trunk when listed in outbound rules,
	inbound rules etc.

Host Name	Configure the IP address or URL for the VoIP provider's server of the trunk.
Transport	 Configure the SIP transport protocol to be used in this trunk. The default setting is "UDP". UDP TCP TLS
Keep Original CID	Keep the CID from the inbound call when dialing out. This setting will override "Keep Trunk CID" option. Please make sure that the peer PBX at the other side supports to match user entry using "username" field from authentication line.
Keep Trunk CID	If enabled, the trunk CID will not be overridden by extension's CID when the extension has CID configured. The default setting is "No".
NAT	Turn on this option when the PBX is using public IP and communicating with devices behind NAT. If there is one-way audio issue, usually it's related to NAT configuration or SIP/RTP port configuration on the firewall.
Disable This Trunk	If selected, the trunk will be disabled. Note: If a current SIP trunk is disabled, UCM will send UNREGISTER message (REGISTER message with expires=0) to the SIP provider.
TEL URI	If the trunk has an assigned PSTN telephone number, this field should be set to "User=Phone". Then a "User=Phone" parameter will be attached to the Request- Line and TO header in the SIP request to indicate the E.164 number. If set to "Enable", "Tel:" will be used instead of "SIP:" in the SIP request. The default setting is disabled.
Need Registration	Select whether the trunk needs to register on the external server or not when "Register SIP Trunk" type is selected. The default setting is No.
Allow outgoing calls if registration failure	If enabled outgoing calls even if the registration to this trunk fail will still be able to go through. Note that if we uncheck "Need Registration" option, this option will be ignored.
CallerID Name	Configure the new name of the caller when the extension has no CallerID Name configured.
From Domain	Configure the actual domain name where the extension comes from. This can be used to override the "From" Header. For example, "trunk.UCM6100.provider.com" is the From Domain in From Header: sip:1234567@trunk.UCM6100.provider.com.
From User	Configure the actual user name of the extension. This can be used to override the "From" Header. There are cases where there is a single ID for registration (single trunk) with multiple DIDs. For example, "1234567" is the From User in From Header: sip:1234567@trunk.UCM6100.provider.com.

	Enter the username to register to the trunk from the provider when "Register SIP
Username	Trunk" type is selected.
Password	Enter the password to register to the trunk when "Register SIP Trunk" is selected.
Auth ID	Enter the Authentication ID for "Register SIP Trunk" type.
Auth Trunk	If enabled, the UCM will send 401 response to the incoming call to authenticate the trunk.
Auto Record	Enable automatic recording for the calls using this trunk (for SIP trunk only). The default setting is disabled. The recording files can be accessed under Web GUI→CDR→Recording Files.
Direct Callback	Allows external numbers the option to get directed to the extension that last called them. For Example: User 2002 has dialed external number 061234575 but they were not reachable, once they have received missed call notification on their phone, they would mostly call back the number, if the option "Direct Callback" is enabled then they will be directly bridged to user 2002 regardless of the configured inbound destination.
Advanced Settings	
Codec Preference	Select audio and video codec for the VoIP trunk. The available codecs are: PCMU, PCMA, GSM, AAL2-G.726-32, G.726, G.722, G.729, G.723, iLBC, ADPCM, H.264, H.265, H.263, H.263p and VP8.
Send PPI Header	If enabled, the SIP INVITE message sent to the trunk will contain PPI (P-Preferred- Identity) header. The default setting is "No". Note: "Send PPI Header" and "Send PAI Header" cannot be enabled at the same time. Only one of the two headers can be contained in SIP INVITE message.
PPI Mode	 Default – Include the trunk's preferred CID (configured in <i>Basic Settings</i>) in the PPI Header. Original CID – Include the original CID in the PPI Header. DOD Number – Include the trunk's DOD number in the PPI Header. If no DOD number has been set, the trunk's preferred CID will be used.
Send PAI Header	If enabled, the SIP INVITE message sent to the trunk will contain PAI (P-Asserted- Identity) header including configured PAI Header. The default setting is "No". Note: "Send PPI Header" and "Send PAI Header" cannot be enabled at the same time. Only one of the two headers can be contained in the SIP INVITE message.
PAI Header	If "Send PAI Header" is enabled and "PAI Header" is configured as "123456" for instance, the PAI header in the SIP message sent from the UCM will contain "123456". If "Send PAI Header" is enabled and "PAI Header" is configured as "empty", the PAI header in the SIP message sent from the UCM will contain the original CID.

	Note: "Send PAI Header" needs to be enabled to use this feature
DOD As From Name	If enabled and "From User" is configured, the INVITE's From header will contain the DOD number.
Passthrough PAI Header	If checked and option "Send PAI Header" not checked, the PAI header will be passthrough from one side to the other side.
Outbound Proxy Support	Select to enable outbound proxy in this trunk. The default setting is "No".
Outbound Proxy	When outbound proxy support is enabled, enter the IP address or URL of the outbound proxy.
Remove OBP from Route	It is used to set if the phone system will remove outbound proxy URI from the route header. If is set to "Yes", it will remove the route header from SIP requests. The default setting is "No".
DID Mode	Configure where to get the destination ID of an incoming SIP call, from SIP Request-line or To-header. The default is set to "Request-line".
DTMF Mode	 Configure the default DTMF mode when sending DTMF on this trunk. Default: The global setting of DTMF mode will be used. The global setting for DTMF Mode setting is under Web GUI→PBX Settings→SIP Settings→ToS. RFC2833: Send DTMF using RFC2833. Info: Send DTMF using SIP INFO message. Inband: Send DTMF using inband audio. This requires 64-bit codec, i.e., PCMU and PCMA. Auto: Send DTMF using RFC2833 if offered. Otherwise, inband will be used.
Enable Heartbeat Detection	If enabled, the UCM6100 will regularly send SIP OPTIONS to the device to check if the device is still online. The default setting is "No".
Heartbeat Frequency	When "Enable Heartbeat Detection" option is set to "Yes", configure the interval (in seconds) of the SIP OPTIONS message sent to the device to check if the device is still online. The default setting is 60 seconds.
Maximum Number of Call Lines	The maximum number of concurrent calls using the trunk. The default settings 0, which means no limit.

Fax Mode	 Select Fax mode. The default setting is "None". None: Disable Fax. Fax Detect: Fax signal from the user/trunk during the call can be detected and the received Fax will be sent to the Email address configured for this extension. If no Email address can be found for the user, the Fax will be sent to the default Email address configured in Fax setting page under Web GUI→Call Features→Fax/T.38.
SRTP	Enable SRTP for the VoIP trunk. The default setting is "No".
CC Settings	
Enable CC	If enabled, the system will automatically alert the user when a called party is available, given that a previous call to that party failed for some reason.
CC Max Agents	Configure the maximum number of CCSS agents which may be allocated for this channel. In other words, this number serves as the maximum number of CC requests this channel is allowed to make. The minimum value is 1.
CC Max Monitors	Configure the maximum number of monitor structures which may be created for this device. In other words, this number tells how many callers may request CC services for a specific device at one time. The minimum value is 1.

Table 55: SIP Peer Trunk Configuration Parameters

Basic Settings	
Provider Name	Configure a unique label to identify this trunk when listed in outbound rules, inbound rules and etc.
Host Name	Configure the IP address or URL for the VoIP provider's server of the trunk.
Auto Record	Enable automatic recording for the calls using this trunk (for SIP trunk only). The default setting is disabled. The recording files can be accessed under Web $GUI \rightarrow CDR \rightarrow Recording Files$.
Keep Original CID	Keep the CID from the inbound call when dialing out, this setting will override "Keep Trunk CID" option. Please make sure that the peer PBX at the other side supports to match user entry using "username" field from authentication line.
Keep Trunk CID	If enabled, the trunk CID will not be overridden by extension's CID when the extension has CID configured. The default setting is "No".
NAT	Turn on this option when the PBX is using public IP and communicating with devices behind NAT. If there is one-way audio issue, usually it's related to NAT configuration or SIP/RTP port configuration on the firewall.
Disable This Trunk	If selected, the trunk will be disabled. Note: If a current SIP trunk is disabled, UCM will send UNREGISTER message (REGISTER message with expires=0) to the SIP provider.

TEL URI	If the trunk has an assigned PSTN telephone number, this field should be set to "User=Phone". Then a "User=Phone" parameter will be attached to the Request- Line and TO header in the SIP request to indicate the E.164 number. If set to "Enable", "Tel:" will be used instead of "SIP:" in the SIP request. The default setting is disabled.
Caller ID	 Configure the Caller ID. This is the number that the trunk will try to use when making outbound calls. For some providers, it might not be possible to set the CallerID with this option and this option will be ignored. Important Note: When making outgoing calls, the following priority order rule will be used to determine which CallerID will be set before sending out the call : CID from inbound call (<i>Keep Original CID</i> Enabled) → Trunk Username/CallerID (<i>Keep Trunk CID</i> Enabled) → DOD → Extension CallerID Number → Trunk Username/CallerID (<i>Keep Trunk CID</i> Enabled) → Global Outbound CID.
CallerID Name	Configure the name of the caller to be displayed when the extension has no CallerID Name configured.
Transport	Configure the SIP transport protocol to be used in this trunk. The default setting is "UDP". • UDP • TCP • TLS
Direct Callback	Allows external numbers the option to get directed to the extension that last called them. For Example: User 2002 has dialed external number 061234575 but they were not reachable, once they have received missed call notification on their phone, they would mostly call back the number, if the option "Direct Callback" is enabled then they will be directly bridged to user 2002 regardless of the configured inbound destination.
Advanced Settings	
Codec Preference	Select audio and video codec for the VoIP trunk. The available codecs are: PCMU, PCMA, GSM, AAL2-G.726-32, G.726, G.722, G.729, G.723, iLBC, ADPCM, H.264, H.265, H.263, H.263p and VP8.
DID Mode	Configure where to get the destination ID of an incoming SIP call, from SIP Request-line or To-header. The default is set to "Request-line".
	Configure the default DTMF mode when sending DTMF on this trunk.
DTMF Mode	 Default: The global setting of DTMF mode will be used. The global setting for DTMF Mode setting is under Web GUI→PBX Settings→SIP Settings→ToS.

	RFC2833: Send DTMF using RFC2833.
	Info: Send DTMF using SIP INFO message.
	• Inband: Send DTMF using inband audio. This requires 64-bit codec, i.e., PCMU and PCMA.
	• Auto: Send DTMF using RFC2833 if offered. Otherwise, inband is used.
Enable Heartbeat Detection	If enabled, the UCM6100 will regularly send SIP OPTIONS to the device to check if the device is still online. The default setting is "No".
Heartbeat Frequency	When "Enable Heartbeat Detection" option is set to "Yes", configure the interval (in seconds) of the SIP OPTIONS message sent to the device to check if the device is still online. The default setting is 60 seconds.
Maximum Number of Call Lines	The maximum number of concurrent calls using the trunk. The default settings 0, which means no limit.
Fax Mode	 Select Fax mode. The default setting is "None". None: Disable Fax. Fax Detect: Fax signal from the user/trunk during the call can be detected and the received Fax will be sent to the Email address configured for this extension. If no Email address can be found for the user, the Fax will be sent to the default Email address configured in Fax setting page under Web GUI→Call Features→Fax/T.38.
SRTP	Enable SRTP for the VoIP trunk. The default setting is "No".
Sync LDAP Enable	If enabled, the local UCM6100 will automatically provide and update the local LDAP contacts to the remote UCM6100 SIP peer trunk. In order to ensure successful synchronization, the remote UCM6100 peer also needs to enable this option on the SIP peer trunk. The default setting is "No".
Sync LDAP Password	This is the password used for LDAP contact file encryption and decryption during the LDAP sync process. The password must be the same on both UCM6100 peers to ensure successful synchronization.
Sync LDAP Port	Configure the TCP port used LDAP sync feature between two peer UCM6100.
LDAP Outbound Rule	Specify an outbound rule for LDAP sync feature. The UCM6100 will automatically modify the remote contacts by adding prefix parsed from this rule.
LDAP Dialed Prefix	Specify the prefix for LDAP sync feature. The UCM6100 will automatically modify the remote contacts by adding this prefix.
CC Settings	
Enable CC	If enabled, the system will automatically alert the user when a called party is available, given that a previous call to that party failed for some reason.

CC Max Agents	Configure the maximum number of CCSS agents which may be allocated for this channel. In other words, this number serves as the maximum number of CC requests this channel can make. The minimum value is 1.
CC Max Monitors	Configure the maximum number of monitor structures which may be created for this device. In other words, this number tells how many callers may request CC services for a specific device at one time. The minimum value is 1.

	Table 56: Create New IAX Trunk
Туре	Select the VoIP trunk type.Peer IAX TrunkRegister IAX Trunk
Provider Name	Configure a unique label to identify this trunk when listed in outbound rules, inbound rules etc.
Host Name	Configure the IP address or URL for the VoIP provider's server of the trunk.
Keep Trunk CID	If enabled, the trunk CID will not be overridden by extension's CID when the extension has CID configured. The default setting is "No".
Username	Enter the username to register to the trunk from the provider when "Register IAX Trunk" type is selected.
Password	Enter the password to register to the trunk from the provider when "Register IAX Trunk" type is selected.
Disable This Trunk	If selected, the trunk will be disabled.

Table 57: IAX Register Trunk Configuration Parameters

Basic Settings	
Provider Name	Configure a unique label to identify this trunk when listed in outbound rules, inbound rules etc.
Host Name	Configure the IP address or URL for the VoIP provider's server of the trunk.
Keep Trunk CID	If enabled, the trunk CID will not be overridden by extension's CID when the extension has CID configured. The default setting is "No".
Disable This Trunk	If selected, the trunk will be disabled.
Caller ID	Configure the Caller ID. This is the number that the trunk will try to use when making outbound calls. For some providers, it might not be possible to set the CallerID with this option and this option will be ignored. Important Note: When making outgoing calls, the following priority order rule will be used to determine which CallerID will be set before sending out the call : From user (Register Trunk Only) \rightarrow CID from inbound call (<i>Keep Original CID</i>

	Enabled) \rightarrow Trunk Username/CallerID (<i>Keep Trunk CID</i> Enabled) \rightarrow DOD \rightarrow Extension CallerID Number \rightarrow Trunk Username/CallerID (<i>Keep Trunk CID</i> Disabled) \rightarrow Global Outbound CID.
CallerID Name	Configure the name of the caller to be displayed when the extension has no CallerID Name configured.
Username	Enter the username to register to the trunk from the provider.
Password	Enter the password to register to the trunk from the provider.
Advanced Settings	
Codec Preference	Select audio and video codec for the VoIP trunk. The available codecs are: PCMU, PCMA, GSM, AAL2-G.726-32, G.726, G.722, G.729, G.723, iLBC, ADPCM, H.264, H.265, H.263, H.263p and VP8.
Enable Heartbeat Detection	If enabled, the UCM6100 will regularly send SIP OPTIONS to the device to check if the device is still online. The default setting is "No".
Heartbeat Frequency	When "Enable Heartbeat Detection" option is set to "Yes", configure the interval (in seconds) of the SIP OPTIONS message sent to the device to check if the device is still online. The default setting is 60 seconds.
Maximum Number of Call Lines	The maximum number of concurrent calls using the trunk. The default settings 0, which means no limited.
Fax Mode	 Select Fax mode. The default setting is "None". None: Disable Fax. Fax Detect: Fax signal from the user/trunk during the call can be detected and the received Fax will be sent to the Email address configured for this extension. If no Email address can be found for the user, the Fax will be sent to the default Email address configured in Fax setting page under Web GUI→Call Features→Fax/T.38.

Table 58: IAX Peer Trunk Configuration Parameters

Basic Settings	
Provider Name	Configure a unique label to identify this trunk when listed in outbound rules, inbound rules etc.
Host Name	Configure the IP address or URL for the VoIP provider's server of the trunk.
Keep Trunk CID	If enabled, the trunk CID will not be overridden by extension's CID when the extension has CID configured. The default setting is "No".
Disable This Trunk	If selected, the trunk will be disabled.
Caller ID	Configure the Caller ID. This is the number that the trunk will try to use when

	 making outbound calls. For some providers, it might not be possible to set the CallerID with this option and this option will be ignored. Important Note: When making outgoing calls, the following priority order rule will be used to determine which CallerID will be set before sending out the call : CID from inbound call (<i>Keep Original CID</i> Enabled) → Trunk Username/CallerID (<i>Keep Trunk CID</i> Enabled) → DOD → Extension CallerID Number → Trunk Username/CallerID (<i>Keep Trunk CID</i> Disabled) → Global Outbound CID
CallerID Name	Configure the name of the caller to be displayed when the extension has no CallerID Name configured.
Advanced Settings	
Codec Preference	Select audio and video codec for the VoIP trunk. The available codecs are: PCMU, PCMA, GSM, AAL2-G.726-32, G.726, G.722, G.729, G.723, iLBC, ADPCM, H.264, H.265, H.263, H.263p and VP8.
Enable Heartbeat Detection	If enabled, the UCM6100 will regularly send SIP OPTIONS to the device to check if the device is still online. The default setting is "No".
Heartbeat Frequency	When "Enable Heartbeat Detection" option is set to "Yes", configure the interval (in seconds) of the SIP OPTIONS message sent to the device to check if the device is still online. The default setting is 60 seconds.
Maximum Number of Call Lines	The maximum number of concurrent calls using the trunk. The default settings 0, which means no limited.
Fax Mode	 Select Fax mode. The default setting is "None". None: Disable Fax. Fax Detect: Fax signal from the user/trunk during the call can be detected and the received Fax will be sent to the Email address configured for this extension. If no Email address can be found for the user, the Fax will be sent to the default Email address configured in Fax setting page under Web GUI→Call Features→Fax/T.38.

Trunk Groups

Users can create VoIP Trunk Groups to register and easily apply the same settings on multiple accounts within the same SIP server. This can drastically reduce the amount of time needed to manage accounts for the same server and improve the overall cleanliness of the web UI.

VoIP Trunks					
+ Create New SIP Trunk	+ Create New IAX Trunk

Direct Outward Dialing (DOD)

The UCM6100 provides Direct Outward Dialing (DOD) which is a service of a local phone company (or local exchange carrier) that allows subscribers within a company's PBX system to connect to outside lines directly.

Example of how DOD is used:

Company ABC has a SIP trunk. This SIP trunk has 4 DIDs associated to it. The main number of the office is routed to an auto attendant. The other three numbers are direct lines to specific users of the company. Now when a user makes an outbound call their caller ID shows up as the main office number. This poses a problem as the CEO would like their calls to come from their direct line. This can be accomplished by configuring DOD for the CEO's extension.

Steps to configure DOD on the UCM6100:

- 1. To setup DOD go to UCM6100 Web GUI→Extension/Trunk→VoIP Trunks page.
- 2. Click ¹ to access the DOD options for the selected SIP Trunk.
- 3. Click "Create a new DOD" to begin your DOD setup
- 4. For "DOD Number" enter one of the numbers (DIDs) from your SIP trunk provider. In the example above Company ABC received 4 DIDs from their provider. ABC will enter in the number for the CEO's direct line.
- 5. Set the DOD name and If extension number need to be appended to the DID number click on "Add Extension".
- 6. Select an extension from the "Available Extensions" list. Users have the option of selecting more than one extension. In this case, Company ABC would select the CEO's extension. After making the selection, click on the button to move the extension(s) to the "Selected Extensions" list.

SLA STATION

The UCM6100 supports SLA that allows mapping the key with LED on a multi-line phone to different external lines. When there is an incoming call and the phone starts to ring, the LED on the key will flash in red and the call can be picked up by pressing this key. This allows users to know if the line is occupied or not. The SLA function on the UCM6100 is like BLF but SLA is used to monitor external line i.e., analog trunk on the UCM6100. Users could configure the phone with BLF mode on the MPK to monitor the analog trunk status or press the line key pick up call from the analog trunk on the UCM6100.

Create/Edit SLA Station

SLA Station Delete Associated SLA Trunks \$ Station Name \$ Station \$ Options FXO1 1000 Telco1 🗹 💼 Figure 102: SLA Station Click on to add a SLA Station. to edit the SLA Station. The following table shows the SLA Station configuration parameters. Click on to delete the SLA Station. Click on **Table 59: SLA Station Configuration Parameters** Station Name Configure a name to identify the SLA Station. Station Specify a SIP extension as a station that will be using SLA. **Available SLA Trunks** Existing Analog Trunks with SLA Mode enabled will be listed here. Select a trunk for this SLA from the Available SLA Trunks list. Click on to arrange the order. If there are multiple trunks selected, when there are Selected SLA Trunks calls on those trunks at the same time, pressing the LINE key on the phone will pick up the call on the first trunk here. **SLA Station Options** Configure the time (in seconds) to ring the station before the call is considered **Ring Timeout** unanswered. No timeout is set by default. If set to 0, there will be no timeout.

SLA Station can be configured on Web GUI \rightarrow Extension/Trunk \rightarrow SLA Station.

Ring Delay	Configure the time (in seconds) for delay before ringing the station when a call first coming in on the shared line. No delay is set by default. If set to 0, there will be no delay.
Hold Access	This option defines the competence of the hold action for one particular trunk. If set to "open", any station could hold a call on that trunk or resume one held session; if set to "private", only the station that places the trunk call on hold could resume the session. The default setting is "open".

Sample Configuration

 On the UCM6100, go to Web GUI→Extension/Trunk→Analog Trunks page. Create analog trunk or edit the existing analog trunk. Make sure "SLA Mode" is enabled for the analog trunk. Once enabled, this analog trunk will be only available for the SLA stations created under Web GUI→Extension/Trunk→SLA Station page.

Edit Analog Trunk:	Telco1			Save
FXO Port:		[

Disable \$	Trunk Mode	Analog Ports	Options
no	sla	1	Ľ 💼
	Disable \$	Disable \$ Trunk Mode	Disable \$ Trunk Mode Analog Ports

Figure 104: Analog Trunk with SLA Mode Enabled

3. On the UCM6100, go to Web GUI→Extension/Trunk→SLA Station page, click on "Add". Please refer to section [Create/Edit SLA Station] for the configuration parameters. Users can create one or more SLA stations to monitor the analog trunk. The following figure shows two stations, 1002 and 1005, are configured to be associated with SLA trunk "fxo1".

Station Name \$	Station \$	Associated SLA Trunks 🗘	Options
SLA1	1005	Telco1	2 💼

- 4. On the SIP phone 1, configure to register UCM6100 extension 1002. Configure the MPK as BLF mode and the value must be set to "extension_trunkname", which is 1002_fxo1 in this case.
- 5. On the SIP phone 2, configure to register UCM6100 extension 1005. Configure the MPK as BLF mode and value must be set to "extension_trunkname", which is 1005_fxo1 in this case.

	Mode	Account	Description	Value	
MPK 1	Busy Lamp Field (BLF)	V Account 2 V	1005_fxo1	1005_fxo1	

Figure 106: SLA Example - MPK Configuration

Now the SLA station is ready to use. The following functions can be achieved by this configuration.

• Making an outbound call from the station/extension, using LINE key

When the extension is in idle state, pressing the line key for this extension on the phone to off hook. Then dial the station's extension number, for example, dial 1002 on phone 1 (or dial 1005 on phone 2), to hear the dial tone. Then the users could dial external number for the outbound call.

• Making an outbound call from the station/extension, using BLF key

When the extension is in idle state, pressing the MPK and users could dial external numbers directly.

• Answering call using LINE key

When the station is ringing, pressing the LINE key to answer the incoming call.

• Barging-in active call using BLF key

When there is an active call between an SLA station and an external number using the SLA trunk, other SLA stations monitoring the same trunk could join the call by pressing the BLF key if "Barge Allowed" is enabled for the analog trunk.

• Hold/UnHold using BLF key

If the external line is previously put on hold by an SLA station, another station that monitors the same SLA trunk could UnHold the call by pressing the BLF key if "Hold Access" is set to "open" on the analog trunk and the SLA station.

CALL ROUTES

Outbound Routes

In the following sections, we will discuss the steps and parameters used to configure and manage outbound rules in UCM6100, these rules are the regulating points for all external outgoing calls initiated by the UCM through all types of trunks: SIP, Analog and Digital.

Configuring Outbound Routes

In the UCM6100, an outgoing calling rule pairs an extension pattern with a trunk used to dial the pattern. This allows different patterns to be dialed through different trunks (e.g., "Local" 7-digit dials through a FXO while "Long distance" 10-digit dials through a low-cost SIP trunk). Users can also set up a failover trunk to be used when the primary trunk fails.

Go to Web GUI→Extension/Trunk→Outbound Routes to add and edit outbound rules.

- Click on + Add to add a new outbound route.
- Click on to edit the outbound route.
- Click on 🔟 to delete the outbound route.

On the UCM6100, the outbound route priority is based on "Best matching pattern". For example, the UCM6100 has outbound route A with pattern 1xxx and outbound route B with pattern 10xx configured. When dialing 1000 for outbound call, outbound route B will always be used first. This is because pattern 10xx is a better match than pattern 1xxx. Only when there are multiple outbound routes with the same pattern configured.

Calling Rule Name	Configure the name of the calling rule (e.g., local, long_distance, and etc). Letters, digits, _ and - are allowed.			
Pattern	 All patterns are prefixed with the "_". Special characters: X: Any Digit from 0-9. Z: Any Digit from 1-9. N: Any Digit from 2-9. ".": Wildcard. Match one or more characters. "!": Wildcard. Match zero or more characters immediately. Example: [12345-9] - Any digit from 1 to 9. Notes: Multiple patterns can be used. Each pattern should be entered in new line. Users can add comments to a dial plan by typing "<i>I</i>*" and "*<i>I</i>" before and after each comment respectively. 			

Table 60: Outbound Route Configuration Parameters

	 <u>Example:</u> _X. _NNXXNXXXX /* 10-digit long distance */ _818X. /* Any number with leading 818 */ 			
Disable This Route	After creating the outbound route, users can choose to enable and disable it. If the route is disabled, it will not take effect anymore. However, the route settings will remain in UCM. Users can enable it again when it's needed.			
Password	Configure the password for users to use this rule when making outbound calls.			
Call Duration Limit	Enable to configure the maximum duration for the call using this outbound route.			
Maximum Call Duration	Configure the maximum duration of the call (in seconds). The default setting is 0, which means no limit.			
Warning Time	Configure the warning time for the call using this outbound route. If set to x seconds, the warning tone will be played to the caller when x seconds are left to end the call.			
Warning Repeat Interval	Configure the warning repeat interval for the call using this outbound route. If set to X seconds, the warning tone will be played every x seconds after the first warning.			
Privilege Level	 Select privilege level for the outbound rule. Internal: The lowest level required. All users can use this rule. Local: Users with Local, National, or International level can use this rule. National: Users with National or International level can use this rule. International: The highest level required. Only users with international level can use this rule. Disable: The default setting is "Disable". If selected, only the matched source caller ID will be allowed to use this outbound route. Please be aware of the potential security risks when using "Internal" level, which means all users can use this outbound rule to dial out from the trunk. 			
Enable Filter on Source Caller ID	 When enabled, users could specify extensions allowed to use this outbound route. "Privilege Level" is automatically disabled if using "Enable Filter on Source Caller ID". The following two methods can be used at the same time to define the extensions as the source caller ID. Select available extensions/extension groups from the list. This allows users to specify arbitrary single extensions available in the PBX. Custom Dynamic Route: define the pattern for the source caller ID. This allows users to define extension range instead of selecting them one by one. 			

	 All patterns are prefixed with the "_". Special characters: X: Any Digit from 0-9. Z: Any Digit from 1-9. N: Any Digit from 2-9. ".": Wildcard. Match one or more characters. "!": Wildcard. Match zero or more characters immediately. Example: [12345-9] - Any digit from 1 to 9. Note: Multiple patterns can be used. Patterns should be separated by comma ",". Example: _X., _NNXXNXXXXX, _818X.
Send This Call Throug	
Use Trunk	Select the trunk for this outbound rule.
	Allows the user to specify the number of digits that will be stripped from the beginning of the dialed string before the call is placed via the selected trunk. <u>Example:</u>
Strip	The users will dial 9 as the first digit of a long-distance calls. However, 9 should not be sent out via analog lines and the PSTN line. In this case, 1 digit should be stripped before the call is placed.
Prepend	Specify the digits to be prepended before the call is placed via the trunk. Those digits will be prepended after the dialing number is stripped.
Use Failover Trunk	
Failover Trunk	Failover trunks can be used to make sure that a call goes through an alternate route, when the primary trunk is busy or down. If "Use Failover Trunk" is enabled and "Failover trunk" is defined, the calls that cannot be placed via the regular trunk may have a secondary trunk to go through. UCM61XX support up to 10 failover trunks. Example:
	The user's primary trunk is a VoIP trunk and the user would like to use the PSTN when the VoIP trunk is not available. The PSTN trunk can be configured as the failover trunk of the VoIP trunk.
0	Allows the user to specify the number of digits that will be stripped from the beginning of the dialed string before the call is placed via the selected trunk. <u>Example:</u>
Strip	The users will dial 9 as the first digit of a long-distance calls. However, 9 should not be sent out via analog lines and the PSTN line. In this case, 1 digit should be stripped before the call is placed.
Prepend	Specify the digits to be prepended before the call is placed via the trunk. Those digits will be prepended after the dialing number is stripped.

_		
Time	Cond	lition
	COLLO	

Time Condition

Users could customize holiday time, office time or a specified time to allow the outbound route to be used.

Outbound Blacklist

The UCM6100 allows users to configure blacklist for outbound routes. If the dialing number matches the blacklist numbers or patterns, the outbound call will not be allowed. The outbound blacklist can be configured under UCM Web GUI→Extension/Trunk→Outbound Routes: Outbound Blacklist.

Users can configure numbers, patterns or select country code to add in the blacklist. Please note that the blacklist settings apply to all outbound routes.

Outbound Blacklist				Cancel
The blacklist (based on Cal	leeID) is used for all outbound routes			
Country Codes:	 North America South America Europe Asia and the Middle East Africa Oceania 	 North America United States 1201 120 Canada 1204 1226 Anguilla 1264 Antigua and Barbuda 1264 Bahamas 1242 Barbados 1246 	1236 1249 10+

	Blacklist File:	Choose File to Upload	
	* Add Blacklist Rule :		+
	Blacklist list	elete Export	

PIN Groups

The UCM6100 supports pin group. Once this feature is configured, users can apply pin group to specific outbound routes. When placing a call on pin protected outbound routes, caller will be asked to input the group pin number, this feature can be found on the webGUI→Extension/Trunk→Outbound Routes→PIN Groups.

Table 61: Outbound Routes/PIN Group

Name	Specify the name of the group
Record In CDR	Specify whether to enable/disable record in CDR
PIN Number	Specify the code that will asked once dialing via a trunk
PIN Name	Specify the name of the PIN

Once user click on **PIN Groups** the following figure shows to configure the new PIN.

Figure 116: CSV File Successful Upload

Inbound Routes

Inbound routes can be configured via Web GUI→Extension/Trunk→Inbound Routes.

- Click on + Add to add a new inbound route.
- Click on "Blacklist" to configure blacklist for all inbound routes.
- Click on 🖾 to edit the inbound route.
- Click on ^{III} to delete the inbound route.

Inbound Rule Configurations

-	Table 62: Inbound Rule Configuration Parameters		
Trunks	Select the trunk to configure the inbound rule.		
Trunks Pattern	 All patterns are prefixed with the "_". All patterns are prefixed with the "_". Special characters: X: Any Digit from 0-9. Z: Any Digit from 1-9. N: Any Digit from 2-9. ".": Wildcard. Match one or more characters. "!": Wildcard. Match zero or more characters immediately. Example: [12345-9] - Any digit from 1 to 9. The pattern can be composed of two parts, <i>Pattern</i> and <i>CallerID Pattern</i>. The first part is used to specify the dialed number while the second part is used to specify the caller ID and it is optional, if set it means only the extension with the specific caller ID can call in or call out. For example, pattern '_2XXX/1234' means the only extension with the caller ID '1234' can use this rule. Notes: Multiple patterns can be used. Each pattern should be entered in new line. Users can add comments to a dial plan by typing "/*" and "*/" before and after each comment respectively. Example: Pattern CallerID Pattern 		
	_X. _NNXXNXXXXX /* 10-digit long distance */ _818X. /* Any number with leading 818 */	1000 1001	
Disable This Route	After creating the inbound route, users can choose to enable and disable it. If the route is disabled, it will not take effect anymore. However, the route settings will remain in UCM. Users can enable it again when it's needed.		
Prepend Trunk Name	Prepend trunk name to display.		
Prepend User Defined Name	Prepend a user defined name to display name.		
Alert-Info	Configure the Alert-Info, when UCM6100 receives an INVITE request, the Alert-Info header field specifies an alternative ring tone to the UAS.		
Allowed to Seamless Transfer Allows the selected extension to use this function. If an extension is busy mobile phone is bound to that extension, the mobile phone can pick up calls extension.			

Inbound MultipleMultiple mode allows user to switch between destinations of the intervenceInbound Multiplefeature codes. Configure related feature codes as described in [InbModeMultiple Mode]. If this option is enabled, user can use feature codesbetween different destinations.		
Dial TrunkThis option shows up only when "By DID" is selected. If enabled, the extern dialing in to the trunk via this inbound route can dial outbound call u UCM6100's trunk.		
Privilege Level	 Disable: Only the selected Extensions or Extension Groups are allowed to use this rule, when enabled Filter on Source Caller ID. Internal: The lowest level required. All users are allowed to use this rule, check this level might be risky for security purpose. Local: User with Local level, National or International level are allowed to use this rule. National: Users with National or International Level are allowed to use this rule. International: The highest level required. Only users with international level are allowed to use this rule. 	
Allowed DID Destination	 This option shows up only when "By DID" is selected. This controls the destination that can be reached by the external caller via the inbound route. The DID destination are: Extension Conference Call Queue Ring Group Paging/Intercom Groups IVR Voicemail Groups Fax Extension Dial By Name All 	
Default Destination	 Select the default destination for the inbound call. Extension Voicemail Conference Room Queue 	

	 Ring Group Paging/Intercom Voicemail Group Fax DISA IVR Dial by Name External Number By DID When "By DID" is used, the UCM6100 will look for the destination based on the number dialed, which could be local extensions, conference, call queue, ring group, paging/intercom group, IVR, voicemail groups and Fax extension as configured in "DID destination". If the dialed number matches the DID pattern, the call will be allowed to go through.
Strip	Configure the number of digits to be stripped from the beginning of the DID. This option shows up only when "By DID" is selected.
Prepend	Configure the number of digits to be prepended to an inbound DID pattern, with strip taking precedence over prepend.
Time Condition	
Time Conditions	Select the time condition for the inbound rule.
Destination	Select the destination for the inbound call during the specified time condition.

Inbound Route: Prepend Example

UCM6100 now allows user to prepend digits to an inbound DID pattern, with strip taking precedence over prepend. With the ability to prepend digits in inbound route DID pattern, user no longer needs to create multiple routes for the same trunk to route calls to different extensions. The following example demonstrates the process:

- 1. If Trunk provides a DID pattern of 18005251163.
- 2. If **Strip** is set to 8, UCM6100 will strip the first 8 digits.
- 3. If **Prepend** is set to 2, UCM6100 will then prepend a 2 to the stripped number, now the number become 2163.
- 4. UCM6100 will now forward the incoming call to extension 2163.

Figure 118: Inbound Route - Multiple Mode

Set Global Inbound Mode

under

When Multiple Mode is enabled for the inbound route, the user can configure a "Default Destination" and a "Mode 1" destination for this route. By default, the call coming into this inbound route will be routed to the default destination.

SIP end devices that have registered on the UCM6100 can dial feature code *62 to switch to inbound route "Mode 1" and dial feature code *61 to switch back to "Default Destination". Switching between different mode can be easily done without Web GUI login.

For example, the customer service hotline destination has to be set to a different IVR after 7PM. The user can dial *62 to switch to "Mode 1" with that IVR set as the destination before off work.

To customize feature codes for "Default Mode" and "Mode 1", click on

"Inbound Routes" page, check "Enable Inbound Multiple Mode" option and change "Inbound Default Mode" and "Inbound Mode 1" values (By default, *61 and *62 respectively).

Set Global Inbound N	Set Global Inbound Mode			
Caution: Disabling Inbound	d Multiple Mode will switch the inbound mode to default mode.			
Enable Inbound Multiple				
Mode:				
Inbound Mode:	Default Mode v			
* Inbound Default Mode :	*61			
* Inbound Mode 1:	*62			

Figure 119: Inbound Route - Multiple Mode Feature Codes

Inbound Route: Inbound Mode BLF Monitoring

2.

Users can assign MPKs and VPKs to monitor and toggle the current global inbound mode of the UCM. To do this, please refer to the following steps:

- 1. Access the UCM web GUI and navigate to Extension/Trunk->Inbound Routes.
 - Click on the

button and enable Inbound Multiple Mode.

3. Edit the subscribe number field to the desired BLF value.

Set Global Inbour	Set Global Inbound Mode			
Caution: Disabling	Inbound Multi	ple Mode will switch the inbound mode to default mode.		
Enable Inbound Mu	Itiple 🔽			
Mode:				
Inbound Mode:	Defa	ult Mode v		
* Inbound Default Mo	ode: *61			
* Inbound Mode 1:	*62			
BLF Subscription N	umber: 777			

Figure 120: Global Inbound Mode

4. Configure the BLF value on a phone's MPK/VPK. As an example, a GXP2140 with the BLF configured will show the Inbound Mode status on its screen once configured. The 777 BLF is lit green, indicating that the current inbound mode is "Default Mode".

Figure 121 : Inbound Mode - Default Mode

5. Pressing the key will toggle the inbound mode to "Mode 1", and the button's color will change to red.

Figure 122 : Inbound Mode - Mode 1

Inbound Route: Import/Export Inbound Route

Users can now import and export inbound routes to quickly set up inbound routing on a UCM or to back up an existing configuration. An exported inbound route configuration can be directly imported without needing any manual modifications.

Inbo	ound Routes				
+ A0	dd 🛛 🕅 Blacklist	Set Global Inbound M	ode 🔓 Import	🕞 Export	
Trunks:	SIP Trunks 641	~			
	Pattern 🗢	CallerID Pattern ≑	Global Inbound M ode	Time Condit	ion Time
				No	Data

Figure 123: Import/Export Inbound Route

The imported file should be on CSV format and using UTF-8 encoding, the imported file should contain below columns, and each column should be separated by a comma (It is recommended to use Notepad++ for the imported file creation):

- Disable This Route: Yes/No.
- Pattern: Always prefixed with _
- CallerID Pattern: Always prefixed with _
- Prepend Trunk Name: Yes/No.
- Prepend User Defined Name Enable: Yes/No.
- Prepend User Defined Name: A string.
- Alert-info: None, Ring 1, Ring 2... User should enter an Alert-info string following the values we have in the Inbound route Alert-Info list.
- Allowed to seamless transfer: [Extension_number]
- Inbound Multiple Mode: Yes/No.
- Default Destination: By DID, Extension, Voicemail... User should enter a Default Destination string following the values we have in the Inbound route Default Destination list.
- Destination: An Extension number, Ring Group Extension...
- Default Time Condition.
- Mode 1: By DID, Extension, Voicemail... User should enter a Default Destination string following the values we have in the mode 1 Default Destination list.
- Mode 1 Destination: An Extension number, Ring Group Extension...
- Mode 1 Time Condition.

FAX Intelligent Route

The UCM6100 can automatically detect Fax and phone signal coming from the FXO port, and then forward Fax or phone signal to the right destination. For example, when a regular phone call is coming, the UCM6100 will be able to detect the phone signal and forward it through the correct inbound route to the destination; if Fax signal is coming, the UCM6100 will be able to forward it to the FXS extension where the Fax machine is connected.

FAX with Two Media

The UCM6100 supports Fax re-INVITE with multiple codec negotiation. If a Fax re-INVITE contains both T.38 and PCMA/PCMU codec, UCM6100 will choose T.38 codec over PCMA/PCMU.

Blacklist Configurations

In the UCM6100, Blacklist is supported for all inbound routes. Users could enable the Blacklist feature and manage the Blacklist by clicking on "Blacklist".

- Select the checkbox for "Blacklist Enable" to turn on Blacklist feature for all inbound routes. Blacklist is disabled by default.
- Enter a number in "Add Blacklist Number" field and then click ⁺ to add to the list. Anonymous can also be added as a Blacklist Number.
- To remove a number from the Blacklist, select the number in "Blacklist list" and click on \square or click on

Delete All button to remove all the numbers on the black list.

User can also export the inbound route black list by pressing on
 Description

5					

Figure 125: Blacklist csv File

▲ Note:

Users could also add a number to the Blacklist or remove a number from the Blacklist by dialing the feature code for "Blacklist Add' (default: *40) and "Blacklist Remove" (default: *41) from an extension. The feature code can be configured under Web GUI→Call Features→Feature Codes.

CONFERENCE ROOM

The UCM6100 supports conference room allowing multiple rooms used at the same time:

- UCM6102/6104 supports up to 3 conference rooms allowing up to 25 simultaneous PSTN or IP participants.
- UCM6108/UCM6116 supports up to 6 conference rooms allowing up to 32 simultaneous PSTN or IP participants.

The conference room configurations can be accessed under Web $GUI \rightarrow Call Features \rightarrow Conference$. In this page, users could create, edit, view, invite, manage the participants and delete conference rooms. The conference room status and conference call recordings (if recording is enabled) will be displayed in this web page as well.

Conference Room Configurations

- Click on "Create New Conference Room" to add a new conference room.
- Click on \square to edit the conference room.
- Click on III to delete the conference room.

Table 63: Conference Room Configuration Parameters Configure the conference number for the users to dial into the conference. Extension Note: Up to 64 characters. When configured, the users who would like to join the conference call must enter this password before accessing the conference room. Note: Password If "Public Mode" is enabled, the password is not required to join the conference • room thus this field is invalid. The password must be at least 4 characters. • Configure the password to join the conference room as administrator. Conference administrator can manage the conference call via IVR (if "Enable Caller Menu" is enabled) as well as invite other parties to join the conference by dialing "0" (permission required from the invited party) or "1" (permission not required from **Admin Password** the invited party) during the conference call. Note: If "Public Mode" is enabled, the password is not required to join the conference room thus this field is invalid.

	• Password must be at least 4 characters and different than conference extension number.
Enable Caller Menu	If enabled, conference participant could press the * key to access the conference room menu. The default setting is "No".
Record Conference	If enabled, the calls in this conference room will be recorded automatically in a .wav format file. All the recording files will be displayed and can be downloaded in the conference web page. The default setting is "No".
Quiet Mode	If enabled, if there are users joining or leaving the conference, voice prompt or notification tone won't be played. The default setting is "No". Note: "Quiet Mode" and "Announce Callers" cannot be enabled at the same time.
Wait For Admin	If enabled, the participants will not hear each other until the conference administrator joins the conference. The default setting is "No". Note: If "Quiet Mode" is enabled, the voice prompt for "Wait For Admin" will not be announced.
Enable User Invite	If enabled, users could press 0 to invite other users (with the users' permission) or press 1 to invite other users (without the user's permission) to join the conference. The default setting is "No". Note: Conference administrator can always invite other users without enabling this option.
Announce Callers	If enabled, the caller will be announced to all conference participants when there the caller joins the conference. The default setting is "No". Note: "Quiet Mode" and "Announce Callers" cannot be enabled at the same time.
Public Mode	If enabled, no authentication will be required when joining the conference call. The default setting is "Yes".
Play Hold Music	If enabled, the UCM6100 will play Hold music when there is only one user in the conference. The default setting is "No".
Music On Hold	Select the music on hold class to be played in conference call. Music On Hold class can be set up under Web GUI →PBX Settings→Music On Hold .

Skip Authentication When Inviting User via Trunk from Web GUI

If enabled, the invitation from Web GUI for a conference room with password will skip the authentication for the invited users. The default setting is "No".

Conference Settings contains the following options:

Table 64: Conference Settings Enable Talk detection If enabled, the AMI will send the corresponding event when a user starts or ends talking. **DSP Talking Threshold** The time in milliseconds of sound above what the dsp has established as base line silence for a user before a user is considered to be talking. This value affects several operations and should not be changed unless the impact on call quality is fully understood, the default value is 128. **DSP Silence Threshold** The time in milliseconds of sound falling within the what the dsp has established as base line silence before a user is considered to be silent. This value affects several operations and should not be changed unless the impact on call quality is fully understood, the default value is 2500.

Users can check the talking Caller IDs in conference control page (UCM WebUI \rightarrow Call Features \rightarrow Conference). The image will move up and down when the user is talking.

Figure 126: Conference

Join a Conference Call

Users could dial the conference room extension to join the conference. If password is required, enter the password to join the conference as a normal user, or enter the admin password to join the conference as administrator.

Invite Other Parties to Join Conference

When using the UCM6100 conference room., there are two ways to invite other parties to join the conference.

• Invite from Web GUI.

For each conference room in UCM6100 Web GUI \rightarrow **Call Features** \rightarrow **Conference**, there is an icon $\stackrel{2}{\rightarrow}$ for option "Invite a participant". Click on it and enter the number of the party you would like to invite. Then click on "Add". A call will be sent to this number to join it into the conference.

Invitation	×
* Participant's Extensi 1003	
Require Confirmation	
Cancel	

Figure 127: Conference Invitation from Web GUI

• Invite by dialing 0 or 1 during conference call.

A conference participant can invite other parties to the conference by dialing from the phone during the conference call. Please make sure option "Enable User Invite" is turned on for the conference room first. Enter 0 or 1 during the conference call. Follow the voice prompt to input the number of the party you would like to invite. A call will be sent to this number to join it into the conference.

0: If 0 is entered to invite other party, once the invited party picks up the invitation call, a permission will be asked to "accept" or "reject" the invitation before joining the conference.

1: If 1 is entered to invite other party, no permission will be required from the invited party.

▲ Note:

Conference administrator can always invite other parties from the phone during the call by entering 0 or 1. To join a conference room as administrator, enter the admin password when joining the conference. A conference room can have multiple administrators.

During The Conference

During the conference call, users can manage the conference from Web GUI or IVR.

• Manage the conference call from Web GUI.

Log in UCM6100 Web GUI during the conference call, the participants in each conference room will be listed.

- 1. Click on $\frac{1}{2}$ to kick a participant from the conference.
- 2. Click on 🧖 to mute the participant.
- 3. Click on to lock this conference room so that other users cannot join it anymore.
- 4. Click on $^{\mathbb{P}_{+}}$ to invite other users into the conference room.
- Manage the conference call from IVR.

If "Enable Caller Menu" is enabled, conference participant can input * to enter the IVR menu for the conference. Please see options listed in the table below.

Table 65: Conference Caller IVR Menu

4	Decrease the volume of the conference call.
5	Decrease your volume.
6	Increase the volume of the conference call.
7	Increase your volume.
8	Exit the caller menu and return to the conference.

▲ Note:

When there is participant in the conference, the conference room configuration cannot be modified.

Conference Schedule Configuration

Conference Schedule can be found under UCM6100 Web GUI \rightarrow Call Features \rightarrow Conference \rightarrow Conference Schedule. Users can create, edit, view and delete a Conference Schedule.

- Click on "Create New Conference Schedule" to add a new Conference Schedule.
- Click on the scheduled conference to edit or delete the event.

After the user configures UCM6100 with Google Service Settings **[Google Service Settings Support]** and enables Google Calendar for Conference Schedule, the conference schedule on the UCM6100 can be synchronized with Google Calendar for authorized Google account.

Table 66: Conference Schedule Parameters

Schedule Options

Configure the name of the scheduled conference. Letters, digits, $_$ and - are allowed.		
Select a conference room for this scheduled conference.		
Set kick time before conference starts. When kick time is reached, a warning prompt will be played for all attendees in the conference room. After 5 minutes, this conference room will be cleared and locked for the scheduled conference to begin. Note: Kick Time cannot be less than 6 minutes to clear the conference room.		
The description of scheduled conference.		
Repeat interval of scheduled conference. By default, it's set to single event.		
Configure the beginning date and duration of scheduled conference. Note: Please pay attention to avoid time conflict on schedules in the same conference room.		
Select this option to sync scheduled conference with Google Calendar. Note: Google Service Setting OAuth2.0 must be configured on the UCM6100. Please refer to section <i>[Google Service Settings Support]</i> .		
rence Select the administrator of scheduled conference from selected extensions. histrator Note: "Public Mode" must be disabled from Conference Room Options tab.		
Select available extensions from the list to attend scheduled conference.		
Select available extensions from the remote peer PBX. Note: "LDAP Sync" must be enabled on the UCM6100 to view remote extensions.		
Add extensions that are not in the list (both local and remote list). If the user wishes to add the special extension, please match the pattern on the outbound route.		
Invite a remote conference.		
Conference Room Options		
Configure conference room password. Please note that if "Public Mode" is enabled, this option is automatically disabled.		
Configure the password to join as conference administrator. Please note that if "Public Mode" is enabled, this option is automatically disabled.		
If this option is enabled, conference participants will be able to access conference room menu by pressing the * key.		

Record Conference	If this option is enabled, conference call will be recorded in .wav format. The
	recorded file can be found from Conference page.
Quiet Mode	If this option is enabled, the notification tone or voice prompt for joining or leaving the conference won't be played. Note: Option "Quiet Mode" and option "Announce Caller" cannot be enabled at the same time.
Wait For Admin	If this option is enabled, the participants in the conference won't be able to hear each other until conference administrator joins the conference. Note: If "Quiet Mode" is enabled, voice prompt for this option won't be played.
Enable User Invite	 If this option is enabled, the user can: Press '0' to invite others to join the conference with invited party's permission Press '1' to invite without invited party's permission Press '2' to create a multi-conference room to another conference room Press '3' to drop all current multi-conference rooms. Note: Conference Administrator is always allowed to access this menu.
Announce Callers	If this option is enabled, when a participant joins the conference room, participant's name will be announced to all members in the conference room. Note: Option "Quiet Mode" and option "Announce Caller" cannot be enabled at the same time.
Public Mode	If this option is enabled, no authentication is required for entering the conference room. Note: Please be aware of the potential security risks when turning on this option.
Play Hold Music	If this option is enabled, UCM6100 will play Hold Music while there is only one participant in the conference room or the conference is not yet started.
Skip Authentication When Inviting Users via Trunk from Web GUI	If this option is enabled, the invitation from Web GUI via a trunk with password won't require authentication. Note: Please be aware of the potential security risks when turning on this option.

• Cleaner Options

Cleaner Options	
Enable Conference Schedules Cleaner	If this option is enabled, conference schedules will be automatically cleaned as configured.
Conference Schedules Clean Time	Enter the clean time (in hours). The valid range is from 0 to 23.
Clean Interval	Enter the clean interval (in days). The valid range is from 1 to 30.

• Show/hide Conference Schedule Table

Enable this option will allow Web GUI to display scheduled conference in Conference Schedule Table. Please see figure below.

Figure 128: Conference Schedule

Once the conference room is scheduled, at the kick time, all users will be removed from conference room and no extension can join the conference room anymore. At the scheduled conference time, UCM6100 will send INVITE to the extensions that have been selected for conference.

▲ Note:

- Please make sure that outbound route is properly configured for remote extensions to join the conference.
- Once Kick Time is reached, Conference Schedule is locked and cannot be modified.

Google Service Settings Support

UCM6100 now supports Google OAuth 2.0 authentication. This feature is used for supporting UCM6100 conference scheduling system. Once OAuth 2.0 is enabled, UCM6100 conference system can access Google calendar to schedule or update conference.

Google Service Settings can be found under Web GUI \rightarrow Call Features \rightarrow Conference \rightarrow Google Service Settings.

OAuth2.0 Authentication	
* OAuth2.0 Client ID :	
* OAuth2.0 Client Secret:	
	Save Reset

Figure 129: Google Service Settings→OAuth2.0 Authentication

If you already have OAuth2.0 project set up on **Google Developers** web page, please use your existing login credential for "OAuth2.0 Client ID" and "OAuth2.0 Client Secret" in the above figure for the UCM6100 to access Google Service.

If you do not have OAuth2.0 project set up yet, please following the steps below to create new project and obtain credentials:

1. Go to Google Developers page <u>https://console.developers.google.com/start</u> Create a New Project in Google Developers page.

New Project	
Project name 📀	
OAuthTest	
Your project ID will be animated-surfer-112001 🕜 Edit	
Show advanced options	
Please email me updates regarding feature announcements, performance suggestions, feedback surveys and special offers.	
● Yes ◯ No	
I agree that my use of any services and related APIs is subject to my compliance with the applicable Terms of Service.	
Create Cancel	

Figure 130: Google Service→New Project

- 2. Enable Calendar API from API Library.
- 3. Click "Credentials" on the left drop down menu to create new OAuth2.0 login credentials.

Google Developers Console	OAuthTest 🔻
Home Permissions APIs & auth APIs Credentials Push Monitoring Source Code Deploy & Manage Compute Networking Storage Big Data	API Library Enabled APIs (8) Some APIs are enabled automatically. You can disable them if you're not using their services. API ^ BigQuery API Calendar API Cloud Debugger API Debuglet Controller API Google Cloud Logging API Google Cloud SQL Google Cloud Storage Google Cloud Storage JSON API

Figure 131: Google Service→Create New Credential

- 4. Use the newly created login credential to fill in "OAuth2.0 Client ID" and "OAuth2.0 Client Secret".
- 5. Click "Get Authentication Code" to obtain authentication code from Google Service.

Google Calendar Authorization
1 1.Click "Get Authorization Code". Get Authorization Code
2 2.Enter the Google account and password (Note: please make sure the account on authorization page is correct, if you have logged in other account, ple log out then log in again).
3 3.Click "Accept" on authorization page.
4.Copy the string to the Authorization Code input box, click the "authorize" button.
* Authorization Code: Authorization

Figure 132: Google Service→OAuth2.0 Login

6. Now UCM6100 is connected with Google Service.

You can also configure the Status update, which refresh automatically your Google Calendar with the configured time (m). **Note:** Zero means disable.

Record Conference

The UCM6100 allows users to record the conference call and retrieve the recording from Web GUI→Call Features→Conference→Conference Recordings.

To record the conference call, when the conference room is in idle, enable "Record Conference" from the conference room configuration dialog. Save the setting and apply the change. When the conference call starts, the call will be automatically recorded in .wav format.

The recording files will be listed as below once available. Users could click on \checkmark to download the recording or click on to delete the recording. Users could also delete all recording files by clicking on "Delate All Recording Files", or delete multiple recording files at once by clicking on "Delete Selected Recording Files" after selecting the recording files.

Figure 133: Conference Recording

IVR

Configure IVR

IVR configurations can be accessed under the UCM6100 Web GUI \rightarrow Call Features \rightarrow IVR. Users could create, edit, view and delete an IVR.

- Click on "Create New IVR" to add a new IVR.
- Click on 🖾 to edit the IVR configuration.
- Click on ¹ to delete the IVR.

Figure 134: Create New IVR

Table 67: IVR Configuration Parameters

Basic Settings				
Name	Configure the name of the IVR. Letters, digits, _ and - are allowed.			
Extension	Enter the extension number for users to access the IVR.			
Dial Trunk	If enabled, all callers to the IVR can use trunk. The permission must be configured for the users to use the trunk first. The default setting is "No".			
Permission	Assign permission level for outbound calls if "Dial Trunk" is enabled. The available permissions are "Internal", "Local", "National" and "International" from the lowest level to the highest level. The default setting is "Internal". If the user tries to dial outbound calls after dialing into the IVR, the UCM6100 will compared the IVR's permission level with the outbound route's privilege level. If the IVR's permission level is higher than (or equal to) the outbound route's privilege level, the call will be allowed to go through.			
Dial Other Extensions	 This controls the destination that can be reached by the external caller via the inbound route. The available destinations are: Extension Conference Call Queue Ring Group Paging/Intercom Groups Voicemail Groups Fax Extension Dial by Name 			
IVR Black/White List	If enabled only numbers inside of the White List or outside of the Black List can be called from IVR.			
Internal Black/White List	Contain numbers, either of Black List or White List.			
External Black/White List	This feature can be used only when Dial Trunk is enabled, it contains external numbers allowed or denied calling from the IVR, the allowed format is the following: Number1, number2, number3,			
Replace Caller ID	If enabled, the UCM will replace the caller display name with the IVR name the caller know whether the call is incoming from a direct extension or an IVR.			
Alert Info	When present in an INVITE request, the alert-Info header field specifies and alternative ring tone to the UAS.			
Welcome Prompt	Select an audio file to play as the welcome prompt for the IVR. Click on "Prompt" to add additional audio file under Web GUI→PBX Settings→Voice Prompt→Custom Prompt.			

Configure the timeout between digit entries. After the user enters a digit, the user needs to enter the next digit within the timeout. If no digit is detected within the timeout, the UCM6100 will consider the entries complete. The default timeout is 3s.			
After playing the prompts in the IVR, the UCM6100 will wait for the DTMF entry within the timeout (in seconds). If no DTMF entry is detected within the timeout, a timeout prompt will be played. The default setting is 10 seconds.			
Select the prompt message to be played when timeout occurs.			
Select the prompt message to be played when an invalid extension is pressed.			
Configure the number of times to repeat the prompt if no DTMF input is detected. When the loop ends, it will go to the timeout destination if configured, or hang up. The default setting is 3.			
Configure the number of times to repeat the prompt if the DTMF input is invalid. When the loop ends, it will go to the invalid destination if configured, or hang up. The default setting is 3.			
Select the voice prompt language to be used for this IVR. The default setting is "Default" which is the selected voice prompt language under Web $GUI \rightarrow PBX$ Settings \rightarrow Voice Prompt \rightarrow Language Settings. The dropdown list shows all the current available voice prompt languages on the UCM6100. To add more languages in the list, please download voice prompt package by selecting "Check Prompt List" under Web $GUI \rightarrow PBX$ Settings \rightarrow Voice Prompt \rightarrow Language Settings.			
3			
 Select the event for each key pressing for 0-9, *, Timeout and Invalid. The event options are: Extension Voicemail Conference Rooms Voicemail Group IVR Ring Group Queues Page Group Fax Custom Prompt Hangup DISA Dial by Name External Number Callback 			

TimeoutWhen exceeding the number of defined answer timeout, IVR will enter the
configured event when timeout. If not configured, then it will Hangup.InvalidConfigure the destination when the Invalid Repeat Loop is done.

Black/White List in IVR

In some scenarios, the IPPBX administrator needs to restrict the extensions that can be reached from IVR. For example, the company CEO and directors prefer only receiving calls transferred by the secretary, some special extensions are used on IP surveillance end points which shouldn't be reached from external calls via IVR for privacy reason. UCM has now added blacklist and whitelist in IVR settings for users to manage this.

Note: up to 500 extensions are allowed on the back/white list.

To use this feature, log in UCM Web GUI and navigate to **Call Features**→**IVR**→Create/Edit IVR: IVR Black/White List.

• If the user selects "Blacklist Enable" and adds extension in the list, the extensions in the list will not be allowed to be reached via IVR.

• If the user selects "Whitelist Enable" and adds extension in the list, only the extensions in the list can be allowed to be reached via IVR.

Create Custom Prompt

To record new IVR prompt or upload IVR prompt to be used in IVR, click on "Prompt" next to the "Welcome Prompt" option and the users will be redirected to Custom Prompt page. Or users could go to Web GUI→PBX Settings→Voice Prompt→Custom Prompt page directly.

Alert-info :	None	~	
* Prompt:	welcome	~	Prompt

Figure 137: Click on Prompt to Create IVR Prompt

Once the IVR prompt file is successfully added to the UCM6100, it will be added into the prompt list options for users to select in different IVR scenarios.

LANGUAGE SETTINGS FOR VOICE PROMPT

The UCM6100 supports multiple languages in Web GUI as well as system voice prompt. Currently, there are 16 languages supported in system voice prompt: *English (United States), Arabic, Chinese, Dutch, English (United Kingdom), French, German, Greek, Hebrew, Italian, Polish, Portuguese, Russian, Spanish, Swedish and Turkish.*

English (United States) and Chinese voice prompts are built in with the UCM6100 already. The other languages provided by Grandstream can be downloaded and installed from the UCM6100 Web GUI directly. Additionally, users could customize their own voice prompts, package them and upload to the UCM6100.

Language settings for voice prompt can be accessed under Web GUI→PBX Settings→Voice Prompt→Language Settings.

Download and Install Voice Prompt Package

To download and install voice prompt package in different languages from UCM6100 Web GUI, click on "Check Prompt List" button.

	Allow User Review	If enabled, users can review the message following the IVR before sending.

Voicemail Remote Access	 If enabled, external callers routed by DID and reaching VM will be prompted by the UCM with 2 options: <i>Press 1 to leave a message.</i> To leave a message for the extension reached by DID. <i>Press 2 to access voicemail management system.</i> This will allow caller to access any extension VM after entering extension number and its VM password. Note: This option applies to inbound call routed by DID only. The default setting is "Disabled".
Forward Voicemail to Peered UCMs	Enables the forwarding of voicemail to remote extensions on peered SIP trunks. The default setting is "Disabled".
Voicemail Password	Configures the Voicemail password that will be used for extensions that are reset.

Note: Resetting an extension will reset Voicemail Password, Send Voicemail to Email, and Keep Voicemail after Emailing values to default. Previous custom voicemail prompts and messages will be deleted.

Access Voicemail

If the voicemail is enabled for UCM6100 extensions, the users can dial the voicemail access number (by default *97) to access their extension's voicemail. The users will be prompted to enter the voicemail password and then can enter digits from the phone keypad to navigate in the IVR menu for different options.

Otherwise the user can dial the voicemail access code (by default *98) followed by the extension number and password in order to access to that specific extension's voicemail.

Leaving Voicemail

If an extension has voicemail enabled under basic settings "**Extension/Trunk** \rightarrow **Extensions** \rightarrow **Basic Settings**" and after a ring timeout or user not available, the caller will be automatically redirected to the voicemail in order to leave a message on which case they can press # in order to submit the message.

In case if the caller is calling from an internal extension, they will be directly forwarded to the extension's voicemail box. But if the caller is calling from outside the system and the incoming call is routed by DID to the

destination extension, then the caller will be prompted with the choice to either press1 to access voicemail management or press 2 to leave a message for the called extension. This feature could be useful for remote voicemail administration.

Extension Voicemail Count

The UCM6100 provides an easy way to check the number of voicemail messages for each extension directly from UCM web GUI \rightarrow Extension/Trunk \rightarrow Extensions overview page.

Voicemail count ("Message" column) is displayed in the format Urgent / Unread / Read.

anage E	xtensions

• Click on 🛅 to del	ete the ring group				
		Table 72: Ring Group Pa			
Ring Group Name	Configure are allowe	•••	dentify the ring group. Letters,	digits, _ and –	
Extension	Configure	Configure the ring group extension.			
Members		Select available users from the left side to the ring group member list on the right side. Click on 🔼 💟 to arrange the order.			
LDAP PhonebookSelect available remote users from the left side to the ring group member list on the right side. Click on 					
Ring Strategy	 Select the ring strategy. The default setting is "Ring in order". Ring simultaneously. Ring all the members at the same time when there is incoming call to the ring group extension. If any of the member answers the call, it will stop ringing. 				

Ring group settings can be accessed via Web GUI**→Call Features→Ring Group**.

	• Ring in order. Ring the members with the order configured in ring group list. If the first member doesn't answer the call, it will stop ringing the first member and start ringing the second member.			
Music On Hold	Select the "Music On Hold" Class of this Ring Group, "Music On Hold" can be managed from the "Music On Hold" panel on the left.			
Custom Prompt	This option is to set a custom prompt for a ring group to announce to caller. Click on 'Prompt', it will direct the users to upload the customized voice prompts. Note: Users can also refer to the page PBX Settings→Voice Prompt→Custom Prompt, where they could record new prompt or upload prompt files.			
Ring Timeout on Each Member	Configure the number of seconds to ring each member. If set to 0, it will keep ringing. The default setting is 30 seconds. Note: The actual ring timeout might be overridden by users if the phone has ring timeout settings as well.			
Auto Record	If enabled, calls on this ring group will be automatically recorded. The default setting is No. The recording files can be accessed from Web GUI →CDR→Recording Files .			
Endpoint Call Forwarding Support	 This allows the UCM to work with endpoint-configured call forwarding settings to redirect calls to ring group. For example, if a member wants to receive calls to the ring group on his mobile phone, he would have to set his endpoint's call forwarding settings to his mobile number. By default, it's disabled. Note: However, this feature has the following limitations: This feature will work only when call forwarding is configured on endpoints, not on the UCM. If the forwarded call goes through an analog trunk, and polarity reversal is disabled, the other ring group members will no longer receive the call after it is forwarded. If the forwarded call goes through a VoIP trunk, and the outbound route for it is PIN-protected and requires authentication, the other ring group members will no longer receive the call after it is forwarded. If the forwarded call hits voicemail, the other ring group members will no longer receive the call. 			

Replace Display Name	If enabled, the UCM will replace the caller display name with the Ring Group name the caller know whether the call is incoming from a direct extension or a Ring Group.				
Enable Destination	If enabled, users could select extension, voicemail, ring group, IVR, call queue, voicemail group as the destination if the call to the ring group has no answer. Secret and Email address are required if voicemail is selected as the destination.

Remote Extension in Ring Group

Remote extensions from the peer trunk of a remote UCM6100 can be included in the ring group with local extension. An example of Ring Group with peer extensions is presented in the following:

- 1. Creating SIP Peer Trunk between both UCM6100_A and UCM6100_B. **SIP Trunk** can be found under Web GUI→**Extension/Trunk**→**VoIP Trunks.** Also, please configure their Inbound/Outbound routes accordingly.
- Click edit button in the menu A and check if Sync LDAP Enable is selected, this option will allow UCM6100_A update remote LDAP server automatically from peer UCM6100_B. In addition, Sync LDAP Password must match for UCM6100_A and UCM6100_B to sync LDAP contact automatically. Port number can be anything between 0~65535, and use the outbound rule created in step 1 for the LDAP Outbound Rule option.

SIP Trunk: BranchOffice

PAGING AND INTERCOM GROUP

Paging and Intercom Group can be used to make an announcement over the speaker on a group of phones. Targeted phones will answer immediately using speaker. The UCM6100 paging and intercom can be used via feature code to a single extension or a paging/intercom group. This section describes the configuration of paging/intercom group under Web GUI**→Call Features**→**Paging/Intercom**.

Configure Paging/Intercom Group

• Click on "Create New Paging/Intercom Group" to add paging/intercom group.

Figure 154: Creating a scheduled paging/intercom call

CALL QUEUE

The UCM6100 supports call queue by using static agents or dynamic agents. Call Queue system can accept more calls than the available agents. Incoming calls will be held until next representative is available in the system. This section describes the configuration of call queue under Web GUI \rightarrow Call Features \rightarrow Call Queue.

Configure Call Queue

Call queue settings can be accessed via Web GUI→Call Features→Call Queue.

all Queue	Queue Reco	ordings						
+ Add	Call Queue Statist	ics 🥥 Switchb	oard 🛛 🞯 Dynamic Agent Logi	n Settings				
Extension 🗘	Name 🕏	Strategy 🗘	Queue Chairman 🗘		Mer	nbers		Options
6500	RingAll	Ring All		1000	1001	1002	1005	C 🗖

Figure 155: Call Queue

UCM6100 supports custom prompt feature in call queue. This custom prompt will active after the caller waits for a period of time in the Queue. Then caller could choose to leave a message/ transfer to default extension or keep waiting in the queue.

To configure this feature, please go to UCM Web GUI \rightarrow Call Features \rightarrow Call Queue \rightarrow Create New Queue/Edit Queue \rightarrow Queue Options \rightarrow set Enable Destination to Enter Destination with Voice Prompt. Users could configure the wait time with Voice Prompt Cycle.

- Click on "Create New Queue" to add call queue.
- Click on 🖾 to edit the call queue. The call queue configuration parameters are listed in the table below.
- Click on to delete the call queue.

 Table 75: Call Queue Configuration Parameters

Basic Settings			
Extension	Configure the call queue extension number.		
Name	Configure the call queue name to identify the call queue.		
	Select the strategy for the call queue.		
Strategy	Ring All Ring all available Agents simultaneously until one answers.		

	 Linear Ring agents in the specified order. Least Recent Ring the agent who has been called the least recently. Fewest Calls Ring the agent with the fewest completed calls. Random Ring a random agent. Round Robin Ring the agents in Round Robin scheduling with memory. The default setting is "Ring All".
Music On Hold	Select the Music On Hold class for the call queue. Note: Music On Hold classes can be managed from Web GUI→PBX Settings→Music On Hold.
Max Queue Length	Configure the maximum number of calls to be queued at once. This number does not include calls that have been connected with agents. It only includes calls not connected yet. The default setting is 0, which means unlimited. When the maximum value is reached, the caller will be treated with busy tone followed by the next calling rule after attempting to enter the queue.
Wrapup Time	Configure the number of seconds before a new call can ring the queue after the last call on the agent is completed. If set to 0, there will be no delay between calls to the queue. The default setting is 10 seconds.
Retry Time	Configure the number of seconds to wait before ringing the next agent.
Ring Time	Configure the number of seconds an agent will ring before the call goes to the next agent. The default setting is 30 seconds.
Auto Record	If enabled, the calls on the call queue will be automatically recorded. The recording files can be accessed in Queue Recordings under Web GUI→Call Features→Call Queue.
Max Wait Time	Configure the timeout after which users will be disconnected from the call queue. The default setting is "60". 0 means unlimited. Note: It is recommended to configure "Wait Time" longer than the "Wrapup Time".
Destination	Once Max Wait Time has been configured, select to which destination send the calls that have timed out. The default is to "Hang up" the call.
Destination Prompt Cycle	Configure the voice prompt cycle (in seconds) of the call queue. Once all agents are busy and the voice prompt will be played and you can press the appropriate key to transfer to failover destination.
Custom Prompt	When playing a custom prompt, press 1 to transfer to failover destination.

Destination	Select failover destination to send callers after pressing 1 upon hearing the custom prompt.		
Advanced Settings			
 Virtual Queue Position Announcement Queue Chairman 	Refer to Call Center Settings and enhancements section for detailed information about these features.		
Enable Agent Login	Enables agent login/logout feature for static agents (supported only on GXP21XX phones with fw higher than 1.0.9.18).		
Leave When Empty	 Configure whether the callers will be disconnected from the queue or not if the queue has no agent anymore. The default setting is "Strict". Yes Callers will be disconnected from the queue if all agents are paused or invalid. No 		
	 Never disconnect the callers from the queue when the queue is empty. Strict Callers will be disconnected from the queue if all agents are paused, invalid or unavailable. 		
Dial in Empty Queue	 Configure whether the callers can dial into a call queue if the queue has no agent. The default setting is "No". Yes Callers can always dial into a call queue. No Callers cannot dial into a queue if all agents are paused or invalid. Strict Callers cannot dial into a queue if the agents are paused, invalid or unavailable. 		
Failover Destination	Choose the destination where the call will be directed when the queue is empty or when all the agents are not logged in, here are the destinations that can be configured: Play Sound. Extension. Kites Sound. Voicemail. Queues. Ring Group. Voicemail Group. IVR. External Number.		

Report Hold Time	If enabled, the UCM6100 will report (to the agent) the duration of time of the call before the caller is connected to the agent. The default setting is "No".
Replace Display Name	If enabled, the UCM will replace the caller display name with the Call Queue name so that the caller knows the call is incoming from a Call Queue.
Enable Feature Codes	Enable feature codes option for call queue. For example, *83 is used for "Agent Pause"
Dynamic Login Password	If enabled, the configured PIN number is required for dynamic agent to log in. The default setting is disabled.
Alert-Info	Configure the call destination for the call to be routed to if no agent in this call queue answers the call.
Agents	
Agents	Go to "Agents" Tab and Select the available users to be the static agents in the call queue. Choose from the available users on the left to the static agents list on the right. Click on the call of the choose. And use UP and Down arrow to select the order of the agent within the call queue.

Static Agents limitation:

To guarantee a high level of audio quality with the call queue feature, UCMs will limit the number of static agents allowed to be assigned depending on the UCM model used. If the user attempts to configure the number of static agents to be more than the maximum allowed number, a warning message will appear.

	*	Edit Queue: 650	0					
۱ System Status	~	Basic Settings	Advanced Settings	Agents				
Extension / Trunk	*							
Call Features	^	Static Age	ents: 0 item	Ava	ilable		20 items	Selected
Conference			Search		Q >	Sea	rch	Q
IVR				None	1		3001 "Driss Aala" 3002	
Voicemail							3003	
Ring Groups					4		3004	•
Paging/Intercom								
Call Queue								

Figure 156: Static Agents limitation

The following table lists the maximum number of static agents for each UCM model:

UCM Model	Max Static Agents in Call Queue
UCM6102	22
UCM6202	23
UCM6104	33
UCM6204	34
UCM6108 and UCM6116	45
UCM6208	75
UCM6510	150

Table 76: Static Agent Limitation

Click on "Dynamic Agent Login Settings" to configure Agent Login Extension Postfix and Agent Logout Extension Postfix. Once configured, users could log in the call queue as dynamic agent.

Dynamic Agent Log	gin Settings
Agent Login Exter	nsion P *
Agent Logout Exte	ension **
Example :	If Queue Extension is 6500,
	Agent Login Extension Postfix is *,
	Agent Logout Extension Postfix is **,
	Dial 6500* to log in, dial 6500** to log out.
	Note: Remove postfix will lead the agent that has
	not log out yet cannot logout.

Figure 157: Agent Login Settings

For example, if the call queue extension is 6500, Agent Login Extension Postfix is * and Agent Logout Extension Postfix is **, users could dial 6500* to login to the call queue as dynamic agent and dial 6500** to logout from the call queue. Dynamic agent doesn't need to be listed as static agent and can log in/log out at any time.

• Call queue feature code "Agent Pause" and "Agent Unpause" can be configured under Web GUI→Call Features→Feature Codes. The default feature code is *83 for "Agent Pause" and *84 for "Agent Unpause".

Queue recordings are shown on the Call Queue page under "Queue Recordings" Tab. Click on download the recording file in .wav format; click on to delete the recording file. To delete multiple recording files by one click, select several recording files to be deleted and click on "Delete Selected Recording Files" or click on "Delete All Recording Files" to delete all recording files.

Call Center Settings and enhancements

UCM supports light weight call center features including virtual queue and position announcement, allowing the callers to know their position on the call queue and giving them the option to either stay on the line waiting for their turn or activate a callback which will be initiated by the UCM one an agent is free.

To configure call center features, press \square on an existing call queue and go under the advanced settings tab. Following parameters are available:

Enable Virtual Queue	Enable virtual queue to activate call center features.
Virtual Queue Period	Configure the time in (s) after which the virtual queue will take effect and the menu will be presented to the caller to choose an option. Default is 20s.
Virtual Queue Mode	 Offered to caller after timeout: After the virtual queue period passes, the caller will enter the virtual call queue and be presented with a menu to choose an option, the choices are summarized below: Press * to set current number as callback number. Press 0 to set a callback number different than current caller number. Press # to keep waiting on the call queue. Triggered on user request: In this mode, the callers can activate the virtual queue by pressing 2, then they will be presented with the menu to choose an option as below: Press * to set current number as callback number. Press * to set current number as callback number. Press * to set current number as callback number. Press * to set current number as callback number. Press * to set current number as callback number. Press * to set current number as callback number. Press * to set current number as callback number.
Virtual Queue Outbound Prefix	System will add this prefix to dialed numbers when calling back users.
Enable Virtual Queue Timeout	When this option is enabled and after a caller registers a call back request on the virtual queue. While all the agents are busy, the UCM will call an agent once he/she is idle again, this timeout is used for how long the UCM continues calling the agent and if the agent doesn't answer the call then the callback request will timeout and expire.
Write Timeout	Configure the virtual queue callback timeout period in seconds.
Enable Position Announcement	Enable the announcement of the caller's position periodically.

Table 77: Call Center Parameters

Position Announcement Interval	Configure the period of time in (s) during which the UCM will announce the caller's position in the call queue.
CTI Chairman	Select the extension to act as chairman of the queue (monitoring).
Enable Agent Login	 When enabled, statics agents can conveniently log in and out of a queue by configuring a programmable key on their phones as a shortcut. Notes: ✓ This feature is currently available only for GXP21xx phones on firmware 1.0.9.18 or greater. ✓ After enabling the feature, users need to set the option on GXP21XX phone under "Account->SIP Settings->Advanced Features->Special Feature" to "UCM Call Center". A softkey labeled "UCM-CC" will appear on the bottom of the phone's screen. ✓ When this option is enabled, dynamic agent login will be no longer supported. ✓ In case of concurrent registrations, changing agent status on one phone (login/logout) will be reflected on all phones.
Autofill	Enable or Disable the autofill feature.

Queue Auto fill enhancement:

In previous UCM firmware, the call queue has a serial type behavior in that the queue will make all waiting callers wait in the queue even if there is more than one available member ready to take calls until the head caller is connected with the member they were trying to get to.

The next waiting caller in line then becomes the head caller, and they are then connected with the next available member and all available members and waiting callers waits while this happens.

Starting from 1.0.14.x, the waiting callers are connecting with available members in a parallel fashion until there are no more available members or no more waiting callers.

For example, in a call queue with linear method, if there are two available agents, when two callers call in the queue at the same time, UCM will assign the two callers to each of the two available agents at the same time, rather than assigning the second caller to second available agent after the first agent answers the call from the first caller.

Queue Statistics

Along with call center features, users can also gather detailed call queue statistics allowing them to make better changes/decision to manage better the call distribution and handling based on time, agent and queue. To access call queue statistics, go to Web GUI \rightarrow Call Features \rightarrow Call Queue and click on "Call Queue Statistics", the following page will be displayed:

Call Queue Statistics					Save Cancel

Figure 158: Call Queue Statistics

Select the time interval along with the queue(s) and agent(s) to get detailed statistics.

User can download statistics on CSV format by clicking on the download button download, also the statistics can be cleared using "Clear Statistics" button Clear Statistics.

The statistics can be automatically sent to a specific email address on a preconfigured Period, this can be done

by clicking on "Automatic Download Settings" button ^(a) Automatic Download Settings, and user will be directed to below page where he can configure the download period (Day/Week/Month) and the Email where the statistics will be sent (Email settings should be configured correctly):

Automatic Download Settings	Save Cancel

Switchboard

Switchboard is a Web GUI tool for call queue monitoring and management, admin can access to it from the menu **Call Features**→**Call Queue** then press « Switchboard ».

Following page will be displayed:

Figure 160 : Switchboard summary

Page above summarizes the available queues statistics and if one of the queues is clicked the user will be directed to page below:

Switchboa	rd									Back
5500 (Sales)	650	01 (test)								
/aiting						Proceeding				
Status	Caller	Callee	Position \$	Talk Time	Options	Status	Caller	Callee	Talk Time	Options

le	lle	20	03	1	7				00:00:00	Static

Figure 161: Call Queue Switchboard

The table below gives a brief description for the main menus:

Waiting	This menu shows the current waiting calls along with the caller id and the option to hang-up call by pressing on the <u>button</u> .
Proceeding	Shows the current established calls along with the caller id and the callee (agent) as well as the option to hang-up, transfer, add conference or barge-in the call using the call options buttons.
Agents	Displays the list of agents in the queue and the extension status (idle, ringing, in use or unavailable) along with some basic call statistics and agent's mode (static or dynamic).

There are three different privilege levels for Call Queue management from the switchboard: Super Admin, Queue Chairman, and Queue Agent.

• **Super Admin** - Default admin of the UCM. Call queue privileges include being able to view and edit all queue agents, monitor and execute actions for incoming and ongoing calls for each extension in Switchboard, and generate Call Queue reports to track performance.

- Queue Chairman User appointed by Super Admin to monitor and manage an assigned queue extension via Switchboard. The Queue Chairman can log into the UCM user portal with his extension number and assigned user password. To access the Switchboard, click on "*Value-added Features*" in the side menu and click on "*Call Queue*". In the image below, User 1012 is the Queue Chairman appointed to manage Queue Extension 6500 and can see all the agents of the queue in the Switchboard.
- Queue Agent User appointed by Super Admin to be a member of a queue extension. A queue agent can log into the UCM user portal with his extension number and assigned user password. To access the Switchboard, click on "*Value-added Features*" in the side menu and click on "*Call Queue*". However, a queue agent can view and manage only his own calls and statistics, but not other agents' in the queue extension. In the image below, User 1007 is a queue agent and can see only his own information in the Switchboard.

PICKUP GROUPS

The UCM6100 supports pickup group feature which allows users to pick up incoming calls for other extensions if they are in the same pickup group, by dialing "Pickup Extension" feature code (by default *8).

Configure Pickup Groups

Pickup groups can be configured via Web GUI→**Call Features**→**Pickup Groups**.

- Click on + Add to create a new pickup group.
- Click on 🖾 to edit the pickup group.
- Click on ^{III} to delete the pickup group.

Select extensions from the list on the left side to the right side.

Pickup Groups

Figure 162: Edit Pickup Group

Configure Pickup Feature Code

When picking up the call for the pickup group member, the user only needs to dial the pickup feature code. It's not necessary to add the extension number after the pickup feature code. The pickup feature code is configurable under Web GUI **Call Features Feature Codes**.

The default feature code for call pickup extension is *8, otherwise if the person intending to pick up the call knows the ringing extension they can use ** followed by the extension number in order to perform the call pickup operation.

Figure 164: Music on Hold Default Class

- Click on "Add Create New MOH Class" to add a new Music on Hold class.
- Click on ^{III} to configure the MOH class sort method to be "Alpha" or "Random" for the sound files.
- Click on 🔲 next to the selected Music on Hold class you want to delete from your Music on Hold classes.
- Click on ^{Dupload} to start uploading. Users can upload:
 - Single files with 8KHz Mono Music file, or
 - Music on hold files in a compressed package with .tar, .tar.gz and .tgz as the suffix. The file name can only be letters, digits or special characters -_
 - the size for the uploaded file should be less than 30M, the compressed file will be applied to the entire MoH.
- Users could also download all the music on hold files from UCM. In the Music On Hold page, click on

🛃 Download All Music On Hold

and the file will be downloaded to your local PC.

- Click on onext to the sound file to disable it from the selected Music On Hold Class.
- Click on OFF next to the sound file to enable it from the selected Music On Hold Class.
- Select the sound files and click on Trees Selected Sound Files to delete all selected music on hold files.

Note: the size for the uploaded file should be less than 30M, the compressed file will be applied to the entire MoH.

The UCM6100 allows Users to select the Music on Hold file from WebGUI to play it. The UCM6100 will initiate a call to the selected extension and play this Music on Hold file once the call is answered.

Steps to play the music on hold file:

- 1. Click on the 🕑 button for the Music on Hold file.
- 2. In the prompted window, select the extension to playback and click

Play Custom Pro	ompt: macroform-cold_day.wav	×
File to Play :	macroform- cold_day.wav	
Extension for PlayBa	1001 ×	
	Cancel	

Figure 165: Play Custom Prompt

- 3. The selected extension will ring.
- 4. Answer the call to listen to the music playback.

Users could also record their own Music on hold to override an existing custom prompt, this can be done by following those steps:

- 1. Click on 🕮.
- 2. A prompt of confirmation will pop up, as shown below.

	Are you sur prompt?	re you want to record to override an existing custom
		Cancel OK
		Figure 166: Information Prompt
3.	Click OK	
4.	In the prompted window, select	t the extension to playback and click Record.

Edit Custom Pro	npt: macroform-cold_day.wav	×
File to Play :	macroform-	
Extension for Recordi.	cold_day.wav	
	Cancel Record	

Figure 167: Record Custom Prompt

- 5. Answer the call and start to record your new music on hold.
- 6. Hangup the call and refresh Music On Hold page then you can listen to the new recorded file.

▲ Note:

Once the MOH file is deleted, there are two ways to recover the music files.

- Users could download the MOH file from this link: <u>http://downloads.asterisk.org/pub/telephony/sounds/releases/asterisk-moh-opsound-wav-2.03.tar.gz</u> After downloading and unzip the pack, users could then upload the music files to UCM.
- Factory reset could also recover the MOH file on the UCM.

FAX SERVER

The UCM6100 supports T.30/T.38 Fax and Fax Pass-through. It can convert the received Fax to PDF format and send it to the configured Email address. Fax/T.38 settings can be accessed via Web GUI \rightarrow Call Features \rightarrow FAX/T.38. The list of received Fax files will be displayed in the same web page for users to view, retrieve and delete.

Configure Fax/T.38

- Click on "Create New Fax Extension". In the popped-up window, fill the extension, name and Email address to send the received Fax to.
- Click on "Fax Settings" to configure the Fax parameters.
- Click on 🖾 to edit the Fax extension.
- Click on to delete the Fax extension.

Additionally, if a fax still fails to send, a <i>Resend</i> button will appear in the File Send Progress list in <i>Value-Added</i>				

Receiving Fax

Sample Configuration to Receive Fax from PSTN Line

The following instructions describe how to use the UCM6100 to receive Fax from PSTN line on the Fax machine connected to the UCM6100 FXS port.

- 1. Connect Fax machine to the UCM6100 FXS port.
- 2. Connect PSTN line to the UCM6100 FXO port.
- 3. Go to Web GUI→Extension/Trunk page.
- 4. Create or edit the analog trunk for Fax as below.

Fax Mode: Make sure "Fax Mode" option is set to "None".

Edit Analog Trunk: Telco1				Save
FXO Port: 🗹 1 🗌 2				
* Trunk Name : Telco 1]	SLA Mode:

Use CallerID : 🔽		Fax Mode:	None v	
Caller ID Scheme : Bellcore/Telc Y]	* FXO Dial Delay (0	

Figure 169: Configure Analog Trunk without Fax Detection

- 5. Go to UCM6100 Web GUI→Extension/Trunk→Extensions page.
- 6. Create or edit the extension for FXS port.
 - Analog Station: Select FXS port to be assigned to the extension. By default, it's set to "None".
 - Once selected, analog related settings for this extension will show up in "Analog Settings" section.

Create New Ext	ension							Save

Dial Trunk :		Privilege Level :	Internal	~
DID Destination :		Allowed to seamless tran		
Default Mode				
* Default Destination :	Extension ~	1005 "Fax Extension"	~	

Figure 172: Configure Inbound Rule for Fax

Now the Fax configuration is done. When there is an incoming Fax calling to the PSTN number for the FXO port, it will send the Fax to the Fax machine.

Sample Configuration for Fax-To-Email

The following instructions describe a sample configuration on how to use Fax-to-Email feature on the UCM6100.

- 1. Connect PSTN line to the UCM6100 FXO port.
- 2. Go to UCM6100 Web GUI→Call Features→Fax/T.38 page. Create a new Fax extension.

Create New Fax Exte	ension
* Extension :	7200
* Name :	Fax
* Email Address :	fax@domain.local

Figure 173: Create Fax Extension

- 3. Go to UCM6100 Web GUI→Extension/Trunk→Analog Trunks page. Create a new analog trunk. Please make sure "Fax Detection" is set to "No".
- 4. Go to UCM6100 Web GUI→Extension/Trunk→Inbound Routes page. Create a new inbound route and set the default destination to the Fax extension.

Create New Inbound Rule						
* Trunks:	AnalogTrunks Fax_Line V	* Pattern :				
CallerID Pattern :	Separate patterns by commas, such	Disable This	; Route :			
Prepend Trunk Name :		Prepend Use	er Defined N

FAX Sending

Besides the support of Fax machines, The UCM6100 supports also sending Fax via Web GUI access. This feature can be found on Web GUI→Value-added Features→Fax Sending page. To send fax, pre-setup for analog trunk and outbound route is required. Please refer to [ANALOG TRUNKS], [VOIP TRUNKS] and [Outbound Routes] sections for configuring analog trunk and outbound route.

After making sure analog trunk or VoIP Trunk is setup properly and UCM6100 can reach out to PSTN numbers via the trunk, on Fax Sending page, enter the fax number and upload the file to be faxed. Then click on "Send" to start. The progress of sending fax will be displayed in Web GUI. Users can also view the sending history is in the same web page.

Figure 177: Fax Send Progress

BUSY CAMP-ON

The UCM6100 supports busy camp-on/call completion feature that allows the PBX to camp on a called party and inform the caller as soon as the called party becomes available given the previous attempted call has failed.

The configuration and instructions on how to use busy camp-on/call completion feature can be found in the following guide:

http://www.grandstream.com/sites/default/files/Resources/ucm6xxx busy camp on guide.pdf

PRESENCE

UCM does support SIP presence feature which allows users to advertise their current availability status and willingness to receive calls, this way other users can use their phones in order to monitor the presence status of each user and decide whether to call them or not based on their advertised availability.

This feature is different than BLF which is mainly used to monitor the dialog status for each extension (Ringing, Idle or Busy). Instead the SIP presence module gives more options for users to choose which state they want to put themselves in.

In order to configure the presence status of an extension from the web GUI, users can access the menu of configuration using one of the two following methods:

• From admin account, go under the menu **Extension/Trunk→Extensions** and choose the desired extension to edit then navigate to the "Features" tab.

OR

• From the User Portal, go under the menu Basic **Information**→**Extensions** and navigate to the Features tab to have the following options.

Edit Extension:	10 <mark>0</mark> 0					Save
Basic Settings	Media	Features	Specific Time	Follow Me		
Call Trans	6 m					
Call Iran	ster					
	Presence Status:	Available	~			
	Available Away	Chat	Custom Presence Status	Unavailable		
	Call Forward	None	×	CFU Time Condition:	All Time	×
	Unconditional:					
	Call Forward No	None	~	CFN Time Condition:	All Time	~
	Answer:					
	Call Forward Busy	None	~	CFB Time Condition:	All Time	~
	Do Not Disturb:			* DND Time Condition:	All Time	v
	FWD Whitelist:			\oplus		

Figure 178: SIP Presence Configuration

Select which status to set from the presence status selection drop list, six options are available and below is a brief description of these states:

	Table 80: SIP Presence Status
Available	The contact is online and can participate in conversations/phone calls.
Away	The contact is currently away (ex: for lunch break).
Chat	The contact has limited conversation flexibility and can only be reached via chat.
Do Not Disturb	The Contact is on DND (Do Not Disturb) mode.
Custom Presence Status	Please enter the presence status for this mode on the Web GUI.
Unavailable	The contact is unreachable for the moment, please try to contact later.

Another option to set the presence status and which is more practical is using the feature code from the user's phone, one the user dials the feature code (default is *48), a prompt will be played to select which status they want to put themselves in, by pressing the corresponding key.

The feature code can be enabled and customized from the Web GUI→Call Features→Feature Codes.

* Voicemail Access Code:	*98	* My Voicemail :	*97	~

Figure 179: SIP Presence Feature Code

When a user does change his/her SIP presence status by making a call using presence feature code, the UCM will create a corresponding CDR entry showing the call as **Action type = PRSENCE_STATUS.**

By default, this page displays the CDR entries from the current month. Use the "Filter" button to specify a time range.

FOLLOW ME

Follow Me is a feature on the UCM6100 that allows users to direct calls to other phone numbers and have them ring all at once or one after the other. Calls can be directed to users' home phone, office phone, mobile and etc. The calls will get to the user no matter where they are. Follow Me option can be found under extension settings page Web $GUI \rightarrow Extension/Trunk \rightarrow Extensions$.

To configure follow me:

- 1. Choose the extension and click on \square .
- 2. Go to the Follow me tab to add destination numbers and enable the feature.

Edit Extension: 10	000				Save
Basic Settings	Media	Features	Specific Time	Follow Me

1003 for 3	0 (seconds)				8

Figure 181: Edit Follow Me

- 3. Click on + Add to add local extensions or external numbers to be called after ringing the extension selected in the first step.
- 4. Once created, it will be displayed on the follow me list. And you can click on ⁽²⁾ to delete the Follow Me.

The following table shows the Follow Me configuration parameters:

Table 81: Follow Me Settings				
Enable	Configure to enable or disable Follow Me for this user.			
Skip Trunk Auth	If external number is added in the Follow Me, please make sure this option is enabled or the "Skip Trunk Auth" option of the extension is enabled, otherwise the external Follow Me number cannot be reached.			
Music On Hold Class	Configure the Music On Hold class that the caller would hear while tracking users			
Confirm When Answering	By default, it is enabled and user will be asked to press 1 to accept the call or to press 2 to reject the call after answering a Follow Me call. If it is disabled, the Follow Me call will be established once after the user answers.			
Enable Destination	When enabled, the call will be routed to the default destination if no one in the Follow Me extensions answers the call.			
Default Destination	 Configure the destination if no one in the Follow Me extensions answers the call. The available options are: Extension Voicemail Queues Ring Group Voicemail Group IVR External Number 			
Follow Me Numbers	The added numbers are listed here. Click on \land to arrange the order. Click on \bigotimes to delete the number. Click on $+ \operatorname{Add}$ to add new numbers.			
New Follow Me Number	Add a new Follow Me number which could be a 'Local Extension' or 'External Number'. The selected dial plan should have permissions to dial the defined external number.			
Dialing Order	Select the order in which the Follow Me destinations will be dialed to reach the user: ring all at once or ring one after the other.			

Table 81: Follow Me Settings

Click on "Follow Me Options" under Web GUI→**Extension/Trunk→Extension** page to enable or disable the options listed in the following table.

Table 82: Follow Me Options

Playback Incoming	If enabled, the PBX will playback the incoming status message before starting
Status Message	the Follow Me steps.
Record the Caller's	If enabled, the PBX will record the caller's name from the phone so it can be
Name	announced to the callee in each step.
Playback Unreachable	If enabled, the PBX will playback the unreachable status message to the caller
Status Message	if the callee cannot be reached.

SPEED DIAL

The UCM6100 supports Speed Dial feature that allows users to call a certain destination by pressing one or four digits on the keypad. This creates a system-wide speed dial access for all the extensions on the UCM6100.

To enable Speed Dial, on the UCM6100 Web GUI, go to page Web GUI→Call Features→Speed Dial.

User should first click on + Add. Then decide from one digit up to four digits combination used for Speed

Dial and select a dial destination from "Default Destination". The supported destinations include extension, voicemail, conference room, voicemail group, IVR, ring group, call queue, page group, fax, DISA, Dial by Name and external number.

Figure 183: List of Speed Dial

DISA

In many situations, the user will find the need to access his own IP PBX resources but he is not physically near one of his extensions. However, he does have access to his own cell phone. In this case, we can use what is commonly known as DISA (Direct Inward System Access). Under this scenario, the user will be able to call from the outside, whether it's using his cell phone, pay phone, regular PSTN, etc. After calling into UCM6100, the user can then dial out via the SIP trunk or PSTN trunk connected to UCM6100 as it is an internal extension.

The UCM6100 supports DISA to be used in IVR or inbound route. Before using it, create new DISA under Web GUI**→Call Features→DISA**.

- Click on + Add to add a new DISA.
- Click on \square to edit the DISA configuration.
- Click on to delete the DISA.

Create New DISA	
* Name :	Name
* Password:	
Permission :	Internal v
* Response Timeout	10
* Digit Timeout:	5
Allow Hang-up :	
Replace Display Nam	

Figure 184: Create New DISA

The following table details the parameters to set and configure DISA feature on UCM6100 PBX.

	Table 03. DISA Settings	
Name	Configure DISA name to identify the DISA.	
Password	Configure the password (digit only) required for the user to enter before using DISA to dial out. Note: The password must be at least 4 digits.	
Permission	Configure the permission level for DISA. The available permissions are "Internal", "Local", "National" and "International" from the lowest level to the highest level. The default setting is "Internal". If the user tries to dial outbound calls after dialing into the DISA, the UCM6100 will compared the DISA's permission level with the outbound route's privilege level. If the DISA's permission level is higher than (or equal to) the outbound route's privilege level, the call will be allowed to go through.	
Response Timeout	Configure the maximum amount of time the UCM6100 will wait before hanging up if the user dials an incomplete or invalid number. The default setting is 10 seconds.	
Digit Timeout	Configure the maximum amount of time permitted between digits when the user is typing the extension. The default setting is 5 seconds.	
Allow Hangup	If enabled, during an active call, users can enter the UCM6100 Hangup feature code (by default it's *0) to disconnect the call or hang up directly. A new dial tone will be heard shortly for the user to make a new call. The default setting is "No".	
Replace Display Name	If enabled, the UCM will replace the caller display name with the DISA name.	

Table 83: DISA Settings

Once successfully created, users can configure the inbound route destination as "DISA" or IVR key event as "DISA". When dialing into DISA, users will be prompted with password first. After entering the correct password, a second dial tone will be heard for the users to dial out.

EMERGENCY

UCM supports configuration and management of numbers to be called in emergency situation, thus bypassing the regular outbound call routing process and allowing users in critical situation to dial out for emergency help with the possibility to have redundant trunks as point of exit in case one of the lines is down.

Also, the module supports notification for other internal users, thus when someone dials an emergency call (ex: 911) a notification call will be sent to other staff to know about the current situation.

Email alerts are also supported after enabling the notification for the event under "Maintenance → System Events"

To configure emergency numbers, users need to follow below steps:

- 1. Navigate on the web GUI under "Call Features → Emergency Calls"
- 2. Click on + Add to add a new emergency number.
- 3. Configure the required fields "Name, Emergency Number and Trunk(s) to be used to reach the number".
- 4. Save and apply the configuration.

Create New Emergend	cy Call		5	Save Cancel

Figure 185: Emergency Number Configuration

The table below gives more description of the configuration Parameters when creating emergency numbers.

	Table 84: Emergency Numbers Parameters
Name	Configure the name of the emergency call. For example, "emergency911","emergency211" and etc.
Emergency Number	Config the emergency service number. For example, "911", "211" and etc.
Emergency Level	Select the emergency level of the number. Level "3" means the most urgent.
Disable Hunt on Busy	If this option is not enabled, when the lines of trunks which the coming emergency call routes by are completely occupied, the line-grabbing function will automatically cut off a line from all busy lines so that the coming emergency call can seize it for dialing out. This option is not enabled by default.
Custom Prompt	This option sets a custom prompt to be used as an announcement to the person receiving an emergency call. The file can be uploaded from the page "Custom Prompt". Click "Prompt" to add additional record.
Use Trunks	Select the trunks for the emergency call. Select one trunk at least, and select five trunks at most.
Members Notified	Select the members who will be notified when an emergency call occurs.

CALLBACK

Callback is mainly designed for users who often use their mobile phones to make long distance or international calls which may have high service charges. The callback feature provides an economic solution for reduce the cost from this.

The callback feature works as follows:

- 1. Configure a new callback on the UCM6100.
- 2. On the UCM6100, configure destination of the inbound route for analog trunk to callback.
- 3. Save and apply the settings.
- 4. The user calls the PSTN number of the UCM6100 using the mobile phone, which goes to callback destination as specified in the inbound route.
- 5. Once the user hears the ringback tone from the mobile phone, hang up the call on the mobile phone.
- 6. The UCM6100 will call back the user.
- 7. The user answers the call.
- 8. The call will be sent to DISA or IVR which directs the user to dial the destination number.
- 9. The user will be connected to the destination number.

In this way, the calls are placed and connected through trunks on the UCM6100 instead of to the mobile phone directly. Therefore, the user will not be charged on mobile phone services for long distance or international calls.

To configure callback on the UCM6100, go to Web GUI→Call Features→Callback page and click on

+	Create	New	Call	lback
	cicate		Can	IDDECK

Configuration parameters are listed in the following table.

	-
Name	Configure a name to identify the Callback. (Enter at least two characters)
CallerID Pattern	Configure the pattern of the callers allowed to use this callback. The caller who places the inbound call needs to have the CallerID match this pattern so that the caller can get callback after hanging up the call. Note: If leaving as blank, all numbers are allowed to use this callback.
Outbound Prepend	Configure the prepend digits to be added at before dialing the outside number. The number with prepended digits will be used to match the outbound route. '-' is the connection character which will be ignored.
Delay Before Callback	Configure the number of seconds to be delayed before calling back the user.
Destination	 Configure the destination which the callback will direct the caller to. Two destinations are available: IVR DISA The caller can then enter the desired number to dial out via UCM6100 trunk.

Table 85: Callback Configuration Parameters

BLF AND EVENT LIST

BLF

The UCM6100 supports BLF monitoring for extensions, ring group, call queue, conference room and parking lot. For example, on the user's phone, configure the parking lot number 701 as the BLF monitored number. When there is a parked call on 701, the LED for this BLF key will light up in red, meaning a call is parked against this parking lot. Pressing this BLF key can pick up the call from this parking lot.

⚠ Note:

On the Grandstream GXP series phones, the MPK supports "Call Park" mode, which can be used to park the call by configuring the MPK number as call park feature code (e.g., 700). MPK "Call Park" mode can also be used to monitor and pickup parked call if the MPK number is configured as parking lot (e.g., 701).

Event List

Besides BLF, users can also configure the phones to monitor event list. In this way, both local extensions on the same UCM6100 and remote extensions on the VOIP trunk can be monitored. The event list setting is under Web $GUI \rightarrow Call Features \rightarrow Event List$.

- Click on "Create New Event List" to add a new event list.
- Sort selected extensions manually in the Eventlist
- Click on ^{III} to edit the event list configuration.
- Click on Ut to delete the event list.

Table 86: Event List Settings

URI	Configure the name of this event list (for example, office_event_list). Please note the URI name cannot be the same as the extension name on the UCM6100. The valid characters are letters, digits, _ and
Local Extensions	Select the available extensions/Extension Groups listed on the local UCM6100 to be monitored in the event list.
Remote Extensions	If LDAP sync is enabled between the UCM6100 and the peer UCM6100, the remote extensions will be listed under "Available Extensions". If not, manually enter the remote extensions under "Special Extensions" field.
Special Extensions	Manually enter the remote extensions in the peer/register trunk to be monitored in the event list. Valid format: 5000,5001,9000

Figure 187: Create New Event List

Remote extension monitoring works on the UCM6100 via event list BLF, among Peer SIP trunks or Register SIP trunks (register to each other). Therefore, please properly configure SIP trunks on the UCM6100 first before using remote BLF feature. Please note the SIP end points need support event list BLF in order to monitor remote extensions.

When an event list is created on the UCM6100 and remote extensions are added to the list, the UCM6100 will send out SIP SUBSCRIBE to the remote UCM6100 to obtain the remote extension status. When the SIP end points register and subscribe to the local UCM6100 event list, it can obtain the remote extension status from this event list. Once successfully configured, the event list page will show the status of total extension and subscribers for each event list. Users can also select the event URI to check the monitored extension's status and the subscribers' details.

▲ Note:

- To configure LDAP sync, please go to UCM6100 Web GUI→Extension/Trunk→VoIP Trunk. You will see "Sync LDAP Enable" option. Once enabled, please configure password information for the remote peer UCM6100 to connect to the local UCM6100. Additional information such as port number, LDAP outbound rule, LDAP Dialed Prefix will also be required. Both the local UCM6100 and remote UCM6100 need enable LDAP sync option with the same password for successful connection and synchronization.
- Currently LDAP sync feature only works between two UCM6100s.
- (Theoretically) Remote BLF monitoring will work when the remote PBX being monitored is non-UCM6100 PBX. However, it might not work the other way around depending on whether the non-UCM6100 PBX supports event list BLF or remote monitoring feature.

DIAL BY NAME

Dial by Name is a feature on the PBX that allows caller to search a person by first or last name via his/her phone's keypad. The administrator can define the Dial by Name directory including the desired extensions in the directory and the searching type by "first name" or "last name". After dialing in, the PBX IVR/Auto Attendant will guide the caller to spell the digits to find the person in the Dial by Name directory. This feature allows customers/clients to use the guided automatic system to get in touch with the enterprise employees without having to know the extension number, which brings convenience and improves business image for the enterprise.

Dial by Name Configuration

The administrators can create the dial by name group under Web GUI→Call Features→Dial By Name.

* Name :	Name		
* Extension:	7101		
Members:	12 Available Extensions	0	Selected Exten
	Search Q	Search	
	1000 "John DOE"	<	
	1001	>	None
	1002	in and	
	☐ 1003		
LDAP Phonebook:	3 Available LDAP	0	Selected I
	Search Q	Search	
	ou=pbx,dc=pbx,dc=com	<	
	ou=GSEMEA,dc=pbx,dc=com	>	None
	ou=others,dc=pbx,dc=com		
Options		s	
* Prompt Wait Time.			
Query Type:	By Last Name + First Name		
	🔘 By First Name + Last Name		

Figure 188: Create Dial by Name Group

First Name :	John	Last Name :	DOE
imail Address :		* User Password :	*****
Language :	Default ~	* Concurrent Registration	1

Figure 189: Configure Extension First Name and Last Name

1. Name

Enter a Name to identify the Dial by Name group.

2. Extension

Configure the direct dial extension for the Dial By Name group.

3. Available Extensions/Selected Extensions

Select available extensions from the left side to the right side as the directory for the Dial By Name group. Only the selected extensions here can be reached by the Dial By Name IVR when dialing into this group. The extensions here must have a valid first name and last name configured under Web GUI→**Extension/Trunk→Extensions** in order to be searchable in Dial By Name directory through IVR. By specifying the extensions here, the administrators can make sure unscreened calls will not reach the company employee if he/she does not want to receive them directly.

4. Prompt Wait Time

Configure "Prompt Wait Time" for Dial By Name feature. During Dial By Name call, the caller will need to input the first letters of First/Last name before this wait time is reached. Otherwise, timeout will occur and the call might hang up. The timeout range is between 3 and 60 seconds.

5. Query Type

Specify the query type. This defines how the caller will need to enter to search the directory. <u>By First Name</u>: enter the first 3 digits of the first name to search the directory. <u>By Last Name</u>: enter the first 3 digits of the last name to search the directory. <u>By Full Name</u>: enter the first 3 digits of the first name or last name to search the directory.

6. Select Type

Specify the select type on the searching result. The IVR will confirm the name/number for the party the caller would like to reach before dialing out.

<u>By Order</u>: After the caller enters the digits, the IVR will announce the first matching party's name and number. The caller can confirm and dial out if it's the destination party, or press * to listen to the next matching result if it's not the desired party to call.

<u>By Menu</u>: After the caller enters the digits, the IVR will announce 8 matching results. The caller can press number 1 to 8 to select and call, or press 9 for results in next page.

The Dial by Name group can be used as the destination for inbound route and key pressing event for IVR. The group name defined here will show up in the destination list when configuring IVR and inbound route. If Dial by Name is set as a key pressing event for IVR, user could use '*' to exit from Dial by Name, then re-enter IVR and start a new event. The following example shows how to use this option.

Edit IVR: Test			
Basic Settings	Key Pressing Events		
Press 0:	Dial By Name 🛛 🗸	DialByNameG 🗵	
Press 1:	Select an Opti 🗵		
Press 2:	Select an Opti 🗵

User Name Prompt Customization

Starting from fw 1.0.15.x, the Dial By Name feature can use the recorded name prompt of a user to announce his/her name assigned to the dialed extension. If no name prompt greeting exists, the name will be spelt out like in previous versions.

There are two ways to customize/set new user name prompt for an extension:

Upload User Name Prompt File from Web GUI

- 1. First, Users should have a pre-recorded file respecting the following format:
 - PCM encoded / 16 bits / 8000Hz mono.
 - In ".GSM" or ".WAV" format.
 - File size under 5M.
 - Filename must be set as the extension number with 18 characters max. For example, the recorded file name 1000.wav will be used for extension 1000.
- Go under web GUI PBX Settings → Voice Prompt → User Name Prompt and click on
 Upload User Name Prompt button.
- 3. Select the recorded file to upload it and press Save and Apply Settings.
- Click on 🛄 to record again the user name prompt.
- Click on to play recorded user name prompt.
- Select user name prompts and press U to delete specific file or select multiple files for deletion using the button

Record User Name via Voicemail Menu

The second option to record user name is using voicemail menu, please follow below steps:

- Dial *98 to access the voicemail
- After entering the desired extension and voicemail password, dial "0" to enter the recordings menu and then "3" to record a name.

Another option is that each user can record their own name by following below steps:

- The user dials *97 to access his/her voicemail
- After entering the voicemail password, the user can press "0" to enter the recordings menu and then "3" to record his name.

ACTIVE CALLS AND MONITOR

The active calls on the UCM6100 are displayed in Web GUI \rightarrow System Status \rightarrow Active Calls page. Users can monitor the status, hang up the call as well as barge in the active calls in real time manner.

Active Calls Status

To view the status of active calls, navigate to Web GUI \rightarrow System Status \rightarrow Active Calls. The following figure shows extension 1000 is calling 1001. 1001 is ringing.

Figure 192: Status→PBX Status→Active Calls - Ringing

The following figure shows the call between 1002 and 1003 is established.

Figure 193: Status→PBX Status→Active Calls – Call Established

The green color of the active call means the connection of call time is less than half an hour. It means this call is normal.

Figure 194: Call Connection less than half hour

The yellow color of the active call means the connection of call time is greater than half an hour but less than one hour. It means this call is a bit long.

Figure 195: Call Connection between half an hour and one hour

The red color of the active call means the connection of call time is more than one hour. It means this call could be abnormal.

Menus 🗲	Active Calls
🗥 System Status 🔹 🔨

Hang Up Active Calls

To hang up an active call, click on from in the active call dialog. Users can also click on Hang up all to hang up all active calls.

Call Monitor

During an active call, click on icon **and the monitor dialog will pop up**.

Call Barging		×
Monitor's Extension: :	2000	
Monitored Extension:	1002	~
Spy Modes::	Listen	~
Require Confirmation	~	
	Cancel Add	

Figure 197: Configure to Monitor an Active Call

In the "Monitor" dialog, configure the following to monitor an active call:

- 1. Enter an available extension for "Monitor's Extension" which will be used to monitor the active call.
- 2. "Monitored Extension" must be one of the parties in the active call to be monitored.
- 3. Select spy mode. There are three options in "Spy Mode".

Listen

In "Listen" mode, the extension monitoring the call can hear both parties in the active call but the audio of the user on this extension will not be heard by either party in the monitored active call.

• Whisper

In "Whisper" mode, the extension monitoring the call can hear both parties in the active call. The user on this extension can only talk to the selected monitored extension and he/she will not be heard by the other party in the active call. This can be usually used to supervise calls.

• Barge

In "Barge" mode, the extension monitoring the call can talk to both parties in the active call. The call will be established similar to three-way conference.

- 4. Enable or disable "Require Confirmation" option. If enabled, the confirmation of the invited monitor's extension is required before the active call can be monitored. This option can be used to avoid adding participant who has auto-answer configured or call forwarded to voicemail.
- 5. Click on "Add". An INVITE will be sent to the monitor's extension. The monitor can answer the call and start monitoring. If "Require Confirmation" is enabled, the user will be asked to confirm to monitor the call.

Another way to monitor active calls is to dial the corresponding feature codes from an extension. Please refer to *[Table 87: UCM6100 Feature Codes]* and *[*Call Recording*]* section for instructions.

CALL FEATURES

The UCM6100 supports call recording, transfer, call forward, call park and other call features via feature code. This section lists all the feature codes in the UCM6100 and describes how to use the call features.

Feature Codes

	Table 87: UCM6100 Feature Codes
Feature Maps	
Blind Transfer	 Default code: #1 Enter the code during active call. After hearing "Transfer", you will hear dial tone. Enter the number to transfer to. Then the user will be disconnected and transfer is completed. Options: Disable Allow Caller: Enable the feature code on caller side only. Allow Both: Enable the feature code on both caller and callee.
Attended Transfer	 Default code: *2 Enter the code during active call. After hearing "Transfer", you will hear the dial tone. Enter the number to transfer to and the user will be connected to this number. Hang up the call to complete the attended transfer. In case of the called party doesn't answer, users could press *0 to cancel the call and retrieve the first call leg. Options: Disable Allow Caller: Enable the feature code on caller side only. Allow Both: Enable the feature code on both caller and callee.
Seamless Transfer	 Default code: *44 (Disabled by default). Seamless Transfer allows user to perform blind transfer using UCM feature code without having music on hold presented during the transfer process, it minimizes the interruption during transfer, making the process smooth and simple. During an active call use the feature code (*44 by default) followed by the number you want to transfer to in order to perform the seamless transfer.

Disconnect	 Default code: *0 Enter the code during active call. It will disconnect the call. Options: Disable Allow Caller: Enable the feature code on caller side only. Allow Callee: Enable the feature code on callee side only. Allow Both: Enable the feature code on both caller and callee. 				
Call Park	 Default code: #72 Enter the code during active call to park the call. Options: Disable Allow Caller: Enable the feature code on caller side only. Allow Callee: Enable the feature code on callee side only. Allow Both: Enable the feature code on both caller and callee. 				
Audio Mix Record	 Default code: *3 Enter the code followed by # or SEND to start recording the audio call and the UCM6100 will mix the streams natively on the fly as the call is in progress. Options: Disable Allow Caller: Enable the feature code on caller side only. Allow Both: Enable the feature code on both caller and callee. 				
Feature Code Digits Timeout	Set the maximum interval (ms) between digits for feature code activation				
DND/Call Forward					
Do Not Disturb (DND) Activate	Default code: *77				
Do Not Disturb (DND) Deactivate	Default code: *78				
Call Forward Busy Activate	 Default Code: *90 Enter the code and follow the voice prompt. Or enter the code followed by the extension to forward the call. 				
Call Forward Busy Deactivate	Default Code: *91				
Call Forward No Answer Activate	 Default Code: *92 Enter the code and follow the voice prompt. Or enter the code followed by the extension to forward the call. 				

Call Forward No Answer Deactivate	Default Code: *93
Call Forward Unconditional Activate	 Default Code: *72 Enter the code and follow the voice prompt. Or enter the code followed by the extension to forward the call.
Call Forward Unconditional Deactivate	Default Code: *73
Feature Codes	
Voicemail Access Code	 Default Code: *98 Enter *98 and follow the voice prompt. Or dial *98 followed by the extension and # to access the entered extension's voicemail box.
My Voicemail	 Default Code: *97 Press *97 to access the voicemail box.
Agent Pause	Default Code: *83Pause the agent in all call queues.
Agent Unpause	Default Code: *84Unpause the agent in all call queues.
Paging Prefix	 Default Code: *81 To page an extension, enter the code followed by the extension number.
Intercom Prefix	 Default Code: *80 To intercom an extension, enter the code followed by the extension number.
Blacklist Add	 Default Code: *40 To add a number to blacklist for inbound route, dial *40 and follow the voice prompt to enter the number.
Blacklist Remove	 Default Code: *41 To remove a number from current blacklist for inbound route, dial *41 and follow the voice prompt to remove the number.
Call Pickup on Ringing	 Default Code: ** To pick up a call for any extension xxxx, enter the code followed by the extension number xxxx.

Pickup In-call	 Default Code: *45 (Disabled by default). If "Pickup In-call" feature is enabled, only the extensions added in "Allowed to seamless transfer" in the extension's Seamless Transfer Privilege Control List" can pick up the call.
Pickup Extension	 Default Code: *8 This code is for the pickup group, which can be assigned for each extension on the extension configuration page. If there is an incoming call to an extension, the other extensions within the same pickup group can dial *8 directly to pick up the call.
Direct Dial Voicemail Prefix	 Default Code: * This code is for the user to directly dial or transfer to an extension's voicemail. For example, directly dial *5000 will have to call go into the extension 5000's voicemail. If the user would like to transfer the call to the extension 5000's voicemail, enter *5000 as the transfer target number.
Direct Dial Mobile Phone Prefix	 Default Code: *88 If you have the permission to call mobile phone number, use this prefix plus the extension number can dial the mobile phone number of this extension directly.
Call Completion Request	 Default Code: *11 This code is for the user who wants to use Call Completion to complete a call.
Call Completion Cancel	 Default Code: *12 This code is for the user who wants to cancel Call Completion request.
Enable Spy	Check this box to enable spy feature codes. Disabled by default.
Listen Spy	 Default Code: *54 ("Enable Spy" needs to be checked) This is the feature code to listen in on a call to monitor performance. Monitor's line will be muted, and neither party will hear from the monitor's extension.
Whisper Spy	 Default Code: *55 ("Enable Spy" needs to be checked) This is the feature code to speak to one side of the call (for example, whisper to employees to help them handle a call). Only one side will be able to hear from the monitor's extension.

Barge Spy	 Default Code: *56 ("Enable Spy" needs to be checked) This is the feature code to join in on the call to assist both parties. 					
Wakeup Service	 Default Code: *36 Dial this code to access UCM wakeup service, you can add, update, activate or deactivate wakeup service. 					
PMS Wakeup Service	 Default Code: *35 Dial this code to access UCM PMS wakeup service, you can add, update, activate or deactivate PMS wakeup service. 					
Update PMS Room Status	 Default Code: *23 Use this code with maid code to update PMS room status. Choose the status to set after hearing the prompt, for example: for maid 001 dial *23001 and then 1 after hearing the prompt. 					
Presence Status	 Dial this code to set the presence status of the extension. Possible options are: "unavailable" "available" "available" "away" "chat "dnd "userdef" 					
Dynamic Agent Logout	Default Code: *85Use this code to logout the dynamic agent from all queues.					

The UCM6100 also allows user to one click enable / disable specific feature code as shown below:

Figure 198: Enable/Disable Feature codes

Parking Lot

User can create parking lots and their related slots under Web $GUI \rightarrow Call Features \rightarrow Parking Lot$. In the Parking Lot page, users can create lots of their own. This allows different groups within an organization to have their own parking lots instead of sharing one large parking lot with others. While creating a new parking lot, users can assign it a range that they think is appropriate for the group that will use the parking lot.

Parking Lot				
Parking Lot Settings	Parking Lot Status			
+ Create New Parking Lot				
Extension 🌲		Name 🌲	Slots 🜲	Options
700		Sales	701-720	
730	٩	Marketing	731-739	r 💼
740		Support	741-769	r 💼
		Total: 3 < <u>1</u> >		10 / page > Goto 1

Figure 199 : Parking Lot

User can create a new Parking lot by clicking on button "Create New Parking Lot" + Create New Parking Lot

Create New Parking Lot			
* Parking Lot Extension:		* Parking Lot Name:	
* Parking Slots :		Use parklot as extension:	
* Parking Timeout (s):	300	Music On Hold Classes:	Default ~
Failover Destination :		Ring-All Callback on Timeout:	
Forward to Destination on			
Timeout :			

Figure 200 : New Parking Lot

Table 88 : Parking Lot

Parking Lot Extension	 Default Extension: 700 During an active call, initiate blind transfer and then enter this code to park the call.
Parking Lot Name	Set a name to the parking lot
Parked Slots	 Default Extension: 701-720 These are the extensions where the calls will be parked, i.e., parking lots that the parked calls can be retrieved.
Use Parklot as Extension	• If checked, the parking lot number can be used as extension. The user can transfer the call to the parking lot number to park the call. Please note this parking lot number range might conflict with extension range.
Parking Timeout (s)	 Default setting is 300 seconds and the maximum limit is 99.999 seconds. This is the timeout allowed for a call to be parked. After the timeout, if the call is not picked up, the extension who parks the call will be called back.
Music On Hold Classes	Select the Music on Hold Class.
Failover Destination	Configures a callback failover destination when the extension that is called back is busy. The call will be routed to the destination number and this reduces the chance of dropping parked calls.
Ring All Callback on Timeout	If enabled, all registered endpoints of the extension will ring when callback occurs. Otherwise, the original endpoint will be called back.
Forward to destination on timeout	If enabled, the call will be routed to the configured destination upon timeout. Otherwise, the call will be routed back to the original caller.

	This option appears once Forward to Destination on Timeout is
Timeout Destination	enabled. Upon park timeout, the call will be routed to the configured
	destination.

Call Park

The UCM6100 provides call park and call pickup features via feature code.

Park a Call

There are two feature codes that can be used to park the call.

Feature Maps→Call Park (Default code #72)
 During an active call, press #72 and the call will be parked. Parking lot number (default range 701 to 720)
 will be announced after parking the call.

• Feature Misc→Call Park (Default code 700)

During an active call, initiate blind transfer (default code #1) and then dial 700 to park the call. Parking lot number (default range 701 to 720) will be announced after parking the call.

Retrieve Parked Call

To retrieve the parked call, simply dial the parking lot number and the call will be established. If a parked call is not retrieved after the timeout, the original extension who parks the call will be called back.

Monitor Call Park CID Name Information (GXP21xx Phones Only)

Users can see the CID name information of parked calls. VPK/MPKs must be configured as "Monitored Call Park" with the desired parking lot extension. The display will alternate between displaying the parking lot extension and the call's CID name. There is no need to configure anything on the UCM.

Note: This feature requires Grandstream GXP21xx new firmware support. This new firmware is not available in Grandstream website yet. Please check GXP21xx upcoming firmware release information for availability.

Figure 201 : Monitored call park CID name

Call Recording

The UCM6100 allows users to record audio during the call. If "Auto Record" is turned on for an extension, ring group, call queue or trunk, the call will be automatically recorded when there is established call with it. Otherwise, please follow the instructions below to manually record the call.

- 1. Make sure the feature code for "Audio Mix Record" is configured and enabled.
- 2. After establishing the call, enter the "Audio Mix Record" feature code (by default it's *3) followed by # or SEND to start recording.
- 3. To stop the recording, enter the "Audio Mix Record" feature code (by default it's *3) followed by # or SEND again. Or the recording will be stopped once the call hangs up.
- 4. The recording file can be retrieved under Web GUI→CDR. Click on to show and play the recording or click on to download the recording file.

CDR

Figure 203: Download Recording File from Recording Files Page

Enable Spy

If "Enable Spy" option is enabled, feature codes for Listen Spy, Whisper Spy and Barge Spy are available for users to dial from any extension to perform the corresponding actions.

Assume a call is on-going between extension A and extension B, user could dial the feature code from extension C to listen on their call (*54 by default), whisper to one side (*55 by default), or barge into the call (*56 by default). Then the user will be asked to enter the number to call, which should be either side of the active call, extension A or B in this example.

▲ Caution:

"Enable Spy" allows any user to listen to any call by feature codes. This may result in the leakage of user privacy.

Shared Call Appearance (SCA)

Shared Call Appearance (SCA) functionality has been added to the UCM. With SCA, users can assign multiple devices to one extension, configure endpoints to monitor that extension, make actions on behalf of that extension such as viewing call status and placing and receiving calls, and even barging into existing calls. To configure the SCA functionality, please follow the steps below:

1. Users can enable SCA by navigating to the Extensions page, editing the desired extension, and enabling the option SCA.

Edit Extension: 1000								
Basic Settings	Media	Features	Specific Time	Follow Me				
General								
* Extension :		1000		CallerID Number:	1000			
* Permission :		Internal	~	* SIP/IAX Password :	••••			
AuthID:				Voicemail:	Enable Local Voicemail			
* Voicemail Pas	sword:	•••••		Q Skip Voicemail Password				
				Verification:				
Send Voicema	il to Email:	Default	~	Keep Voicemail after	Default			
				Emailing :	·			
Enable Keep-a	alive:			* Keep-alive Frequency:	60			
Disable This E	xtension :			Enable SCA:				

Note: With SCA enabled, the Concurrent Registrations field can only have a value of 1.

Figure 204: Enabling SCA Option under Extension's settings.

 After enabling the option, navigate to *Call Features->SCA*. The newly enabled SCA extension will be listed. Click the "+" button under the Options column to add a number that will share the main extension's call appearance, which will be called private numbers.

SCA					
SCA Number Group	SCA Line Status				
Status 🌩	Shared Line 🎈	Role	IP and Port 🔶	Subscribed 🌻	Options
+ • Unavailable	1000	shared		no	⊕ Ľ

Figure 205: SCA Number Configuration

3. Configure the private number as desired.

Add Private Number		×
* Private Number:		
Related Shared Line:		
Enable This Number:	V	
Allow Origination from This Number:		
Allow Termination to This Number:		
	Cancel	

Figure 206: SCA Private Number Configuration

4. Once the private number has been created, users must now register a device to it. To properly register a device to the private number, use the configured private number as the SIP User ID. Auth ID and Password will be the same as the main extension's. Once registration is complete, SCA is now configured.

Edit SCA Number Group	:
* Shared Line Number:	1000 v
Allow Call Retrieve from	
Another Location:	
Alert All Appearances for	
Group Paging Calls :	
Multiple Call Arrangement:	
Allow Bridging between	
Locations:	
Bridge Warning Tone:	Barge-In only v

Figure 207: SCA Options

SCA has various options to change its behavior:

- Allow Call Retrieve from Another Location Allows users to retrieve held calls using any device associated with the SCA extension.
- Alert All Appearances for Group Paging Calls Alerts all devices associated with the SCA extension.
- Multiple Call Arrangement Allows all devices associated with the SCA extension to make different calls at the same time.
- Allow Bridging between Locations Allows devices associated with the SCA extension to barge into existing calls of the same SCA group.
- Bridge Warning Tone Notification sound that will play when a party barges into the call. Three options are available :
 - None No notification sound will play
 - \circ Barge-In Only The notification sound will play once when a party barges in.
 - Barge-In and Repeate The notification sound will play when a party barges in and will play again after every 30 seconds.
- 5. Next, configure the VPK or MPK to Shared for both the main extension and the private number. SCA is now configured for both endpoint devices.

The following table describe the SCA Number configuration setting:

Private Number	Configures the private number for the SCA.
Related Shared Line	Display the related shared line.
Enable This Number	Whether enable this private number. If not enabled, this private number is only record in DB, it will not affect other system feature.
Allow Origination from This Number	Enable this option will allow calling from this private number. By default, it's enabled.
Allow Termination to This Number	Enable this option will allows calls to this private number. By default, it's enabled.

Table 89: Add SCA Private Number

The following table describe the options available when editing the SCA number:

Table 90: Editing the SCA Number

Shared Line Number	While SCA is enabled, this number will be the same as the extension number.
Allow Call Retrieve from Another Location	Allows remote call retrieval. Must be enabled in public hold. By default, it's enabled.
Alert All Appearances for Group	Allows all SCA group members to ring when the SCA shared number is paged. If disabled, only the SCA shared number will ring

Paging Calls	when paged. By default, it's disabled.		
Multiple Call Arrangement	Allows simultaneous calls in an SCA group. By default, it's disabled.		
Allow Bridging between Locations	Allows location bridging for SCA group. Must be enabled when using the Barge-In feature. By default, it's disabled.		
Bridge Warning Tone	 Configures the notification in the bridge when another party join. None: No notification sound. Barge-In only: Notification sound will play when another party join. Barge-In and Repeat: Notification sound will play when another party joins and repeat every 30 seconds. By default, it's set to "Barge-In Only". 		

PBX SETTINGS

This section describes internal options that haven't been mentioned in previous sections yet. The settings in this section can be applied globally to the UCM6100, including general configurations, jitter buffer, RTP settings, ports config and STUN monitor. The options can be accessed via Web GUI**→PBX Settings→General Settings**.

PBX Settings/General Settings

	Table 91: Internal Options/General
General Preferences	
Global Outbound CID	Configure the global CallerID used for all outbound calls when no other CallerID is defined with higher priority. If no CallerID is defined for extension or trunk, the global outbound CID will be used as CallerID.
Global Outbound CID Name	Configure the global CallerID Name used for all outbound calls. If configured, all outbound calls will have the CallerID Name set to this name. If not, the extension's CallerID Name will be used.
Ring Timeout	Configure the number of seconds to ring an extension before the call goes to the user's voicemail box. The default setting is 60. Note: This is the global value used for each extension if "Ring Timeout" field is left empty on the extension configuration page.
Call Duration Limit	Configure the maximum duration of call-blocking.
Record Prompt	If enabled, users will hear voice prompt before recording is started or stopped. For example, before recording, the UCM6100 will play voice prompt "The call will be recorded". The default setting is "No".
Device Name	The name of the UCM you are using.
Extension Preferences	
	If enabled, strong password will be enforced for the password created on the UCM6100. The default setting is enabled. Strong Password Rules:
Enforce Strong Passwords	1. Password for voicemail, voicemail group, outbound route, DISA, call queue and conference require non-repetitive and non-sequential digits, with a minimum length of 4 digits. Repetitive digits pattern (such as 0000, 1111, 1234, 2345, and etc), or common digits pattern (such as 111222, 321321 and etc) are not allowed to be configured as password.

	 2. Password for extension registration, Web GUI admin login, LDAP and LDAP sync requires alphanumeric characters containing at least two categories of the following, with a minimum length of 4 characters. Numeric digits Lowercase alphabet characters Uppercase alphabet characters Special characters
Enable Random Password	If enabled, random password will be generated when the extension is created. The default setting is "Yes". It is recommended to enable it for security purpose.
Enable Auto E-mail Notification	If enabled, UCM6100 will send Email notification to user automatically after editing extension settings or adding a new extension.
Disable Extension Range	If set to "Yes", users could disable the extension range pre- configured/configured on the UCM6100. The default setting is "No". Note: It is recommended to keep the system assignment to avoid inappropriate usage and unnecessary issues.
Extension Ranges	 The default extension range assignment is: <u>User Extensions</u>: 1000-6299 User Extensions is referring to the extensions created under Web GUI→Extension/Trunk→Extensions page. <u>Pick Extension5</u>: 4000-4999 This refers to the extensions that can be manually picked from end device when being provisioned by the UCM6100. There are two related options in zero config page→Auto Provision Settings, "Pick Extension Segment" and "Enable Pick Extension". If "Enable Pick Extension" under zero config settings is selected, the extension list defined in "Pick Extension Segment" will be sent out to the device after receiving the device's request. This "Pick Extension Segment" should be a subset of the "Pick Extensions" range here. This feature is for the GXP series phones that support selecting extension to be provisioned via phone's LCD. <u>Auto Provision Extensions</u>: 5000-6299 This sets the range for "Zero Config Extension Segment" which is the extensions can be assigned on the UCM6100 to provision the end device. <u>Conference Extensions</u>: 6300-6399

- <u>Ring Group Extensions</u>: 6400-6499
- Queue Extensions: 6500-6599
- Voicemail Group Extensions: 6600-6699
- <u>IVR Extensions</u>: 7000-7100
- Dial By Name Extensions: 7101-7199
- Fax Extensions: 7200-8200

PBX Settings/RTP Settings

RTP Settings

Table 92: Internal Options/RTP Settings			
RTP Start	Configure the RTP port starting number. The default setting is 10000.		
RTP End	Configure the RTP port ending address. The default setting is 20000.		
Strict RTP	Configure to enable or disable strict RTP protection. If enabled, RTP packets that do not come from the source of the RTP stream will be dropped. The default setting is "Disable".		
RTP Checksums	Configure to enable or disable RTP Checksums on RTP traffic. The default setting is "Disable".		
ICE Support	Configure whether to support ICE. The default setting is enabled. ICE is the integrated use of STUN and TURN structure to provide reliable VoIP or video calls and media transmission, via a SIP request/ response model or multiple candidate endpoints exchanging IP addresses and ports, such as private addresses and TURN server address.		
STUN Server	Configure STUN server address. STUN protocol is a Client/Server and also a Request/Response protocol. It's used to check the connectivity between the two terminals, such as maintaining a NAT binding entries keep-alive agreement. The default STUN Server is stun.ipvideotalk.com. Valid format: [(hostname IP-address) [':' port] The default port number is 3478 if not specified.		

Payload

The UCM6100 payload type for audio codecs and video codes can be configured here.

Table 93: Internal Options/Payload			
AAL2-G.726	Configure payload type for ADPCM (G.726, 32kbps, AAL2 codeword packing). The default setting is 112.		
DTMF	Configured payload type for DTMF. The default setting is 101.		
G.721 Compatible	Configure to enable/disable G.721 compatible. The default setting is Yes.		
G.726	Configure the payload type for G.726 if "G.721 Compatible" is disabled. The default setting is 111.		
iLBC	Configure the payload type for iLBC. The default setting is 97.		
H.264	Configure the payload type for H.264. The default setting is 99.		
H.265	Configure the payload type for H.264. The default setting is 114.		
H.263P	Configure the payload type for H.263+. The default setting is 100 103.		
VP8	Configure the payload type for VP8. The default settings is 108.		

PBX Settings/Voice Prompt Customization

Record New Custom Prompt

In the UCM6100 Web GUI**→PBX Settings→Voice Prompt→Custom Prompt** page, click on "Record New Custom Prompt" and follow the steps below to record new IVR prompt.

Record New Cus	tom Prompt	×
* File Name:	OfficeClosed	
Format:	GSM ~	
Extension:	1000 "John DO ~	
	Cancel Record	

Figure 208: Record New Custom Prompt

- 1. Specify the IVR file name.
- 2. Select the format (GSM or WAV) for the IVR prompt file to be recorded.

- 3. Select the extension to receive the call from the UCM6100 to record the IVR prompt.
- 4. Click the "Record" button. A request will be sent to the UCM6100. The UCM6100 will then call the extension for recording the IVR prompt from the phone.
- 5. Pick up the call from the extension and start the recording following the voice prompt.
- 6. The recorded file will be listed in the IVR Prompt web page. Users could select to re-record, play or delete the recording.

Upload Custom Prompt

If the user has a pre-recorded IVR prompt file, click on "Upload Custom Prompt" in Web GUI \rightarrow PBX Settings \rightarrow Voice Prompt \rightarrow Custom Prompt page to upload the file to the UCM6100. The following are required for the IVR prompt file to be successfully uploaded and used by the UCM6100:

- PCM encoded.
- 16 bits.
- 8000Hz mono.
- In .mp3 or .wav format; or raw/ulaw/alaw/gsm file with .ulaw or .alaw suffix.
- File size under 5M.

Choose file to upload	×
Choose file to upload Choose file to upload	
Sound file must be PCM encoded, 16 bits at 8000Hz mono with mp3/wav format, or u ulaw/alaw/gsm file with .mp3/.wav/.ulaw/.alaw/.gsm suffix. The file size must be less t 5MB. Note: The mp3 sound file will be transcoded to wav format.	

Figure 209: Upload Custom Prompt

Click on "choose file to upload" to start uploading. Once uploaded, the file will appear in the Custom Prompt web page.

Download All Custom Prompt

On the UCM61XX, the users can download all custom prompts from UCM Web GUI to local PC. To download all custom prompt, log in UCM Web GUI and navigate to **PBX Settings**→**Voice Prompt**→**Custom Prompt** and

click on <u>Download All Custom Prompt</u>. The following window will pop up in order to set a name for the downloaded file.

Download All	Custom Prompt	×
* File Name:	prompt_20170505_091512	
	Cancel Download	

Figure 210: Download All Custom Prompt

Note: The downloaded file will have a .tar extension.

PBX Settings/Call Failure Tone Settings

SIP Trunk Prompt Tone

Prompt Tone Settings tab has been added to the UCM to help users choose which prompt will be played by the UCM during call failure, the following voice message responses have been added and can be set to be played for 4XX, 5XX, and 6XX call failures:

- Default for 404 and 604 status codes: "Your call can't be completed as dialed. Please check the number and dial again."
- Default for 5xx status codes: "Server error. Please check your device."
- Default for 403 and 603 status codes: "The call was rejected by the server. Please try again later."
- Default for all other status codes: "All circuits are busy now. Please try again later."

Additionally, custom voice messages recorded and uploaded in **PBX Settings** \rightarrow **Voice Prompt** \rightarrow **Custom Prompt** can be used for these failure responses instead of the default messages.

Prompt To	one Settings			Save Cancel

PBX Settings/Jitter Buffer

Table 94: Internal Options/Jitter Buffer

SIP Jitter Buffer		
Enable Jitter Buffer	Select to enable jitter buffer on the sending side of the SIP channel. The default setting is "No".	
Jitter Buffer Size	Configure the time (in ms) to buffer. This is the jitter buffer size used in "Fixed" jitter buffer, or used as the initial time for "adaptive" jitter buffer. The default setting is 100.	
Max Jitter Buffer	Configure the maximum time (in ms) to buffer for "Adaptive" jitter buffer implementation, or used as the jitter buffer size for "Fixed" jitter buffer implementation. The default setting is 200.	
Implementation	 Configure the jitter buffer implementation on the sending side of a SIP channel. The default setting is "Fixed". Fixed The size is always equal to the value of "Max Jitter Buffer". Adaptive The size is adjusted automatically and the maximum value equals to the value of "Max Jitter Buffer". 	

PBX Settings/Recordings Storage

The UCM6100 supports call recordings automatically or manually and the recording files can be saved in external storage plugged in the UCM6100 or on the UCM6100 locally. To manage the recording storage, users can go to UCM6100 Web GUI \rightarrow PBX Settings \rightarrow Recordings Storage page and select whether to store the recording files in USB Disk, SD card or locally on the UCM6100.

Recordings Storage		
	Enable auto change:	
	USB Disk :	۲
	Local:	

Figure 213: Settings→Recordings Storage

- If "Enable Auto Change" is selected, the recording files will be automatically saved in the available USB Disk or SD card plugged into the UCM6100. If both USB Disk and SD card are plugged in, the recording files will be always saved in the USB Disk.
- If "Local" is selected, the recordings will be stored in UCM6100 internal storage.
- If "**USB Disk**" or "**SD Card**" is selected, the recordings will be stored in the corresponding plugged in external storage device. Please note the options "USB Disk" and "SD Card" will be displayed only if they are plugged into the UCM6100.

Once "USB Disk" or "SD Card" is selected, click on "OK". The user will be prompted to confirm to copy the local files to the external storage device.

?	× Change success to USB. Do you want to copy the local files to the USB?	
	Cancel	

Figure 214: Recordings Storage Prompt Information

Click on "OK" to continue. The users will be prompted a new dialog to select the categories for the files to be copied over.

Edit Please select the files that you want to copy.:
It may take some time to copy files completely.
Recording Files : 🔽
Conference : 🗸
Queue :
All:

Figure 215: Recording Storage Category

On the UCM6100, recording files are generated and exist in 3 categories: normal call recording files, conference recording files, and call queue recording files. Therefore, users have the following options when select the categories to copy the files to the external device:

- **Recording Files**: Copy the normal recording files to the external device.
- **Conference**: Copy the conference recording files to the external device.
- **Queue**: Copy the call queue recording files to the external device.
- All: Copy all recording files to the external device.

PBX Settings/NAS

The UCM supports adding and backing up recordings to a network-attached storage (NAS) server. To configure a NAS server.

Table 95: NAS Settings	
Enable	Enabled / Disable the NAS recording functionality.
Host	Configure the Domain or IP address of the NAS server.
	Note : Currently, only IP addresses are supported in the Host/IP field.
Share Name	Specify the name of the shared folder.
Username	Specify the account username to access the NAS server.
Password	Configure the account password to access the NAS server.
Status	If configured correctly, the Status field will show "Mounted", and the newly
	added NAS server will be shown on the Mounted Netdisk List. Additionally, the
	NAS will appear as a selectable storage option in the PBX Settings->Recording
	Storage page and CDR->Recording Files page.

SIP SETTINGS

The UCM6100 SIP global settings can be accessed via Web GUI**→PBX Settings→SIP Settings**.

SIP Settings/General

Table 96: SIP Settings/General	
Realm For Digest Authentication	Configure the host name or domain name for the UCM6100. Realms MUST be globally unique according to RFC3261. The default setting is Grandstream.
Bind UDP Port	Configure the UDP port used for SIP. The default setting is 5060.
Bind IPv4 Address	Configure the IPv4 address to bind to. The default setting is 0.0.0.0, which means binding to all addresses.
Bind IPv6 Address	Configure the IPv6 address to bind to. The default is : "[::]" and it means to bind to all IP addresses.
Allow Guest Calls	If enabled, the UCM6100 allows unauthorized INVITE coming into the PBX and the call can be made. The default setting is "No". Warning: Please be aware of the potential security risk when enabling "Allow Guest Calls" as this will allow any user with the UCM6100 address to dial into the UCM6100.
Allow Transfer	If set to "No", all transfers initiated by the endpoint in the UCM6100 will be disabled (unless enabled in peers or users). The default setting is "Yes".
MWI From	When sending MWI NOTIFY requests, this value will be used in the "From:" header as the "name" field. If no "From User" is configured, the user" field of the URI in the "From:" header will be filled with this value.
Enable Diversion Header	If disabled, the UCM will not forward the diversion header.

SIP Settings/MISC

Table 97: SIP Settings/Misc

Outbound SIP Registrations	
Register Timeout	Configure the register retry timeout (in seconds). The default setting is 20.
Register Attempts	Configure the number of registration attempts before the UCM6100 gives up. The default setting is 0, which means the UCM6100 will keep trying until the server side accepts the registration request.
Video	
Max Bit Rate (kb/s)	Configure the maximum bit rate (in kb/s) for video calls. The default setting is 384.

Select to enable video support in SIP calls. The default setting is "Yes".	
If enabled, when rejecting an incoming INVITE or REGISTER request, the UCM6100 will always reject with "401 Unauthorized" instead of notifying the requester whether there is a matching user or peer for the request. This reduces the ability of an attacker to scan for valid SIP usernames. The default setting is "No".	
igh	
If enable, and if the service doesn't know the attribute of FEC/FECC/BFCP, then the attribute will be passthrough.	
If enabled, cell regetiation will use final regenerate SDD	
If enabled, call negotiation will use final response SDP.	
If enabled, the UCM will call back to the transferrer when blind transfer fails (reason of failure includes: busy and no answer). Note: This feature takes effect only on internal calls.	
Configure the timeout in (s) for the transferrer waiting for the destination to answer. Default is 60s.	
DNS	
This option affects the DNS query only during Calls. When you choose A&AAAA, UCM will do both A and AAAA type DNS query; when you chose A, UCM will only do A type DNS query; and when you chose AAAA, UCM will only do AAAA type DNS query.	
Configure the UCM to forward HOLD requests instead of processing holds internally. This serves to meet the standards set by some providers that require HOLD requests to be passed along from endpoint to endpoint. This option is disabled by default. Note : Enabling this option may cause hold retrieval issues and MOH to not be heard.	

SIP Settings/Session Timer

Force Timer	If checked, always request and run session timer.
Timer	If checked, run session timer only when requested by other UA.
Session Expire	Configure the maximum session refresh interval (in seconds). The default setting is 1800.
Min SE	Configure the minimum session refresh interval (in seconds). The default setting is 90.

SIP Settings/TCP and TLS

	Table 99: SIP Settings/TCP and TLS
TCP Enable	Configure to allow incoming TCP connections with the UCM6100. The default setting is "No".
TCP Bind Address	Configure the IP address for TCP server to bind to. 0.0.0.0 means binding to all interfaces. The port number is optional. If not specified, 5060 will be used.
TLS Enable	Configure to allow incoming TLS connections with the UCM6100. The default setting is "No".
TLS Bind Address	Configure the IP address for TLS server to bind to. 0.0.0.0 means binding to all interfaces. The port number is optional. If not specified, 5061 will be used. Note: The IP address must match the common name (hostname) in the certificate. Please do not bind a TLS socket to multiple IP addresses. For details on how to construct a certificate for SIP, please refer to the following document: <u>http://tools.ietf.org/html/draft-ietf-sip-domain-certs</u>
TLS Client Protocol	Select the TLS protocol for outbound client connections. The default setting is TLSv1.
TLS Do Not Verify	If enabled, the TLS server's certificate won't be verified when acting as a client. The default setting is "Yes".
TLS Self-Signed CA	This is the CA certificate if the TLS server being connected to requires self-signed certificate, including server's public key. This file will be renamed as "TLS.ca" automatically. Note: The size of the uploaded ca file must be under 2MB.
TLS Cert	This is the Certificate file (*.pem format only) used for TLS connections. It contains private key for client and signed certificate for the server. This file will be renamed as "TLS.pem" automatically. Note: The size of the uploaded certificate file must be under 2MB.
TLS CA Cert	This file must be named with the CA subject name hash value. It contains CA's (Certificate Authority) public key, which is used to verify the accessed servers. Note: The size of the uploaded CA certificate file must be under 2MB.
TLS CA List	Display a list of files under the CA Cert directory.

SIP Settings/NAT

External Host	Configure a static IP address and port (optional) used in outbound SIP messages if the UCM6100 is behind NAT. If it is a host name, it will only be looked up once.
Use IP address in SDP	If enabled, the SDP connection will use the IP address resolved from the external host.
External TCP Port	Configure the externally mapped TCP port when the UCM6100 is behind a static NAT or PAT.
External TLS Port	Configures the externally mapped TLS port when UCM6100 is behind a static NAT or PAT.
Local Network Address	Specify a list of network addresses that are considered inside of the NAT network. Multiple entries are allowed. If not configured, the external IP address will not be set correctly. A sample configuration could be as follows: 192.168.0.0/16

Table 100: SIP Settings/NAT

SIP Settings/TOS

Table 101: SIP Settings/ToS

	-
ToS For SIP	Configure the Type of Service for SIP packets. The default setting is None.
ToS For RTP Audio	Configure the Type of Service for RTP audio packets. The default setting is None.
ToS For RTP Video	Configure the Type of Service for RTP video packets. The default setting is None.
Default Incoming/Outgoing Registration Time	Configure the default duration (in seconds) of incoming/outgoing registration. The default setting is 120.
Max Registration/Subscrip tion Time	Configure the maximum duration (in seconds) of incoming registration and subscription allowed by the UCM6100. The default setting is 3600.
Min Registration/Subscrip tion Time	Configure the minimum duration (in seconds) of incoming registration and subscription allowed by the UCM6100. The default setting is 60.
Enable Relaxed DTMF	Select to enable relaxed DTMF handling. The default setting is "No".

DTMF Mode	Select DTMF mode to send DTMF. The default setting is RFC2833. If "Info" is selected, SIP INFO message will be used. If "Inband" is selected, 64-kbit codec PCMU and PCMA are required. When "Auto" is selected, "RFC2833" will be used if offered, otherwise "Inband" will be used. The default setting is "RFC2833".
RTP Timeout	During an active call, if there is no RTP activity within the timeout (in seconds), the call will be terminated. The default setting is no timeout. Note: This setting doesn't apply to calls on hold.
RTP Hold Timeout	When the call is on hold, if there is no RTP activity within the timeout (in seconds), the call will be terminated. This value of RTP Hold Timeout should be larger than RTP Timeout. The default setting is no timeout.
RTP Keep-alive	This feature can be used to avoid abnormal call drop when the remote provider requires RTP traffic during proceeding. For example, when the call goes into voicemail and there is no RTP traffic sent out from UCM, configuring this option can avoid voicemail drop. When configured, RTP keep-alive packet will be sent to remote party at the configured interval. If set to 0, RTP keep-alive is disabled.
100rel	Configure the 100rel setting on UCM6100. The default setting is "Yes".
Trust Remote Party ID	Configure whether the Remote-Party-ID should be trusted. The default setting is "No".
Send Remote Party ID	Configure whether the Remote-Party-ID should be sent or not. The default setting is "No".
Generate In-Band Ringing	 Configure whether the UCM6100 should generate inband ringing or not. The default setting is "Never". Yes: The UCM6100 will send 180 Ringing followed by 183 Session Progress and in-band audio. No: The UCM6100 will send 180 Ringing if 183 Session Progress has not been sent yet. If audio path is established already with 183 then send inband ringing. Never: Whenever ringing occurs, the UCM6100 will send 180 Ringing as long as 2000K has not been set yet. Inband ringing will not be generated even the end point device is not working properly.
Server User Agent	Configure the user agent string for the UCM6100.
Send Compact SIP Headers	If enabled, compact SIP headers will be sent. The default setting is "No".

Transparent Call-Info header

UCM supports transparent call info header in order to integrate GDS door system with GXP21XX Color phones, the UCM will forward the call-info header to the phone in order to request the live view from GDS door system and give the option to open the door via softkey.

Figure 216: Transparent Call-Info

IAX SETTINGS

The UCM6100 IAX global settings can be accessed via Web GUI**→PBX Settings→IAX Settings**.

IAX Settings/General

Table 102: IAX Settings/General	
Bind Port	Configure the port number that the IAX2 will be allowed to listen to. The default setting is 4569.
Bind Address	Configure the address that the IAX2 will be forced to bind to. The default setting is 0.0.0.0, which means all addresses.
IAX1 Compatibility	Select to configure IAX1 compatibility. The default setting is "No".
No Checksums	If selected, UDP checksums will be disabled and no checksums will be calculated/checked on systems supporting this feature. The default setting is "No".
Delay Reject	If enabled, the IAX2 will delay the rejection of calls to avoid DOS. The default setting is "No".
ADSI	Select to enable ADSI phone compatibility. The default setting is "No".
Music On Hold Interpret	Specify which Music On Hold class this channel would like to listen to when being put on hold. This music class is only effective if this channel has no music class configured and the bridged channel putting the call on hold has no "Music On Hold Suggest" setting.
Music On Hold Suggest	Specify which Music On Hold class to suggest to the bridged channel when putting the call on hold.
Bandwidth	Configure the bandwidth for IAX settings. The default setting is "Low".

IAX Settings/Registration

Table 103: IAX Settings/Registration

IAX Registration Options				
Min Reg Expire	Configure the minimum period (in seconds) of registration. The default setting is 60.			
Max Reg Expire	Configure the maximum period (in seconds) of registration. The default setting is 3600.			
IAX Thread Count	Configure the number of IAX helper threads. The default setting is 10.			
IAX Max Thread Count	Configure the maximum number of IAX threads allowed. The default is 100.			

Auto Kill	If set to "yes", the connection will be terminated if ACK for the NEW message is not received within 2000ms. Users could also specify number (in milliseconds) in addition to "yes" and "no". The default setting is "yes".		
Authentication Debugging	If enabled, authentication traffic in debugging will not show. The default is "No".		
Codec Priority	 Configure codec negotiation priority. The default setting is "Reqonly". Caller Consider the callers preferred order ahead of the host's. Host Consider the host's preferred order ahead of the caller's. Disabled Disable the consideration of codec preference all together. Reqonly This is almost the same as "Disabled", except when the requested format is not available. The call will only be accepted if the requested format is available. 		
Type of Service	Configure ToS bit for preferred IP routing.		
IAX Trunk Options			
Trunk Frequency	Configure the frequency of trunk frames (in milliseconds). The default is 20.		
Trunk Time Stamps	If enabled, time stamps will be attached to trunk frames. The default is "No".		

IAX Settings/Security

Table 104: IAX Settings/Static Defense

Call Token Optional	Enter a single IP address (e.g., 11.11.11.11) or a range of IP addresses (11.11.11.11/22.22.22.22) for which call token validation is not required.
Max Call Numbers	Configure the maximum number of calls allowed for a single IP address.
Max Unvalidated Call Numbers	Configure the maximum number of Unvalidated calls for all IP addresses.
Call Number Limits	Configure to limit the number of calls for a give IP address of IP range.
IP or IP Range	Enter the IP address (11.11.11.11) or a range of IP addresses (11.11.11.11/22.22.22.22) to be considered for call number limits.

INTERFACE SETTINGS

Analog Hardware

The analog hardware (FXS port and FXO port) on the UCM6100 will be listed in this page. Click on \square to edit signaling preference for FXS port or configure ACIM settings for FXO port.

Select "Loop Start" or "Kewl Start" for each FXS port. And then click on "Update" to save the change.

Edit Analog Ports: Signaling Preference					
Port 1::	Loop Start	~			
Port 2::	Kewl Start	~			

Figure 217: FXS Ports Signaling Preference

For FXO port, users could manually enter the ACIM settings by selecting the value from dropdown list for each port. Or users could click on "Detect" and choose the detection algorithm, two algorithms exists (ERL, Pr) for the UCM6100 to automatically detect the ACIM value. The detecting value will be automatically filled into the settings.

ACIM Setting		
ACIM Detection :	Detect	
Detect Option:	ERL	~
Port 1::	600 Ω	~
Port 2::	600 Ω	~

Figure 218: FXO Ports ACIM Settings

Table 105: PBX Interface Settings

 Tone Region
 Select country to set the default tones for dial tone, busy tone, ring tone and etc to be sent from the FXS port. The default setting is "United States of America (USA)".

Advanced Settings	
FXO Opermode	Select country to set the On-Hook Speed, Ringer Impedance, Ringer Threshold, Current Limiting, TIP/RING voltage adjustment, Minimum Operational Loop Current, and AC Impedance as predefined for your country's analog line characteristics. The default setting is "United States of America (USA)".
FXS Opermode	Select country to set the On-Hook Speed, Ringer Impedance, Ringer Threshold, Current Limiting, TIP/RING voltage adjustment, Minimum Operational Loop Current, and AC Impedance as predefined for your country's analog line characteristics. The default setting is "United States of America (USA)".
FXS TISS Override	Configure to enable or disable override Two-Wire Impedance Synthesis (TISS). The default setting is No. If enabled, users can select the impedance value for Two-Wire Impedance Synthesis (TISS) override. The default setting is 600Ω.
PCMA Override	Select the codec to be used for analog lines. North American users should choose PCMU. All other countries, unless already known, should be assumed to be PCMA. The default setting is PCMU. Note: This option requires system reboot to take effect.
Boost Ringer	Configure whether normal ringing voltage (40V) or maximum ringing voltage (89V) for analog phones attached to the FXS port is required. The default setting is "Normal".
Fast Ringer	Configure to increase the ringing speed to 25HZ. This option can be used with "Low Power" option. The default setting is "Normal".
Low Power	Configure the peak voltage up to 50V during "Fast Ringer" operation. This option is used with "Fast Ringer". The default setting is "Normal".
Ring Detect	If set to "Full Wave", false ring detection will be prevented for lines where Caller ID is sent before the first ring and proceeded by a polarity reversal, as in UK. The default setting is "Standard".
FXS MWI Mode	 Configure the type of Message Waiting Indicator on FXS lines. The default setting is "FSK". FSK: Frequency Shift Key Indicator NEON: Light Neon Bulb Indicator.

FXO Frequency Tolerance Allows users to adjust the tolerance of the FXO ringing frequency. 63Hz is considered the standard value and is selected by default.

DAHDI Settings

When users encounter issues such as audio delay in outbound calls using the analog trunk, they can adjust DAHDI settings on the UCM to attempt to lessen or resolve the issues.

Interface Settings		
Analog Hardware	ahdi Settings	
* Analog Buffers:	32,half	~
* Fax Buffers Policy:	32,half	~
	L	

Figure 219: DAHDI Settings

For the value of the option such as "32, half":

The number in the option indicates the number of read/write buffers for TDM (DAHDI).

The "Half", "Immediate" or "Full" option indicates the strategy when reading/writing data from buffer.

- "Half": Data will be read/written from buffer when half of the buffer is occupied with data.
- "Immediate": Read/write from buffer whenever there is data occupying the buffer.
- "Full": Data will be read/written from buffer when buffer is fully occupied with data.

Normally, DAHDI settings should be kept default and should be adjusted only when users encounter analog trunk/Fax-related issues.

API Configuration

The UCM6100 supports third party billing interface API for external billing software to access CDR and call recordings on the PBX. The API uses HTTPS to request the CDR data and call recording data matching given parameters as configured on the third-party application.

API Configuration Parameters

Before accessing the API, the administrators need enable API and configure the access/authentication information on the UCM6100 first under **Value-added Features→API Configuration**. The API configuration parameters are listed in the table below.

CDR HTTP API Settings				
Basic Settings				
Enable	Enable/Disable API. The default setting is disabled.			
TLS Bind Address	Configure the IP address for TLS server to bind to. "0.0.0.0" means binding to all interfaces. The port number is optional, and the default port number is 8443. The IP address must match the common name (host name) in the certificate so that the TLS socket won't bind to multiple IP addresses. The default setting is 0.0.0.8443.			
User Name	Configure the user name for TLS authentication. If not configured, authentication will be skipped.			
Password	Configure the password for TLS authentication. This is optional.			
	Specify a list of IP addresses permitted by CDR and REC API. This creates an API- specific access control list. Multiple entries are allowed.			
Permitted IP(s)	For example, "192.168.40.3/255.255.255.255" denies access from all IP addresses except 192.168.40.3.			
	The default setting is blank, meaning all IP addresses will be denied.			
Other Settings				
TLS Private Key	Upload TLS private key. The size of the key file must be under 2MB. This file will be renamed as 'private.pem' automatically.			

Table 106: API Configuration Parameters

TLS Cert	Upload TLS cert. The size of the certificate must be under 2MB. This is the certificate file (*.pem format only) for TLS connection. This file will be renamed as "certificate.pem" automatically. It contains private key for the client and signed certificate for the server.				
CDR Real-time Out	put Settings				
Enable	Enables real-time CDR output module. This module connects to selected IP addresses and ports and posts CDR strings as soon as it is available.				
Server Address	CDR server IP address				
Port	CDR server IP port				
Upload Prompts User Configuration					
User Name	User name used to upload prompts.				
Password	Password used to upload prompts.				

Upload Voice Prompt via API

Customers now can use the "Upload Prompts User Configuration" to upload/replace voice prompt files as an alternative method to the manual upload method on UCM PBX Settings> Voice Prompt> Custom Prompt.

The workflow of the prompt file upload goes as:

An HTTP/HTTPS request is sent to the UCM to upload/replace a voice prompt file, the request should include authentication details to the UCM and the name of the file to be uploaded. Then the UCM will contact an FTP server that should be hosted on the same IP address of the HTTP/HTTPS requester and download the prompt file from the FTP server.

The steps and conditions to upload the voice prompt via API are listed below:

 Configure the prompt User under value-added Features -> API Configuration -> Upload Prompts User Configuration. By default, the username and password for voice prompt user are "User Name: uploader; Password: uploader123".

Menus		•≡_	API Configuration		
<i>(1</i>) S		~	CDR HTTP API Settings	CDR Real-time Output Settings	Upload Prompts User Configuration

	API Configuration				
	AMI				

Figure 220: Upload Prompt User Configuration

- 2. Hash the password of the user configured to an MD5 Encryption format.
- 3. Set the permission on the FTP server to Anonymous on the local computer hosting the FTP server and make sure that the default FTP port 21 is used.
- 4. Send an HTTP/HTTPS command to trigger the Prompt file upload on the UCM. If UCM's HTTP server is set to HTTPS, the example of the request sent to the UCM is:

https://192.168.124.89:8089/cgi?action=uploadprompt&username=uploader&password=9191a6394c2 1b3aabd779213c7179462&filename=test.mp3

If UCM's HTTP server is set to HTTP, the example of the request sent to the UCM is:

http://192.168.124.89:8089/cgi?action=uploadprompt&username=uploader&password=9191a6394c21 b3aabd779213c7179462&filename=test.mp3

<u>Note</u>: If the File name on the HTTP/HTTPS request exists already on the UCM's Custom voice prompts list the existing file will be overwritten by the new file downloaded from the FTP server.

For more details on CDR API (Access to Call Detail Records) and REC API (Access to Call Recording Files), please refer the document in the link here:

http://www.grandstream.com/sites/default/files/Resources/ucm6xxx_cdr_rec_api_guide.pdf

CTI SERVER

UCM does support CTI server capabilities which are designed to be a part of the CTI solution suite provided by Grandstream, including GXP21XX and GXP17XX enterprise IP phones along with GS Affinity app.

Mainly the UCM will by default listening on port TCP 8888 for the connections from GS affinity application in order to interact, modify and serve data requests by the application which includes setting call features for the connected extension as call forward and DND.

Users can change the listening port under the menu page, Web GUI→Value-added Features→CTI Server as shown on below screenshot:

CTI Server		Save
* Port:	8888	

Figure 221: CTI Server Listening port

More information about GS affinity and CTI Support on Grandstream products series please refer to the following link: <u>http://www.grandstream.com/sites/default/files/Resources/GS_Affinity_Guide.pdf</u>

ASTERISK MANAGER INTERFACE (RESTRICTED ACCESS)

The UCM6100 supports Asterisk Manager Interface (AMI) with restricted access. AMI allows a client program to connect to an Asterisk instance commands or read events over a TCP/IP stream. It's particularly useful when the system admin tries to track the state of a telephony client inside Asterisk.

User could configure AMI parameters on UCM6100 Web GUI→**Value-added Features**→**AMI**. For details on how to use AMI on UCM6100, please refer to the following AMI guide:

http://www.grandstream.com/sites/default/files/Resources/UCM_series_AMI_guide.pdf

Marning:

Please do not enable AMI on the UCM6100 if it is placed on a public or untrusted network unless you have taken steps to protect the device from unauthorized access. It is crucial to understand that AMI access can allow AMI user to originate calls and the data exchanged via AMI is often very sensitive and private for your UCM6100 system. Please be cautious when enabling AMI access on the UCM6100 and restrict the permission granted to the AMI user. By using AMI on UCM6100 you agree you understand and acknowledge the risks associated with this.

CRM INTEGRATION

Customer relationship management (**CRM**) is a term that refers to practices, strategies and technologies that companies use to manage and analyze customer interactions and data throughout the customer lifecycle, with the goal of improving business relationships with customers.

The UCM6100 support the following CRM API: SugarCRM, vTigerCRM, ZohoCRM and Salesforce CRM, which allows users to look for contact information in the Contacts, Leads and / or Accounts tables, shows the contact record in CRM page, and saves the call information in the contact's history.

SugarCRM

Configuration page of the SugarCRM can be accessed via admin login, on the UCM webGUI \rightarrow Value-added Features \rightarrow CRM.

CRM						
	CRM System :	SugarCRM	~			
	* CRM Server Addre	http://192.168.5.108:81/sugarcrm				
	* Add Unknown Nu	Leads	~	-

		Look up in Contacts table			Look up in Leads table	
				<	Look up in Accounts table	

Figure 222: SugarCRM Basic Settings

1. Select "SugarCRM" from the CRM System Dropdown in order to use SugarCRM.

CRM System	Select a CRM system from the dropdown menu, four CRM systems are available: SugarCRM, vTigerCRM, ZohoCRM and Salesforce.
CRM Server Address	Enter the IP address of the CRM server.
Add Unknown Number	Add the new number to this module if it can't be found in the selected module.

Table 107: SugarCRM Settings

Contact Lookups	Select from the "Available" list of lookups and press 📀 🔇 to
	select where the UCM can perform the lookups on the CRM tables, Leads, Accounts, and Contacts.

Once settings on admin access are configured:

- 2. Click on Save and Apply Changes
- 3. Logout from admin access.
- 4. Login to the UCM as user and navigate under "User Portal→Value-added Feature→CRM User Settings".

Click on "Enable CRM" and enter the username/password associated with the CRM account then click on

save and Apply Changes. The status will change from "Logged Out" to "Logged In". User can start then using

SugarCRM features.

CRM User Settings

PMS INTEGRATION

UCM6100 supports Hotel Property Management System PMS, including check-in/check-out services, wakeup calls, room status, Do Not Disturb which provide an ease of management for hotel applications. This feature can be found on Web GUI \rightarrow Value-added Features \rightarrow PMS.

Note: The PMS integration on UCM is currently supported only with one of the three following solutions.

The PMS module built-in the UCM supports the following features based on each solution:

Feature	Mitel	HMobile	HSC
Check-In	\checkmark	\checkmark	X
Check-out	\checkmark	\checkmark	X
Wake-up Call	\checkmark	\checkmark	X
Name Change	\checkmark	X	\checkmark
Update	X	\checkmark	X
Set Credit	\checkmark	X	×
Set Station Restriction	\checkmark	X	\checkmark
Room Status	×	\checkmark	×
Room Move	X	\checkmark	X
Do Not Disturb	X	\checkmark	\checkmark
Mini Bar	X	\checkmark	X
MSG	X	\checkmark	X
MWI	X	X	\checkmark
Unconditional Call Forward	X	X	\checkmark

Table 111: PMS Supported Features

HMobile PMS Connector

In this mode, the system can be divided into three parts:

- PMS (Property Management System)
- PMSI (Property Management System Interface)
- PBX

Grandstream UCM6XXX series have integrated HMobile Connect PMSI which supports a large variety of PMS software providing following hospitality features: Check-in, Check-out, set Room Status, Wake-up call and more.

The following figure illustrates the communication flow between the PBX (Grandstream UCM6xxx Series) and PMS software, which is done through a middleware system (HMobile Connect) acting as interface between both parties.

Figure 230: UCM & PMS interaction

HSC PMS

In this mode, the system can be divided into two parts:

- PMS (Property Management System)
- PBX

Grandstream UCM6XXX series have integrated HSC PMS providing following features:

- Changing Display Name
- Set Station Restriction
- Call forwarding
- DND
- Name Change
- MWI

The following figure illustrates the communication flow between the PBX (Grandstream UCM6xxx Series) and PMS software (HSC). The communication between both parties is direct with no middleware.

Figure 231: UCM & HSC PMS interaction

Mitel PMS

In this mode, the system can be divided into two parts:

- PMS (Property Management System)
- PBX

Grandstream UCM6XXX series have integrated Mitel PMS providing following hospitality features: Check-in, Check-out, set Room Status, Wake-up call and more.

The following figure illustrates the communication flow between the PBX (Grandstream UCM6xxx Series) and PMS software (Mitel). The communication between both parties is direct with no middleware.

Figure 232: UCM & Mitel PMS interaction

Connecting to PMS

On the UCM WebGUI→Value-added Features→PMS→Basic Settings" set the connection information for the PMS platform.

Table 112: PMS Basic Settings				
Field	Description			
PMS Module	Users can select the desired PMS module from the drop-down list. Hmobile. Mitel. HSC.			
Wake Up Prompt	Prompt used when answering the wakeup calls it can be customized from " PBX Settings → Voice Prompt → Custom Prompt .			
PMS URL	Enter the PMS system URL			
UCM Port	Enter the Port used by the PMS system			
Username	Enter the Username to connect to the PMS system			
Password	Enter the password to connect to the PMS system			

In order to use some PMS features please activate the feature code associated under "Call Features -> Feature Codes"

- Update PMS Room Status
- PMS Wake Up Service

PMS Features

Room Status

User can create Rooms by clicking on

+ Create New Room

the following Figure will be displayed then.

Create New Room	
* Address :	1000
* Room Number:	1000
* Extension:	1000 "John DOE" ~
Guest Account:	
Guest Category Cod	
Guest Credit Money	
Maid Code:	
Arrival Date :	
Departure Date :	

Figure 233: Create New Room

Click "Save" to create the new room, the fields above can be configured from the PMS platform, once set the following screen will be shown:

PMS									Save	Cancel
Basic	c Settings	Room Status	Wa	keup Service	Mini I	Bar				
+	Create New Room	<u> </u> Delete Se		+ Batch Add	Rooms					
	Address \$	Room Number	Extension \$	Room Status \$	User Nam e	Guest Accou nt	Guest Category Co de	Guest Credit Mon ey	Maid Cod e	Options
	1000	1000	1000	Check-out	John DOE					
	1001	1001	1001	Check-out						

Figure 234: Room Status

User can create a batch of rooms as well by clicking on + Batch Add Rooms, the following window will pop up:

Batch Add Rooms	
* Start Address Num	100
* Start Room Numb	351
* Start Extension :	1005 ~
* Create Number:	8

Figure 235: Add batch rooms

Wake Up Service

In order to create a New Wake up service, user can click on + Create New Wakeup Service, the following window will pop up:

Create New Wakeup S	ervice	
* Room Number:	1000	~
* Date :	2017-05-05	
* Time :	09:15 🕒	
* Action Status:	Programmed	~
Type :	Single	~

Figure 236: Create New Wake Up Service

Table 113: PMS Wake up Service

Field	Description		
Room Number	Select the room number where to call with a limitation of 63 character.		
Time	Set the time of the wakeup call		
Action Status	Show the status of the call:		
	<u>Programmed</u> : the call is scheduled for the time set		
	<u>Cancelled</u> : the call is canceled		
	<u>Executed</u> : the wakeup call is made		
	Note: Editing an already executed wakeup service will automatically change		
	the service's status to "Programmed".		
Туре	• <u>Single</u> : The call will be made once on the specific time.		
	Daily: The call will be repeated every day on the specific time		

Once the call is made on the time specified, the following figure show the status of the wakeup call.

Name \$	Extension 🖨	Status	Action Status 💠	Answer Status ≑	Date	Time	Options
John	1000	Enabled	Executed	Answered	2017-05-04	05:18	C 🗖

Figure 237: Wakeup Call executed

This call has been executed but has been rejected, that why we can see the "Busy" status.

Mini Bar

In order to create a new mini bar, click on Features→PMS→Mini Bar, the following window will pop up:

Create New Mini Bar		
* Code :	4000	
* Name :	MiniBar	
* Prompt:	MiniBar_Success.gsm ×	Prompt
Skip Maid and Passw.		
Enable Continuous M	L	

Figure 238: Create New Mini Bar

Table 114: Create New Mini Bar

Code	Enter a non-existing extension number to be dialed when using the mini bar feature.
Name	Enter a name for the mini bar.
Prompt	Select the Prompt to play once connected to the mini bar.
Skip Maid and Password Authentication	If enabled, the default maid code will be 0000, no authentication is required. (Enter 0000 followed by # to access the consumer goods)
Enable Continuous Multi Goods Billing	If enabled, please separate the goods' codes by*.

In order to create a new maid, click on + Create New Maid under UCM webGUI→Value-added Features→PMS→Mini Bar, the following window will popup.

Create New Maid	
* Maid Code:	1100
* Secret:	123456

Figure 239: Create New Maid

Table 115: Create New Maid

Maid Code	Enter the Code to use when the maid wants to use the Mini Bar.
Secret	Enter the password associated with the maid.

In order to create a new consumer goods, click on + Create New Consumer Goods under UCM webGUI -> Value-

added Features → PMS → Mini Bar, the following window will popup.

Create New Consumer Goods			
* Code:	1000		
* Name:	mineral_water		
* Success Prompt:	water_success.gsm ~	Prompt	
* Failure Prompt:	water_failure.gsm	Prompt	

Figure 240: Create New Consumer Goods

Code	Enter the Goods Code.
Name	Enter the Name of the Goods
Success Prompt	Select the success prompt when typing the code of the goods by the maid.
Failure Prompt	Select the failure prompt.

The Minibar page displays as:

PMS

WAKEUP SERVICE

The WakeUp service can be used to schedule a reminder or wake up calls to any valid destination. This service is available on the UCM6100 as a separated module.

There are three ways to set up Wakeup Service:

- Using admin login
- Using user portal
- Using feature code

on

WakeUp Service using Admin Login

- 1. Login to the UCM as admin.
- 2. WakeUp service can be found under Web GUI->Value-added Features->Wakeup Service, click

+	Create New Wakeup Service	to create a new wake	eup se	rvice. The f	ollowing wi	ndow will pop up.
	Create New Wakeup	Service				
	Enable Wakeup Service :					
	* Name :	GS_Wakeup]		
	Prompt:	wakeup-call	~	Prompt		
	Custom Date:					
	* Date:	2017-08-11]		
	* Time:	14:00	9]		
	Members:	3 items Available Search Q 1002 1003 1004 1004	<	2 items Search 1000 1001	Selected	

Figure 242: Create New Wakeup Service

3. Fill out the required fields and select the members to add to the wakeup group.

Table 116: Wakeup Service

Enable Wakeup Service	Enable Wakeup service.	
Name	Enter a name (up to 64 character) to identify the wakeup service.	
Prompt	Select the prompt to play for that extension.	
Custom Date	If disabled, users can select a specific date and time. If enabled users can select multiple days of the week to perform the wakeup.	
Date	Select the date or dates when to performs the wakeup call.	
Time	Select the time when to play the wakeup call.	
Members	Select the members involved within the wakeup service group.	

4. Click Save and Apply Changes to apply the changes.

A wakeup service entry is created. The UCM will send a wakeup call to every extension in the member list at the scheduled date and time.

Note: the wakeup service has the following limitation on how many members can be added depending on UCM model.

UCM Model	Max members in a Wakeup Service				
UCM6102	30				
UCM6102	50				
UCM6104	30				
UCM6104	50				
UCM6108 and UCM6116	50				
UCM6108	100				
UCM6510	100				

Table 117: Max Wakeup Members

WakeUp Service from User Portal

- 1. Login to the user portal on the UCM6100.
- 2. WakeUp service can be found under "Value-added Features→Wakeup Service", click on
 + Create New Wakeup Service

to create a new wakeup service.

- 3. Configures the Name, Prompt, Date and Time for the user to make the wakeup to.
- 4. Click Save and Apply Changes to apply the changes.

WakeUp Service using Feature Code

- 1. Login to the UCM as admin.
- 2. Enable "Wakeup Service" from the WebGUI under "Call Features → Feature Codes".

* Listen Spy:	*54	* Whisper Spy: *55
* Barge Spy:	*56	* Wakeup Service : *36 🗸
* PMS Wakeup Ser	-vi *35	* Update PMS Room *23
* Presence Status:	*48	
3. Click	Save and Apply Changes to apply the o	changes.

4. Dial "*36" which is the feature code by default to access to the UCM wakeup service to add, update, activate or deactivate UCM wakeup service.

ANNOUNCEMENTS CENTER

The UCM6100 supports Announcements Center feature which allows users to pre-record and store voice message into UCM6100 with a specified code. The users can also create group with specified extensions. When the code and the group number are dialed together in the combination of **code + group number**, the specified voice message is sent to all group members and only extensions in the group will hear the voice message.

Announcements Center Settings

	Table Tro. Amouncements Center Settings
Name	Configure a name for the newly created Announcements Center to identify this announcement center.
Code	Enter a code number for the custom prompt. This code will be used in combination with the group number. For example, if the code is 55, and group number is 666. The user can dial 55666 to send prompt 55 to all members in group 666. Note: The combination number must not conflict with any number in the system such as extension number or conference number.
Custom Prompt	This option is to set a custom prompt as an announcement to notify group members. The file can be uploaded from page 'Custom Prompt'. Click 'Prompt' to add additional record.
Ring Timeout	Configure the ring timeout for the group members. The default value is 30 seconds.

Table 118: Announcements Center Settings

Group Settings

Table 119: Group Settings

Name	Configure a name for the newly created group to identify the group.
Number	Configure the group number. The group number is used in combination with the code. For example, if group number is 666, and code is 55. The user can dial 55666 to send prompt 55 to all members in group 666. Note: The combination number must not conflict with any number in the system such as extension number or conference number.

Announcements Center feature can be found under Web GUI→Value-added Features→Announcements Center. The following example demonstrates the usage of this feature.

- 1. Click + Create New Group to create new group.
- 2. Give a name to the newly created group.
- 3. Create a group number which is used with code to send voice message.
- 4. Select the extensions to be included in the group, who will receive the voice message.

Create New Group					
* Name:	Test				
* Number:	666				
Members:	1 Search 1005 "Fax Extension"	Available Q	<	3 Search 1000 "John DOE" 1001 1002	Selected Q

Figure 244: Announcements Center Group Configuration

In this example, group "Test" has number 666. Extension 1000, 1001 and 1002 are in this group.

- + Create New Announcement Center
- 1. Click to create a new Announcement Center.
- 2. Give a name to the newly created Announcement Center.
- 3. Specify the code which will be used with group number to send the voice message to.
- 4. Select the message that will be used by the code from the Custom Prompt drop down menu. To create a new Prompt, please click "Prompt" link and follow the instructions in that page.

Create New Announc	ement Center	
* Name:	Test	
* Code:	55	
* Custom Prompt:	Test.gsm ×	Prompt
* Ring Timeout:	30	

Figure 245: Announcements Center Code Configuration

Code and Group number are used together to direct specified message to the target group. All extensions in the group will receive the message. For example, we can send code 55 to group 666 by dialing 55666 from any extension registered to the UCM6100. All the members in group 666 which are extension 1000, 1001 and 1002 will receive this voice message after they pick up the call.

FXS	12
FXO	12

Figure 250: UCM6104 Interfaces Status

Table 122: Interface Status Indicators

	FXS/FXO busy.
	FXS/FXO not configured.
\square	FXS/FXO disconnected.

System Status

The UCM6100 system status can be accessed via Web GUI→**Status**→**System Status**, which displays the following system information.

General

Under Web GUI \rightarrow System Status \rightarrow System Information \rightarrow General, users could check the hardware and software information for the UCM6100. Please see details in the following table.

System Status →Sy	System Status →System Information→General			
Model	Product model.			
Part Number	Product part number.			
System Time	Current system time. The current system time is also available on the upper right of each web page.			
Up Time	System up time since the last reboot.			
Boot	Boot version.			
Core	Core version.			
Base	Base version.			
Program	Program version. This is the main software release version.			
Recovery	Recovery version.			

Table 123: System Status→General

Network

Under Web GUI→**System Status**→**System Information**→**Network**, users could check the network information for the UCM6100. Please see details in the following table.

Table 124: System Status→Network

System Status→System Status→Network			
MAC Address	Global unique ID of device, in HEX format. The MAC address can be found on the label coming with original box and on the label located on the bottom of the device.		
IP Address	IP address.		
Gateway	Default gateway address.		
Subnet Mask	Subnet mask address.		
DNS Server	DNS Server address.		

Storage Usage

Users could access the storage usage information from Web GUI→System Status→Dashboard→Storage Usage. It shows the available and used space for Space Usage and Inode Usage.

Space Usage includes:

• Configuration partition

This partition contains PBX system configuration files and service configuration files.

• Data partition

Voicemail, recording files, IVR file, Music on Hold files etc.

- USB disk
 USB disk will display if connected.
- SD Card SD Card will display if connected.

Inode Usage includes:

- Configuration partition
- Data partition

Note:

Inode is the pointer used for file reference in the system. The system usually has limited resources of pointers

Figure 251: System Status→Storage Usage

Resource Usage

When configuring and managing the UCM6100, users could access resource usage information to estimate the current usage and allocate the resources accordingly. Under Web $GUI \rightarrow System$ Status $\rightarrow Dashboard \rightarrow Resource Usage$, the current CPU usage and Memory usage are shown in the pie chart.

Figure 252: System Status→Resource Usage

System Events

The UCM6100 can monitor important system events, log the alerts and send Email notifications to the system administrator.

Alert Events List

The system alert events list can be found under Web GUI \rightarrow **Maintenance** \rightarrow **System Events**. The following event are currently supported on the UCM6100 which will have alert and/or Email generated if occurred:

Disk Usage External Disk Usage Modify Admin Password Memory Usage System Reboot System Update System Crash Register SIP Failed Register SIP Trunk Failed **Restore Config** User Login Success User Login Failed SIP Internal Call Failure SIP Outgoing Call through Trunk Failure Fail2ban Blocking SIP Lost Registration SIP Peer Trunk Status Emergency Calls CDR database disk is malformed

Click on \square to configure the parameters for each event. See examples below.

1. Disk Usage

Alert Settings: Disk Us	age	
* Detect Cycle :	10	minute Y
* Alert Threshold :	80	%

Figure 253: System Events → Alert Events Lists: Disk Usage

- **Detect Cycle**: The UCM6100 will perform the internal disk usage detection based on this cycle. Users can enter the number and then select second(s)/minute(s)/hour(s)/day(s) to configure the cycle.
- Alert Threshold: If the detected value exceeds the threshold (in percentage), the UCM6100 system will send the alert.
- 2. External Disk Usage

- Alert Threshold: If the detected value exceeds the threshold (in percentage), the UCM6100 system will send the alert.

4. System Crash

Alert Settings: System	n Crash	
* Detect Cycle :	10	minute Y

Figure 256: System Events → Alert Events Lists: System Crash

• **Detect Cycle**: The UCM will detect the event at each cycle based on the specified time. Users can enter the number and then select second(s)/minute(s)/hour(s)/day(s) to configure the cycle.

Click on the switch OFF ON to turn on/off the alert and Email notification for the event. Users could also select the checkbox for each event and then click on button "Alert On", "Alert Off", "Email Notification Off" to control the alert and Email notification configuration.

Alert Log

Under Web GUI \rightarrow Maintenance \rightarrow System Events \rightarrow Alert Log, system messages from triggered system events are listed as alert logs. The following screenshot shows system crash alert logs.

System Events				
Alert Log	Alert Events List	Alert Contact		
Alert Log			T I	ilter
Delete Search R	lesult (s) 🗍 🗍 Delete All			
Time \$	Event Name	Type \$	Content	
2017-05-04 04:3	3:20 User login succe	ess Generate Alert	Logged in system successfully! The username is: adminIP:192.168.6.246	
2017-05-04 04:3	3:15 User login faile	d Generate Alert	Logged in system failed! The username is: adminIP:192.168.6.246	

Figure 257: System Events→Alert Log

User could also filter alert logs by selecting a certain event category, type of alert log, and/or specifying a certain

time period. The matching results will be displayed after clicking on Filter. Alert logs are classified into two types by the system:

- 1. **Generate Alert:** Generated when alert events happen, for example, alert logs for disk usage exceeding the alert threshold.
- 2. **Restore to Normal:** Generated when alert events being cleared, for example, logs for disk usage dropping back below the alert threshold.

User could filter out alert logs of "Generate Alert" or "Restore to Normal" by specifying the type according to need. The following figure shows an example of filtering out alert logs of type of "Restore to Normal".

Alert Log	Alert Events List	Alert Contact

Figure 258: Filter for Alert Log

Alert Contact

Users could add administrator's Email address under Web GUI**→Maintenance→System Events→Alert** Contact to send the alert notification to. Up to 10 Email addresses can be added.

CDR

CDR (Call Detail Record) is a data record generated by the PBX that contains attributes specific to a single instance of phone call handled by the PBX. It has several data fields to provide detailed description for the call, such as phone number of the calling party, phone number of the receiving party, start time, call duration, etc.

On the UCM6100, the CDR can be accessed under Web $GUI \rightarrow CDR \rightarrow CDR$. Users could filter the call report by specifying the date range and criteria, depending on how the users would like to include the logs to the report. Click on "Search" button to display the generated report.

Important Note: Starting from fw 1.0.15.16, the UCM has **CDR separation** and it will display only CDR for the current month. And in order to get older data, users need to apply filter by specifying the date range.

CDR								Filter Reset

Figure 259: CDR Filter

Table 125: CDR Filter Criteria

Call Type	Groups the following:
	• Inbound calls : Inbound calls are calls originated from a non-internal source (like a VoIP trunk) and sent to an internal extension.
	• Outbound calls : Outbound calls are calls sent to a non-internal source (like a VoIP trunk) from an internal extension.
	• Internal calls : Internal calls are calls from one internal extension to another extension, which are not sent over a trunk.
	• External calls : External calls are calls sent from one trunk to another trunk, which are not sent to any internal extension.
Status	 Filter with the call status, the available statuses are the following: Answered No Answer Busy Failed
Source Trunk Name	Select source trunk(s) and the CDR of calls going through inbound the trunk(s) will be filtered out.
Destination Trunk Name	Select destination trunk(s) and the CDR of calls going outbound through the trunk(s) will be filtered out.

Action Type	Filter calls using the Action Type, the following actions are available: Dial Announcements Callback Call Forward Conference Disa Fax Follow Me IVR Page Parked Call Queue Ring Group Transfer VFax VM VMG Wakeup Emergency Call Emergency Notify SCA
Account Code	Select the account Code to filter with. If pin group CDR is enabled, the call with pin group information will be displayed as part of the CDR under Account Code Field.
Start Time	Specify the start time to filter the CDR report. Click on the calendar icon on the right and the calendar will show for users to select the exact date and time.
End Time	Specify the end time to filter the CDR report. Click on the calendar icon on the right and the calendar will show for users to select the exact date and time.
Caller Number	 Enter the caller number to filter the CDR report. CDR with the matching caller number will be filtered out. User could specify a particular caller number or enter a pattern. '.' matches zero or more characters, only appears in the end. 'X' matches any digit from 0 to 9, case-insensitive, repeatable, only appears in the end. For example: 3XXX: It will filter out CDR that having caller number with leading digit 3 and of 4 digits' length. 3. It will filter out CDR that having caller number with leading digit 3 and of any length.
Caller Name	Enter the caller name to filter the CDR report. CDR with the matching caller name will be filtered out.

Callee Number Enter the callee number to filter the CDR report. CDR with the matching callee number will be filtered out.

The call report will display as the following figure shows.

Status ¢	Call from \$	Call to 🗘	Action Type 🗘	Start Time 🗘	Talk Time	Account Code ¢	Recording File Option s \$

Figure 260: Call Report

The CDR report has the following data fields:

- Start Time Format: 2016-09-03 00:06:16
- Call Type
 Example:
 IVR
 DIAL
 WAKEUP
- Call From
 Example format:
 "John Doe" 2000
- Call To
 Example format:
 2002
- Call Time Format: 0:00:02
- Talk Time Format: 0:00:00
- Account Code
 Example format:

Grandstream/Test

Status

Answered, Busy, No answer or Failed.

Users could perform the following operations on the call report.

• Sort by "Start Time"

Click on the header of the column to sort the report by "Start Time". Clicking on "Start Time" again will reverse the order.

Download Searched Results

Click on "Download Search Result(s)" to export the records filtered out to a .csv file.

Download All Records

Click on "Download All Records" to export all the records to a .csv file.

Delete All

Click on Delete All button to remove all the call report information.

Delete Search Result

On the bottom of the page, click on Delete Search Result (s) button to remove CDR records that appear on search results.

Note: When deleting CDR, a prompt will now appear asking whether to delete all recording files or not.

• Play/Download/Delete Recording File (per entry)

If the entry has audio recording file for the call, the three icons on the most right column will be activated for users to select. In the following picture, the second entry has audio recording file for the call.

Click on $^{(1)}$ to play the recording file; click on $^{(2)}$ to download the recording file in .wav format; click on

to delete the recording file (the call record entry will not be deleted).

Figure 261: Call Report Entry with Audio Recording File

Automatic Download CDR Records

User could configure the UCM6100 to automatically download the CDR records and send the records to multiple Email recipients in a specific hour. Click on "Automatic Download Settings", and configure the parameters in the dialog below.

Automatic Download			Save	Cancel
Automatically send the go to the Data Sync pa	_	il at a certain period. If you want to upload the CDR records to ar	1 FTP/TFTP server, ple	ease
Automatic Download :	v			
Delete Sent Records:				
Automatic Download Period :	By Day v 7	v		
Email:	admin@domain.local	Email Template		

Figure 262: Automatic Download Settings

To receive CDR record automatically from Email, check "Enable" and select a time period "By Day" "By Week" or "By Month", select Hour of the day as well for the automatic download period. Make sure you have entered an Email or multiple email addresses where to receive the CDR records.

Note: users have the option to delete the sent records "Delete Sent Records"

CDR Improvement

Starting from UCM6100 firmware 1.0.10.x, transferred call will no longer be displayed as a separate call entry in CDR. It will display within call record in the same entry. CDR new features can be found under Web $GUI \rightarrow CDR \rightarrow CDR$. The user can click on the option icon for a specific call log entry to view details about this entry, such as premier caller and transferred call information.

Figure 264: Detailed CDR Information

Downloaded CDR File

The downloaded CDR (.csv file) has different format from the Web GUI CDR. Here are some descriptions.

• Caller number, Callee number

"Caller number": the caller ID.

"Callee number": the callee ID.

If the "Source Channel" contains "DAHDI", this means the call is from FXO/PSTN line.

caller number	callee number	context	calerid	source channel	dest channel	lastapp
	2009	from-internal	"Wake Up Call" <wakeup></wakeup>	Local/2009@from-internal-00000001;2	PJSIP/2009-00000013	Dial
2007	31100	from-internal	"" <2007>	PJSIP/2007-00000014	DAHDI/1-1	Dial
2009	1100	from-internal	"John Doe" <2009>	PJSIP/2009-00000015	PJSIP/trunk_1-00000016	Dial
1100	2014	from-did-direct	"1100" <1100>	DAHDI/1-1	PJSIP/2014-00000017	Dial

Figure 265: Downloaded CDR File Sample

Context

There are different context values that might show up in the downloaded CDR file. The actual value can vary case by case. Here are some sample values and their descriptions.

from-internal: internal extension makes outbound calls.

ext-did-XXXXX: inbound calls. It starts with "ext-did", and "XXXXX" content varies case by case, which also relate to the order when the trunk is created.

ext-local: internal calls between local extensions.

• Source Channel, Dest Channel

Sample 1:

caller number	callee number	context	calerid	source channel	dest channel	disposition
2007	31100	from-internal	"" <2007>	PJSIP/2007-00000014	DAHDI/1-1	ANSWERED

Figure 266: Downloaded CDR File Sample - Source Channel and Dest Channel 1

DAHDI means it is an analog call, FXO or FXS.

For UCM6102, DAHDI/(1-2) are FXO ports, and DAHDI(3-4) are FXS ports.

For UCM6104, DAHDI/(1-4) are FXO ports, and DAHDI(5-6) are FXS ports.

For UCM6108, DAHDI/(1-8) are FXO ports, and DAHDI(9-10) are FXS ports.

Sample 2:

caller number	callee number	context	calerid	source channel	dest channel	lastapp
2009	1100	from-internal	"John Doe" <2009>	PJSIP/2009-00000015	PJSIP/trunk_1-00000016	Dial

Figure 267: Downloaded CDR File Sample - Source Channel and Dest Channel 2

"SIP" means it's a SIP call. There are three possible format:

(a) **PJSIP/NUM-XXXXXX**, where NUM is the local SIP extension number. The last XXXXX is a random string and can be ignored.

(c) **PJSIP/trunk_X/NUM**, where trunk_X is the internal trunk name, and NUM is the number to dial out through the trunk.

(c) **PJSIP/trunk_X-XXXXXX**, where trunk_X is the internal trunk name and it is an inbound call from this trunk. The last XXXXX is a random string and can be ignored.

There are some other possible values, but these values are almost the application name which are used by the dialplan.

IAX2/NUM-XXXXXXXX: it means this is an IAX call.

Local/@from-internal-XXXXX: it is used internally to do some special feature procedure. We can simply ignore it.

Hangup: the call is hung up from the dialplan. This indicates there are some errors or it has run into abnormal cases.

Playback: play some prompts to you, such as 183 response or run into an IVR.

ReadExten: collect numbers from user. It may occur when you input PIN codes or run into DISA

CDR Export Customization

Users can select the data they want to see in exported CDR reports by first clicking on the *Filter* button on the CDR page under **CDR** \rightarrow **CDR** and selecting the desired information in the *Export File Data* field.

Trunk Type	Select one of the following trunk type.
	• All
	SIP Calls
	PSTN Calls
Call Type	Select one or more in the following checkboxes.
	Inbound calls
	Outbound calls
	Internal calls
	External calls

	All calls
Time Range	• By month (of the selected year).
	• By week (of the selected year).
	• By day (of the specified month for the year).
	• By hour (of the specified date).
	• By range. For example, 2016-01 To 2016-03.

Recording Files

This page lists all the recording files recorded by "Auto Record" per extension/ring group/call queue/trunk, or via feature code "Audio Mix Record". If external storage device is plugged in, for example, SD card or USB drive, the files are stored on the external storage. Otherwise, internal storage will be used on the UCM6100.

Record	ing Files				
The reco	rding files are stored in U	JSB Disk . Do you want to chang	ge the location? This change will change	e the Conference, Queue and normal	l recordings.
		Delete All Recording Files	Batch Download Recording Files	Download All Recording Files	USB Disk v Recording Files v

Figure 270: CDR→Recording Files

- Click on "Delete Selected Recording Files" to delete the recording files.
- Click on "Delete All Recording Files" to delete all recording files.
- Click on "Batch Download Recording Files" in order to download the selected recording files.
- Click on "Download All Recording Files" to download all recordings files.
- Select Either "USB Disk" or "Local" to show recording files stored on external or internal storage, depending on selected storage space.
- Select whether to show call recordings, queue recordings or conference recordings.
- Click on ¹/₂ to download the recording file in .wav format.
- Click on ^{IIII} to delete the recording file.
- To sort the recording file, click on the title "Caller", "Callee" or "Call Time" for the corresponding column. Click on the title again can switch the sorting mode between ascending order or descending order.

USER PORTAL

Users could log into their web GUI portal using the extension number and user password. When an extension is created in the UCM61XX, the corresponding user account for the extension is automatically created. The user portal allows access to a variety of features which include user information, extension configuration and CDR as well as settings and managing value-added features like WebRTC, Fax Sending, Call Queue, Wakeup Service and CRM.

Users also can access their personal data files (call recordings, Fax files, Voicemail Prompts ...).

The login credentials are configured by Super Admin. The following figure shows the dialog of editing the account information by Super Admin. The User Name must be the extension number and it's not configurable, and the password is set on "User Password" field and it should not be confused with the SIP extension password.

Edit User Information: 1000

Figure 273: User Portal Layout

After successful login, the user has the following three configuration tabs:

Basic Information

Under this menu, the user can configure and change his/her personal information including (first name, last name, password, email address, department...). And they can also set and activate their extension features (presence status, call forward, DND) to be reflected on the UCM.

Also, the user can see from this menu the Call Details Records and search for specific ones along with the possibility to download the records on CSV format for later usage.

Personal Data

Under this section, the user can access and manage their personal data files which includes (voicemail files, call recordings, and fax files) along with the possibility to set Follow me feature to without requesting the Super admin to set the feature from admin account.

Value-added Features

On this section, the user has access to manage and use all rich value-added features which includes.

+ WebRTC connection and making calls from the browser.

- + Sending Fax files using PDF or TIF/TIFF format.
- + If user is a member of call queue, they can check the queue's activity from the "Call Queue" section.
- + Create and enable WakeUp service.
- + Enable and configure CRM connection to either SugarCRM or Salesforce.

For the configuration parameter information in each page, please refer to **[Table 127: User Management → Create New User]** for options in **User Portal → Basic Information → User Information** page; please refer to **[EXTENSIONS]** for options in **User Portal → Basic Information → Extension** page; please refer to **[CDR]** for **User Portal → Basic Information → CDR** page.

MAINTENANCE

User Management

User management is on Web GUI→Maintenance→User Management page. User could create multiple accounts for different administrators to log in the UCM6100 Web GUI. Additionally, the system will automatically create user accounts along with creating new extensions for extension users to log in the Web GUI using their extension number and password. All existing user accounts for Web GUI login will be displayed on User Management page as shown in the following figure.

John	Administrator		r 💼

Figure 276: User Management – New Users

Custom Privilege

Four privilege levels are supported:

• Super Administrator

- This is the highest privilege. Super Admin can access all pages on UCM6100 Web GUI, change configuration for all options and execute all the operations.
- Super Admin can create, edit and delete one or more users with "Admin" privilege
- Super Admin can edit and delete one or more users with "Consumer" privilege
- Super Admin can view operation logs generated by all users.

- By default, the user account "admin" is configured with "Super Admin" privilege and it's the only user with "Super Admin" privilege. The User Name and Privilege level cannot be changed or deleted.
- Super Admin could change its own login password on Web GUI→Maintenance→Change Information page.
- Super Admin could view operations done by all the users in Web GUI**→Maintenance→User** Management→Operation Log
- Administrator
 - Users with "Admin" privilege can only be created by "Super Admin" user.
 - "Admin" privilege users are not allowed to access the following pages:

Maintenance→Upgrade

Maintenance→Cleaner

Maintenance→Reset/Reboot

Settings→User Management→Operation Log

- "Admin" privilege users cannot create new users for login.

Note: By default, administrator accounts are not allowed to access backup menu, but this can be assigned

to them by editing the option "Maintenance \rightarrow User Management \rightarrow Custom Privilege" then press	6
to edit the "Admin" account and include backup operation permission for these types of users.	

* Privilege Name :	Admin]	
Custom Privilege:	1 item Available		0 item	Selected
	Search Q		Search	Q
	Backup	<	None	

Figure 277: Assign Bakcup permoission to "Admin" users

- Consumer
 - A user account for Web GUI login is created automatically by the system when a new extension is created.
 - The user could log in the Web GUI with the extension number and password to access user information,

extension configuration and CDR of that extension.

- The SuperAdmin user can click on \square on the "General_User" in order to enable/disable the custom privilege from deleting their own recording files, changing SIP credentials and disabling voicemail service in their user portal account.

Edit Custom Privilege: General_U	ser
* Privilege Name: Genera	L_User
Enable Delete Recording 🗌 Files:	
Allowed to change Auth ID	
Allow to Enable Voicemail: 🗌	

• Custom Privilege

The Super Admin user can create users with different privileges. 6 modules are available for privilege customization.

- System Status
- Conference
- System Events
- CDR Records
- CDR API
- Wakeup Service
- Extensions
- IVR
- Voicemail
- Ring Groups
- Paging/Intercom
- Call Queue
- Pickup Groups
- Speed Dial
- DISA
- Event List
- Call back
- Feature Codes

- Fax/T.38
- Parking Lot
- Backup
- Dial by Name
- Emergency Calls

Selected Modules

Figure 279: Create New Custom Privilege

Log in UCM6100 as super admin and go to **Maintenance** \rightarrow **User Management** \rightarrow **Custom Privilege**, create privilege with customized available modules.

To assign custom privilege to a sub-admin, navigate to UCM Web GUI→Maintenance→User Management→User Information→Create New User/Edit Users, select the custom privilege from "Privilege" option.

Concurrent Multi-User Login

When there are multiple Web GUI users created, concurrent multi-user login is supported on the UCM6100. Multiple users could edit options and have configurations take effect simultaneously. However, if different users are editing the same option or making the same operation (by clicking on "Apply Changes"), a prompt will pop up as shown in the following figure.

Figure 280: Multiple User Operation Error Prompt

Change Password

After logging in the UCM6100 Web GUI for the first time, it is highly recommended for users to change the default password "admin" to a more complicated password for security purpose. Follow the steps below to change the Web GUI access password.

- 1. Go to Web GUI→Maintenance→Change Information page.
- 2. Enter the old password first.
- 3. Enter the new password and re-type the new password to confirm. The new password has to be at least 4 characters. The maximum length of the password is 30 characters.
- 4. Configure the Email Address that is used when login credential is lost.
- 5. Click on "Save" and the user will be automatically logged out.
- 6. Once the web page comes back to the login page again, enter the username "admin" and the new password to login.

Figure 281 : Change Password

Enter Old Password	Enter the Old Password for UCM6100
Enter New Password	Enter the New Password for UCM6100
Retype New Password	Retype the New Password for UCM6100

Change binding Email

UCM6100 allows user to configure binding email in case login password is lost. UCM6100 login credential will be sent to the designated email address. The feature can be found under Web GUI \rightarrow System Settings \rightarrow User Management \rightarrow Change Binding Email.

Change Binding Email

TUDIO		onunge	Dinaing	Linan	option

Enter the password of the account	Enter the current login user credential for UCM6100
Email Address	Email Address is used to retrieve password when password is lost

Login Settings

After the user logs in the UCM6100 Web GUI, the user will be automatically logged out after certain timeout, or he/she can be banned for a specific period if the login timeout is exceeded. Those values can be specified under UCM6100 web GUI \rightarrow Maintenance \rightarrow Change Information \rightarrow Login Settings page.

The "**User Login Timeout**" value is in minute and the default setting is 10 minutes. If the user doesn't make any operation on Web GUI within the timeout, the user will be logged out automatically. After that, the Web GUI will be redirected to the login page and the user will need to enter username and password to log in. If set to 0, there is no timeout for the Web GUI login session and the user will not be automatically logged out.

"**Maximum number of login attempts**" can prevent the UCM6100 from brutal force decryption, if this number is exceeded user IP address will be banned from accessing the UCM for a period of time based on user configuration, the default value is 5.

"**User ban period**" specify the period of time in minutes an IP will be banned from accessing the UCM if the User max number of try login is exceeded, the default value is 5.

"Login Banned User List" show the list of IPs' banned from the UCM.

"Login White List" User can add a list of IPs' to avoid the above restriction, thus, they can exceed the User max number of try login.

	No Data	

Operation Log

Super Admin has the authority to view operation logs on UCM6100 Web GUI→Settings→User Management→Operation Log page. Operation logs list operations done by all the Web GUI users, for example, Web GUI login, creating trunk, creating outbound rule and etc. There are 7 columns to record the operation details "Date", "User Name", "IP Address", "Results", "Page Operation", "Specific Operation" and "Remark".

🗊 Delete Sear	ch Result (s)	Delete All Log	js

The above figure shows an example that operations made by user "support" on device with IP 192.168.40.173 from 2014-11-01 00:00 to 2014-11-06 15:38 are filtered out and displayed.

Upgrading

The UCM6100 can be upgraded to a new firmware version remotely or locally. This section describes how to upgrade your UCM6100 via network or local upload.

Upgrading Via Network

The UCM6100 can be upgraded via TFTP/HTTP/HTTPS by configuring the URL/IP Address for the TFTP/HTTP/HTTPS server and selecting a download method. Configure a valid URL for TFTP, HTTP or HTTPS; the server name can be FQDN or IP address.

Examples of valid URLs:

firmware.grandstream.com/BETA

The upgrading configuration can be accessed via Web GUI**→Maintenance→Upgrade**.

Upgrade Firmware					
Upgrade Via::	HTTP ~				
Firmware Server Pa	fw.ipvideotalk.com/gs				
Firmware File Prefi					
Firmware File Suffi					
HTTP/HTTPS User					
HTTP/HTTPS Passw.					

Figure 286: Network Upgrade

Table 130: Network Upgrade Configuration

Upgrade Via	Allow users to choose the firmware upgrade method: TFTP, HTTP or HTTPS.
Firmware Server Path	Define the server path for the firmware server.
Firmware File Prefix	If configured, only the firmware with the matching encrypted prefix will be downloaded and flashed into the UCM6100.
Firmware File Suffix	If configured, only the firmware with the matching encrypted postfix will be downloaded and flashed into the UCM6100.
HTTP/HTTPS User Name	The user name for the HTTP/HTTPS server.
HTTP/HTTPS Password	The password for the HTTP/HTTPS server.

Please follow the steps below to upgrade the firmware remotely.

- 1. Enter the firmware server path under Web GUI \rightarrow Maintenance \rightarrow Upgrade.
- 2. Click on "Save". Then reboot the device to start the upgrading process.
- 3. Please be patient during upgrading process. Once done, a reboot message will be displayed in the LCD.
- 4. Manually reboot the UCM6100 when it's appropriate to avoid immediate service interruption. After it boots up, log in the Web GUI to check the firmware version.

Upgrading Via Local Upload

If there is no HTTP/TFTP server, users could also upload the firmware to the UCM6100 directly via Web GUI. Please follow the steps below to upload firmware locally.

- 1. Download the latest UCM6100 firmware file from the following link and save it in your PC. http://www.grandstream.com/support/firmware
- 2. Log in the Web GUI as administrator in the PC.
- 3. Go to Web GUI→Maintenance→Upgrade, upload the firmware file by clicking on "choose file to upload" and select the firmware file from your PC. The default firmware file name is ucm6100fw.bin

Firmware File Path	Choose file to upload

Figure 289: Reboot UCM6100

5. Click on "OK" to reboot the UCM6100 and check the firmware version after it boots up.

▲ Notes:

- Please do not interrupt or power cycle the UCM6100 during upgrading process.
- The firmware file name allows the use of the special characters besides the following restricted characters: # \$ ^ & * + () [] / ; ' | , < > ?

No Local Firmware Servers

Service providers should maintain their own firmware upgrade servers. For users who do not have TFTP/HTTP/HTTPS server, some free windows version TFTP servers are available for download from http://www.solarwinds.com/products/freetools/freetftp_server.aspx http://tftpd32.jounin.net

Please check our website at <u>http://www.grandstream.com/support/firmware</u> for latest firmware.

Instructions for local firmware upgrade via TFTP:

- 1. Unzip the firmware files and put all of them in the root directory of the TFTP server;
- 2. Connect the PC running the TFTP server and the UCM6100 to the same LAN segment;

- 3. Launch the TFTP server and go to the File menu→Configure→Security to change the TFTP server's default setting from "Receive Only" to "Transmit Only" for the firmware upgrade;
- 4. Start the TFTP server and configure the TFTP server in the UCM6100 web configuration interface;
- 5. Configure the Firmware Server Path to the IP address of the PC;
- 6. Update the changes and reboot the UCM6100.

End users can also choose to download a free HTTP server from <u>http://httpd.apache.org/</u> or use Microsoft IIS web server.

Backup

The UCM6100 configuration can be backed up locally or via network. The backup file will be used to restore the configuration on UCM6100 when necessary.

Backup/Restore

Users could backup the UCM6100 configurations for restore purpose under Web $GUI \rightarrow Maintenance \rightarrow Backup \rightarrow Backup/Restore$.

Click on to create a new backup file. Then the following dialog will show.

Create New Backup	Backup	
Choose Backup Files:	Config File 🗌 CDR Records	
	Recording Files Fax Files	
	Voice Mail	
	Voice Prompt Files	
	Queue Log	
	ZeroConfig Storage	
* Choose Storage Location	: Local v	
* File Name:	backup_2017908_095503	
Warning: Backing up o devices.	data may take a while and require large amounts of disk space. Please use an SD card, USB flash drive, or other external stora	je

Figure 290: Create New Backup

- 1. Choose the type(s) of files to be included in the backup.
- 2. Choose where to store the backup file: USB Disk, SD Card or Local.
- 3. Name the backup file.
- 4. Click on "Backup" to start backup.

Once the backup is done, the list of the backups will be displayed with date and time in the web page. Users can

download 📥, restore 🕙, or delete 🔲 it from the UCM6100 internal storage or the external device.

Click on Upload Backup File to upload backup file from the local device to UCM6100. The uploaded backup file will also be displayed in the web page and can be used to restore the UCM6100.

It is also possible to load backup files from UCM6100 to UCM6100 and vice versa.

Please make sure the FXO port settings, total number of extensions and total number of conference rooms are compactable before restoring to another UCM model. Otherwise it will prompt a warning and stop the restore process as shown below:

Data Sync

Besides local backup, users could backup the voice records/voice mails/CDR/FAX in a daily basis to a remote server via SFTP protocol automatically under Web GUI→**Maintenance**→**Backup**→**Data Sync**.

The client account supports special characters such as @ or "." Allowing the use email address as SFTP accounts. It allows users as well to specify the destination directory on SFTP server for backup file. If the directory doesn't exist on the destination, UCM6100 will create the directory automatically

Figure 294: Data Sync

Table 131: Data Sync Configuration

Enable Data Sync	Enable the auto data sync function. The default setting is "No".		
Account	Enter the Account name on the SFTP backup server.		
Password	Enter the Password associate with the Account on the SFTP backup server.		
Server Address	Enter the SFTP server address.		
Destination Directory	Specify the directory in SFTP server to keep the backup file. Format: 'xxx/xxx/xxx', If this directory does not exist, UCM will create this directory automatically.		
Sync Time	Enter 0-23 to specify the backup hour of the day.		

Before saving the configuration, users could click on + Test Connection. The UCM6100 will then try connecting the server to make sure the server is up and accessible for the UCM6100. Save the changes and all the backup logs will be listed on the web page. After data sync is configured, users could also manually synchronize all data

by clicking on + Synchronize All Data instead of waiting for the backup time interval to come.

Restore Configuration from Backup File

To restore the configuration on the UCM6100 from a backup file, users could go to Web $GUI \rightarrow Maintenance \rightarrow Backup \rightarrow Backup/Restore$.

- A list of previous configuration backups is displayed on the web page. Users could click on 49 of the desired backup file and it will be restored to the UCM6100.
- If users have other backup files on PC to restore on the UCM6100, click on "Upload Backup File" first and select it from local PC to upload on the UCM6100. Once the uploading is done, this backup file will be

displayed in the list of previous configuration backups for restore purpose. Click on $\overset{(1)}{\longrightarrow}$ to restore from the backup file.

Directory	Select the directory user want to clean.
Delete Selected File	Select multiple entries to delete from USB or SD card.

System Recovery

In some cases (for example after wrong upgrading procedure where the user doesn't follow the correct steps to perform an upgrade) the system may go into some hardware/software issues where the web UI access is lost as well as SSH, in this case the only solution would be to perform a full system recovery in order to reset or update the software version of the device in order to use it again.

- 1. To access recovery mode on UCM, please follow below steps:
- 2. Remove the power from the unit and keep the network cable connected.
- 3. Press using a PIN the reset button and keep holding.
- 4. Plug back the power supply while maintaining the reset button pressed.
- 5. Wait for couple of seconds until you hear a click sound.

GRANDSTREAM

6. Release the reset button, and the system should display on the LCD a message "Recovery Mode" along with an IP address.

Once at this stage, the administrator can access the recovery mode web portal by typing in either the IP0 address (typically WAN) or IP1 address (typically LAN) into a browser address bar. The following page should appear:

Recover	
Username Password	
Login	

Figure 299: UCM6102 Recovery Web Page

Make sure to enter the correct admin password, and press login to access the recovery mode page :

Factory Reset :		Reset
Reboot :		Reboot

Figure 300: Recovery Mode

From here, the user can either upload a firmware file, factory reset or just reboot the device.

Syslog

On the UCM6100, users could dump the syslog information to a remote server under Web $GUI \rightarrow Maintenance \rightarrow Syslog$. Enter the syslog server hostname or IP address and select the module/level for the syslog information.

The default syslog level for all modules is "error", which is recommended in your UCM6100 settings because it can be helpful to locate the issues when errors happen.

Some typical modules for UCM6100 functions are as follows and users can turn on "notice" and "verb" levels besides "error" level.

- **pbx**: This module is related to general PBX functions.
- **chan_sip**: This module is related to SIP calls.
- chan_dahdi: This module is related to analog calls (FXO/FXS).
- **app_meetme**: This module is related to conference room.

▲ Note:

Syslog is usually for debugging and troubleshooting purpose. Turning on all levels for all syslog modules is not recommended for daily usage. Too many syslog prints might cause traffic and affect system performance. The reserved size for Syslog entries on the cache memory of the UCM is 50M, once this sized is reached the UCM will clean up 2M of the oldest Syslog entries to allow to save new logs.

Network Troubleshooting

On the UCM6100, users could capture traces, ping remote host and traceroute remote host for troubleshooting purpose under Web GUI**→Maintenance→Network Troubleshooting**.

The following sections shows the steps to capture different types of traffic traces for analysis purposes.

Ethernet Capture

The captured trace can be downloaded for analysis. The instructions or result will be displayed in the Web GUI output result.

Network Troublesh	poting			
Ethernet Capture	IP Ping	Traceroute		
Interface Type :	WAN	~	Enable SFTP Data Sy	
Storage to Externa	I D		Capture Filter:	
	USB Disk			
Start	Stop Dov			
Output Result				

Figure 301: Ethernet Capture

	Table 134: Ethernet Capture
Interface Type	Select the network interface to monitor.
Enable SFTP Data Sync	Check this box to save the capture files in the SFTP server. Please make sure the configuration of data synchronization works before.
Storage to External Device	Check this box to activate storage of the capture either on the USB or SD Card.
Capture Filter	Enter the filter to obtain the specific types of traffic, such as (host, src, dst, net, proto).
Start	Click to start the trace.
Stop	Click to stop the trace.
Download	Click to download the trace if trace is stored locally.

The output result is in .pcap format. Therefore, users could specify the capture filter as used in general network traffic capture tool (host, src, dst, net, protocol, port, port range) before starting capturing the trace.

IP Ping

Enter the target host in host name or IP address. Then press "Start" button. The output result will dynamically display in the window below.

Network Troublesho	ooting	
Ethernet Capture	IP Ping	Traceroute
* Target Host:	192,168,6,1	
Start	Stop	
Output Result		
64 bytes from 192.	168.6.1: seq=14 ttl=	=64 time=0.403 ms

Figure 302: Ping

Traceroute

Enter the target host in host name or IP address. Then press "Start" button. The output result will dynamically display in the window below.

Traceroute
.656 ms 84.16.13.202 (84.16.13.202) 80.128 ms 213.140.36.246 (213.140.36.246) 90.769 ms .227 ms google-be5-gramadix1.net.telefonicaglobalsolutions.com (216.184.113.245) 80.285 ms 78.776 ms .910 ms 82.169 ms 81.449 ms 118 ms 209.85.252.139 (209.85.252.139) 85.433 ms 85.594 ms

Signaling Troubleshooting

Analog Record Trace

• Analog Record Trace

Analog record trace can be used to troubleshoot analog trunk issue, for example, the UCM6100 user has caller ID issue for incoming call from Analog trunk. Users can access analog record trance under Web

GUI→Maintenance→Signal Troubleshooting→Analog Record Trace.

Here is the step to capture trace:

- 1. Select FXO or FXS for "Record Ports". If the issue happens on FXO 1, select FXO port 1 to record the trace.
- 2. Select "Record Direction".
- 3. Select "Record File Mode" to separate the record per direction or mix.
- 4. Click on "Start".
- 5. Make a call via the analog port that has the issue.
- 6. Once done, click on "Stop".
- 7. Click on "Download" to download the analog record trace.

Output Result				
The file has been de	leted or does not exist.			

Figure 304: Troubleshooting Analog Trunks

• A key Dial-up FXO

Users can directly set a PSTN number on the "**External Extension**" text box to troubleshoot issues related to the analog trunk easily, the following steps shows how to use this feature:

1. Configure analog trunk on UCM, including outbound route.

- 2. Enter a reachable external number in "External Extension".
- 3. Press "Start" button. The call will be initiated to the external number.
- 4. Answer and finish the call before pressing "Stop" button.

The trace will be available for analysis to download after output result shows "Done! Click on Download to download the captured packets".

Figure 305: A Key Dial-up FXO

Note: When using a Key Dial-up FXO feature the outbound trunk for the analog trunk need to have internal permission. As well as it should be the trunk with the highest outbound route priority.

After capturing the trace, users can download it for basic analysis. Or you can contact Grandstream Technical support in the following link for further assistance if the issue is not resolved. <u>http://www.grandstream.com/index.php/support</u>

Service Check

Enable Service Check to periodically check UCM6100. Check Cycle is configurable in seconds and the default setting is 60 sec. Check Times is the maximum number of failed checks before restart the UCM6100. The default setting is 3. If there is no response from UCM6100 after 3 attempts (default) to check, current status will be stored and the internal service in UCM6100 will be restarted.

Service Check	
Enable Server Check :	✓
* Check Cycle:	60
* Check times:	3

EXPERIENCING THE UCM6100 SERIES IP PBX

Please visit our website: <u>http://www.grandstream.com</u> to receive the most up- to-date updates on firmware releases, additional features, FAQs, documentation and news on new products.

We encourage you to browse our <u>product related documentation</u>, <u>FAQs</u> and <u>User and Developer Forum</u> for answers to your general questions. If you have purchased our products through a Grandstream Certified Partner or Reseller, please contact them directly for immediate support.

Our technical support staff is trained and ready to answer all of your questions. Contact a technical support member or <u>submit a trouble ticket online</u> to receive in-depth support.

Thank you again for purchasing Grandstream UCM6100 series IP PBX appliance, it will be sure to bring convenience and color to both your business and personal life.
