ADAMEDIT.INI Volumes Modification

The default range for Analog gains is $\pm 20\text{dB}$. Modifying the INI file will allow a full range of adjustment of -91dB to $+31.5\text{dB}$.

The ADAMEDIT.INI file can be found in the ADAMedit directory.

After opening the ADAMEDIT.INI file, go to the VOLUMES section and change to the Following:

Max Trims 255 (default 232)

Min Trims: 10 (default 152)

Save the changes and reopen ADAMEDIT

Note: exceeding the default limits may cause clipping of the audio signal. Lowering the levels below the default values may degrade the signal to noise specification.
