

Section 19 – Saturn Monitor Follow & Preview

The Saturn **Monitor Follow** application allows you to map Saturn sources to monitor “banks” so that you can continuously preview any or all of the 16 sources assigned to the console (Figure 19–1). Some or all of the monitors in the bank can be mapped so they will display sources dynamically, as they are assigned to the Preset bus; there is also a provision for mapping up to four sources semi-permanently to any four monitors (outputs).

As an alternative to using multiple, dedicated monitors, there is also a **Monitor Preview** application that uses a GUI control panel to select any of the 16 sources assigned to the console for display on a single monitor. This allows the Saturn Preset bus to remain undisturbed while any of the sources assigned to the Preset bus are checked. See Figure 19–2.
