

Options

This menu is used to install new software options that upgrade the Kahuna mainframe, e.g. installing protocols, Extreme M/Es, or installing extra inputs and outputs, these are just a few examples of the many options available to the Kahuna.

Installing Options

Place a USB memory device with the option file/s into the USB port.

Touch the **{Select Device}** button and the USB device can be selected allowing the option file to be located. If there is more than one file on the USB device then use the **File** parameter control to select the required option file.

Touch **{Select}** to select the new option file, finally press **{Install}** and the option file will be installed into the mainframe.

Note: After installing a new option, the mainframe has to be re-booted.
