

With Release 1.3, the mc<sup>2</sup>66 allows to integrate either 19" units of 2 RU or the regular User Panel. Every desk upgraded to Release 1.3 can be modified at any time for integrating 19" units in the surface.

For preparing the integration of 19" units in the mc<sup>2</sup>66 surface you need to order the following components:

1. 960/53            19" integration kit
2. 960/32            Fader panel short. It is not possible to use a regular fader panel (960/21 or 960/27) in combination with the 19" integration kit.

- 1) It is strictly forbidden to incorporate 19" components with 230V power supply in the desk. The integration of a product with 230V power will result in the loss of all certification. Lawo will assume no liability for problems caused by such integration.
- 2) For the integration of a regular User Panel (incl. a simple cover plate) you have to order:
  1. 960/55 Integration Kit User panel.
  2. Order number of the user panel
- 3) If using the User Panel in combination with a short fader panel 960/32 you also need the cover plate 960/29.
- 4) The integrated 19" components are connected via a special cable duct on the connection panels at the rear of the desk. The dimensions of this cable duct are customised; please specify the dimensions with your order.
