

Set internal SSA Mode DIP switches to mode 1, page 16 of SSA424 User Manual.

In this wiring method, the front panel channel select will have no effect thus preventing incorrect or conflicting channel selections.

Do Not turn on termination switches on SAP.

WARNING

DO NOT wire data pins at matrix end or SSA end. No data should be on 4 wire interconnect cables to SSA's or any other non-data device.

NOTE:

In this wiring scheme, ALL SAP channels are wet.
