ROHDE & SCHWARZ

We proudly present our new R&S®VENICE

24/7 365

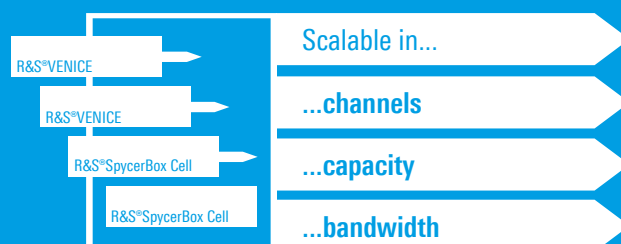

on-air reliability

Reliability – Sustainability – Scalability – Versatility

SDI and IP support

Industry-leading standard server models

The new R&S®VENICE platform

Endless possibilities and advantages

The new R&S®VENICE platform can be flexibly adapted to your requirements thanks to its software architecture and scalability. For channel playout, studio and live applications, the best application scenario is always just a software license away. The foundation is our new R&S®VENICE server core paired with commercial off-the-shelf hardware and a video I/O board designed by Rohde&Schwarz. This allows R&S®VENICE to connect to traditional SDI infrastructures and be ready for upcoming IP technologies. You control the pace of the transition.

R&S®VENICE – built for today, ready for tomorrow.

Key Features

On-air reliability

The entire system has no single point of failure due to the redundancy of every system-relevant component.

Hybrid SDI/IP functionality

Equipped with a new video I/O board, R&S®VENICE now offers hybrid SDI and IP functionality. Whether you use SDI, IP or both at the same time – it just works.

Flexible system design

R&S®VENICE can be scaled to meet your requirements, no matter how many channels and how much storage capacity or bandwidth you need.

UHD and HDR-ready

R&S®VENICE supports up to one UHD p60 channel (bidirectional) and four HD p60 channels (bidirectional) and handles HDR material with ease.

Standard server platform

R&S®VENICE uses a standard IT server whose reliability and performance has proven itself a thousand times over in data centers worldwide.

Comprehensive software-based codec support

R&S®VENICE minimizes the need for transcoding by supporting a variety of software-based codecs that can be expanded via future software updates.

Service-oriented architecture

FIMS and web services communications allow the greatest possible interoperability, flexibility and integrability in the broadcast value chain. R&S®VENICE is easy to integrate into existing infrastructures and can be dynamically adapted to meet any requirement.

Storage options

R&S®VENICE can be equipped with up to 14 terabyte internal RAID storage and connected to external storage solutions.

Reliability

Hybrid SDI / IP

Flexible system

UHD / HDR

COTS platform

Multi-codec support

Storage options

R&S®VENICE for channel playout

R&S®VENICE is built for 24/7 operation. The combination of a commercial off-the-shelf server, the new Rohde & Schwarz virtual storage access (VSA) technology and our proven R&S®SpycerBox Cell offers unrivalled stability and speed in challenging channel playout scenarios. The Rohde & Schwarz VSA layer serves as a separation plane between the software and hardware to simulate a single storage entity. Additionally, all system-relevant components are redundant to prevent a single point of failure.

R&S®VENICE channel playout – On air. 24/7.

Benefits

Major automation support

R&S®VENICE can be controlled via VDCP (serial and TCP/IP) and FIMS web services from industry-leading automation manufacturers.

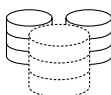

Device manager

Thanks to the new administration tool, you can set up and configure all R&S®VENICE servers, R&S®SpycerBox Cell storage units and R&S®Spycer Media Gateway servers in a network.

DolbyE decoding

R&S®VENICE can decode or simply pass through DolbyE coded audio content without requiring external systems.

Rohde & Schwarz virtual storage access technology (VSA)

To completely prevent single points of failure, the new Rohde & Schwarz VSA technology virtualizes a single point of access for redundant storage repositories. In combination with the redundant system-relevant components, the Rohde & Schwarz VSA technology enables continuous broadcast operations.

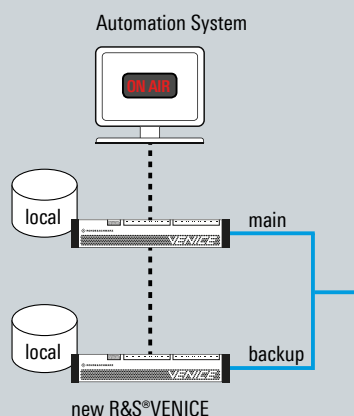

Centralized broadcast storage

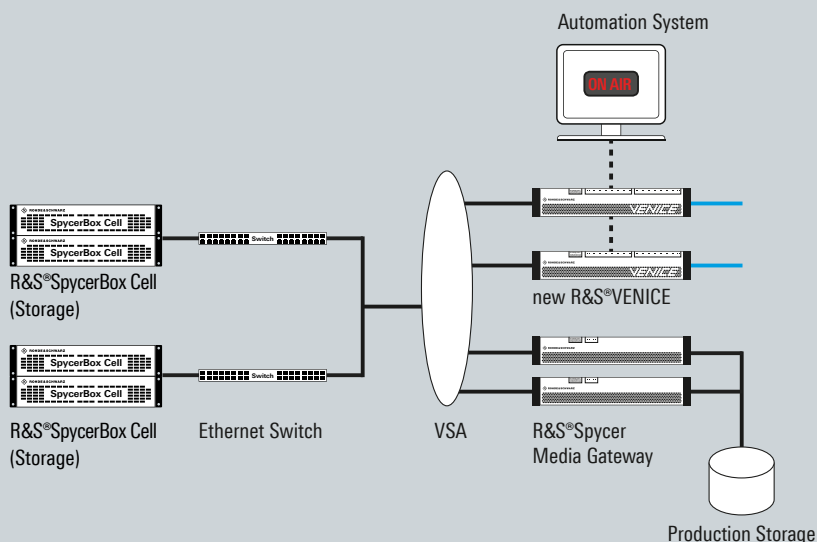

An essential part of the playout solution is the high-performance R&S®SpycerBox Cell storage unit. R&S®SpycerBox Cell is a flexible and modular shared storage solution with up to 30 hot-swappable drives in one rack unit. It is the core of the R&S®VENICE broadcast environment, offering the perfect combination of performance, redundancy and easy maintenance.

Use case examples

1+1 redundancy

1+n redundancy

R&S®VENICE for studio production

R&S®VENICE is perfect for your studio applications. Top-notch hardware in combination with an improved software architecture, rich feature set and versatile software applications allow you to experience well-established studio applications at an unprecedented level. From multi-camera ingest to content preparation to studio playout and much more, R&S®VENICE is ready to master your challenge.

R&S®VENICE studio production – unmatched in flexibility.

R&S®VENICE application suite

R&S®VENICE Control

Rohde&Schwarz developed R&S®VENICE Control in close cooperation with leading studio operators to meet the high demands of multi-camera recordings. R&S®VENICE Control makes it possible to record up to 16 independent SD, HD or UHD-1 channels in all professional production and broadcast formats.

R&S®VENICE Maintenance

R&S®VENICE Maintenance was designed to meet the specific needs of administrators. As a client-server application, it lets you conveniently acquire log files from all R&S®VENICE systems in the network.

R&S®VENICE Play*

The R&S®VENICE Play software application was designed to simplify your life in hectic studio and live situations. R&S®VENICE Play provides clarity when managing multiple channels for studio and production playout applications.

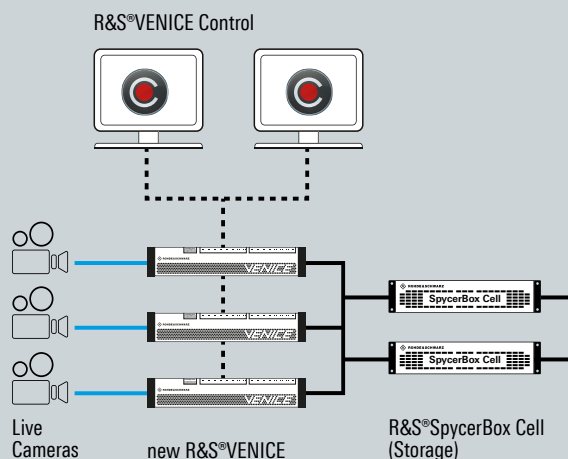

R&S®VENICE View

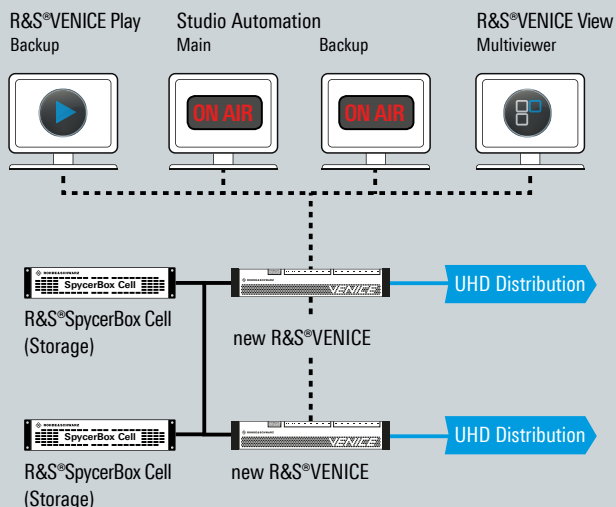

R&S®VENICE View, a dedicated multiviewer application from Rohde&Schwarz, is the perfect addition to the R&S®VENICE product line. R&S®VENICE View uses a sophisticated IP-based software architecture that makes costly conventional SDI infrastructure and dedicated multiviewer hardware obsolete.
