CAMERA CONTROL UNIT

HDCU4300

OPERATION MANUAL English

1st Edition

Table of Contents

Overview

The HDCU4300 Camera Control Unit connects to a HDC4300 Color Camera with an optical fiber cable, and carries out the processing of video signals from the camera and provides an interface with external equipment.
Connecting a camera facilitates 4K video shooting or HD high frame rate video shooting. HD normal speed video and SD normal speed video can even be simultaneously output when 4K video shooting and HD high frame rate video shooting.

This unit may be combined with an MSU-1000 series Master Setup Unit (optional) or an RCP-1000 series Remote Control Panel (optional) to form a camera control system. This enables you to configure a system capable of controlling multiple video cameras.

Note

Before operating the system, check that the software and ROM versions of each of this unit, HDC4300, MSU-1000 series, and RCP-1000 series are supported.

System Configuration

Note

Production of some of the peripherals and related devices shown in the figures may have been discontinued.
For advice on choosing devices, please contact your Sony representative or dealer.

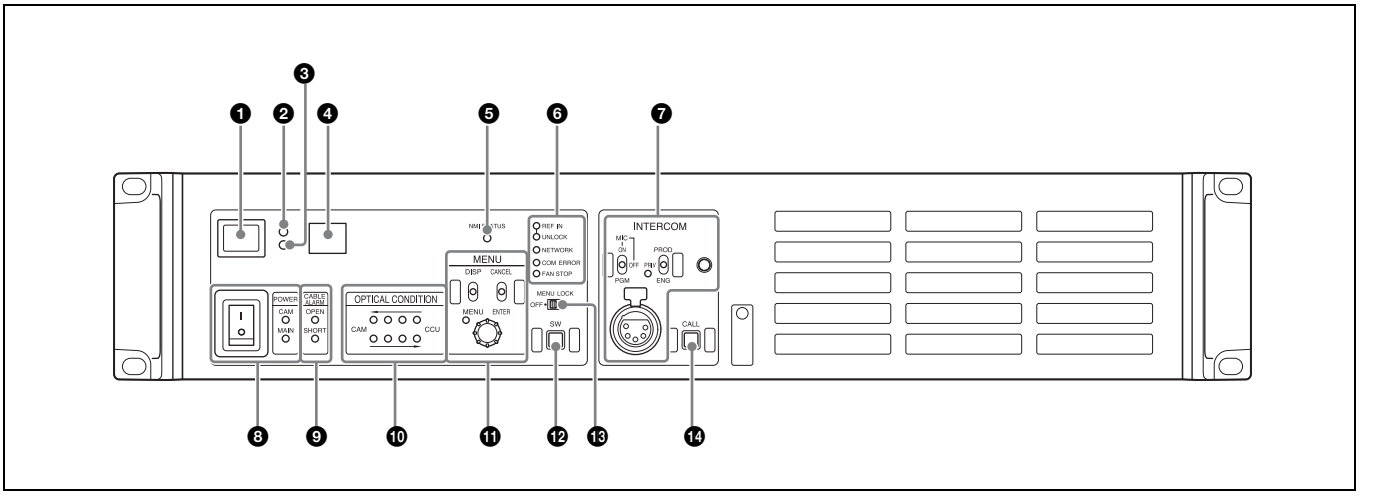
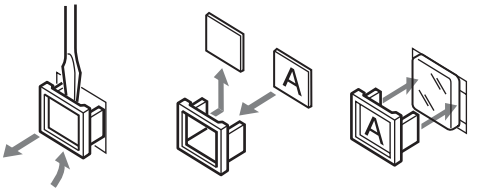
Locations and Functions of Parts

Front Panel



❶ Red tally indicator

Lights in red when this unit receives a red tally signal. You can attach the supplied number plate here.



❷ Yellow tally indicator

Lights in yellow when this unit receives a yellow tally signal.

❸ Green tally indicator

Lights in green when this unit receives a green tally signal.

❹ CCU number display

Displays the camera number set in the CCU menu.

❺ NMI STATUS indicator

Reserved for future use.

❻ Status display indicator

REF IN (Green): REFERENCE is being input.

UNLOCK (Red): The input REFERENCE is not locked.

NETWORK: Displays the status when there is a network system connection.

On: When CNS SETTING in the NETWORK SETTING menu is set to either BRIDGE or MCS, this indicates that external control equipment (MSU-1000/1500 Master Setup Unit, RCP-1000 series Remote Control Panel, or other equipment) is connected.

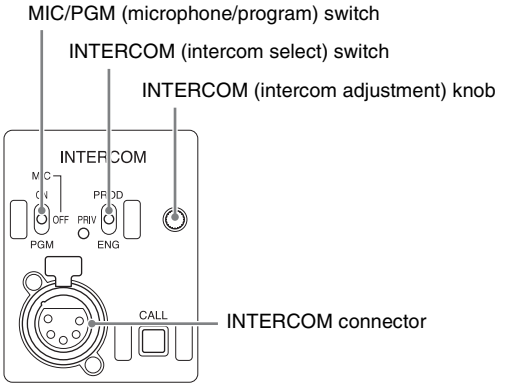
Flashing: When CNS SETTING in the NETWORK SETTING menu is set to either BRIDGE or MCS, this indicates that the unit cannot connect correctly with the external control equipment (MSU-1000/1500 Master Setup Unit, RCP-1000 series Remote Control Panel, or other equipment).

Off: When CNS SETTING in the NETWORK SETTING menu is set to either BRIDGE or MCS, this indicates that a LAN cable is not connected or that the network system connection settings have not been configured.
When the CNS SETTING in the NETWORK SETTING menu is set to LEGACY, this remains turned off.

COM ERROR (Red): Communication with the camera or external control equipment (such as the RCP-1000 series Remote Control Panel) is not possible.

FAN STOP (Red): The fan is stopped.

❼ INTERCOM audio input/output and control block



- **MIC/PGM (microphone/program) switch**

ON: Turns the headset microphone on.

OFF: Turns the headset microphone off.

PGM: Selects program audio output. In this mode, the INTERCOM knob adjusts the headset program audio level.

• **INTERCOM (intercom select) switch**

Selects the intercom signal input/output connection source for the INTERCOM connector on the front panel.

PROD: Connects the producer line.

PRIV: Blocks the connection to the producer line or engineer line, allowing private intercom talk between the CCU and the camera.

ENG: Connects the engineer line.

• **PRIV (private) indicator**

Lights when the intercom is in private mode.

• **INTERCOM (intercom adjustment) knob**

Adjusts the receiver audio level of the intercom.

• **INTERCOM connector (XLR 5-pin)**

Connects the intercom headset.

To use a headset with a plug other than an XLR 5-pin plug, consult a Sony service or sales representative.

❽ MAIN POWER switch and indicator

Turns the entire camera system on and off, including this unit, the video camera, and the RCP-1000 series Remote Control Panel connected to the REMOTE connector of this unit. Press the "**I**" side to turn the camera system on, and the "○" side to turn it off. The MAIN indicator lights when the power switch of the unit is turned on. The CAM indicator lights when power is supplied the video camera.

❾ CABLE ALARM indicators

SHORT (red): Lights in red when the power supply cord of an optical fiber cable is shorted to the outer sheath, or two power supply cords are shorted. Power is not input to the camera when this indicator lights.

OPEN (red): Lights in red when a camera is not connected to the CAMERA connector on the rear panel of this unit via an optical fiber cable.

❿ Optical signal reception status indicator

Indicates the communication status of the camera and CCU.

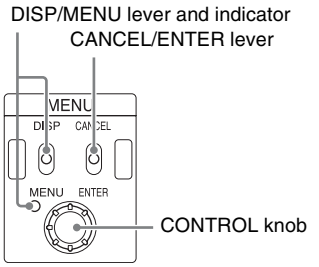
When the two lamps on the right (green) are lit: Reception status is excellent.

When the second lamp from the right (green) is lit: Reception status is good.

When the second lamp from the left (yellow) is lit: Reception status is low.

When the lamp on the left (red) is lit: Reception status is at the lowest level.

⓫ MENU control block



• **DISP/MENU lever and indicator**

Selects the status display or setup menu display. In setup menu mode, the indicator turns on.

• **CANCEL/ENTER lever**

In setup menu mode, used to cancel and enter settings.

• **CONTROL knob (rotary encoder)**

In status screen mode, used to change the displayed page. In setup menu mode, used to move the cursor on a page and to change menu settings.

Pressing the CONTROL knob performs the same function as setting the CANCEL/ENTER lever to the ENTER position.

⓬ Assignable button

You can set a function for this button via the CCU menu.

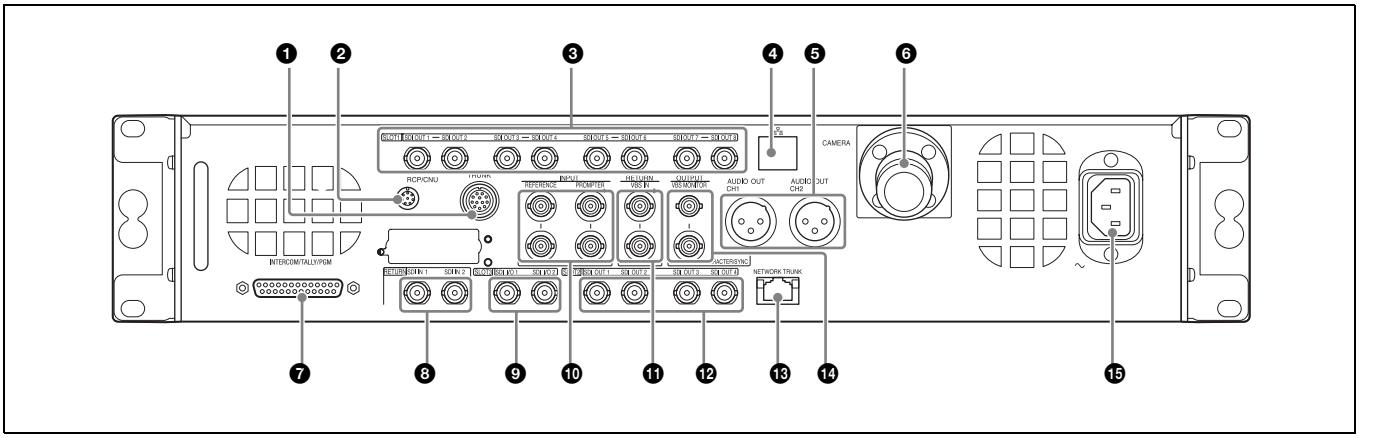
⓭ Menu lock switch

This locks out operation of the front panel menu operation area.

⓮ Call button

When pressed, this outputs a call signal to the camera or external control device (the RCP-1000 series, etc.) that are connected to this unit. Use this when you want to call and speak with the camera operator or external control device operator via intercom. This button lights in red when it is pressed or the call button of other equipment is pressed.

Rear Panel



❶ TRUNK A connector (round 12-pin)

Used to connect to the CCU connector on a video camera via an RS-232C or RS-422A interface. Communication with up to two channels is available.

❷ RCP/CNU connector (round 8-pin)

Used to connect to an MSU-1000 series Master Setup Unit, CNU-700 Camera Command Network Unit, or RCP-1000 series Remote Control Panel via a CCA-5 Connection Cable. Control signals are sent and received via this connector. When using an RCP-1000 series unit, power is also supplied.

❸ 3G/HD SDI OUTPUT (SDI output) connector (SLOT1) (BNC-type)

Used to output video signals from the video camera using Multi-Link format comprising 3G-SDI signals or HD-SDI signals.

For details about the assignment to each signal output connector for the Multi-Link format, see *"Relationship between Connection Type and BNC Connector Assignment" (page 12)*.

❹ (LAN) connector (RJ-45 8-pin)

Used to connect to a LAN. Connect a LAN HUB (10BASE-T/100BASE-TX), using a LAN cable (shielded type of category 5 or more).

❺ AUDIO OUT CH1, CH2 (audio output 1, 2) connectors (XLR 3-pin)

Used to output the audio signal to the AUDIO IN connectors of the video camera.

❻ CAMERA connector (optical fiber connector)

Used to connect a video camera, using an optical fiber cable. All video camera signals, including power supply, control, video, and audio, are sent and received over one optical fiber cable.

Note

Dust on the connection surface of the optical fiber cable may result in transmission errors. When not connected, always cover the end of the connector with the supplied cap.

❼ INTERCOM/TALLY/PGM (intercom/tally/program audio) connector (D-sub 25-pin)

Used to input and output intercom, tally, and program audio signals. Connect to the intercom/tally/program audio connector of the intercom system.

REAR PREVIEW function: 10-pin is assigned for the output pin of the REAR PREVIEW function.

❽ RETURN SDI IN 1/2 (3G/HD/SD-SDI return video 1/2) connectors (BNC-type)

Two different 3G/HD/SD-SDI return video input signals may be received independently. The selection of RET 1 or 2 is made by the return switch of the video camera. The aspect ratio can also be selected for an SD signal.

The type of input signal on RET 1 and 2 may be set individually using the setup menu, or using the MSU-1000 series Master Setup Unit.

For details on the setup menu, contact a Sony service or sales representative.

Refer also to the Master Setup Unit manual.

❾ 3G/HD SDI I/O 1/2 (SDI input/output 1/2) connectors (SLOT3) (BNC-type)

These can be used as return video inputs, HD prompter inputs, camera video signal outputs, and HD-TRUNK outputs. Set them in SLOT3 on the <I/F SETTINGS> page of the MAINTENANCE menu according to the application.

❿ INPUT area

① PROMPTER 1, 2 (tele-prompter input) connectors (BNC-type)

Input the prompter signal of 1 channel or 2 channels depending on the setting of PROMPTER CHANNEL MODE on the <TRUNK/PROMPTER1> page of the MAINTENANCE menu. When 1 channel is set, the input signal is output from the other connector as is (loop-through). If loop-through output is not used, terminate the unused connector at 75 ohms. When 2 channels are set, both connectors become inputs and they are terminated at 75 ohms inside the unit.

If the signal used is a 1.0 Vp-p, 75-ohm analog signal, it may be output from the PROMPTER OUT connector of the video

camera with a frequency bandwidth of 5 MHz, regardless of signal format.

② REFERENCE connectors (BNC-type)
Input an HD tri-level reference sync signal or SD reference sync signal (black burst signal, or black burst signal with 10 Field ID) to either of the two connectors.
The input signal is output from the other connector as is (loop-through output). If loop-through output is not used, terminate the unused connector at 75 ohms.
The type of reference signal is selected using the setup menu, or using the MSU-1000 series Master Setup Unit.

For details on the setup menu, contact a Sony service or sales representative.

Note

When a black burst signal with a 10 Field ID is input, 10F BB on the <GENLOCK> page of the SYSTEM OPERATION menu must be set to ON.

⓫ RETURN VBS IN 3/4 (VBS return video input 3/4) connectors (BNC-type)
Two different VBS return video input signals may be received independently.
The selection of RET 3 or 4 is made by the return switch of the video camera. The type of input signal on RET 3 and 4 may be set individually using the setup menu, or using the MSU-1000 series Master Setup Unit. An aspect ratio may also be selected for SD signals.

For details on setup menu operations, contact a Sony service or sales representative.

Refer also to the Master Setup Unit manual.

⓬ 3G/HD SDI OUTPUT (SDI output) connector (SLOT2) (BNC-type)
The signal from the video camera may be output as four 3G-SDI signals, HD-SDI signals or SD-SDI signals. They can output signals with superimposed text characters and markers.

For details on settings, contact a Sony service or sales representative.

⓭ NETWORK TRUNK connector (RJ-45 8-pin)
Used to connect the NETWORK TRUNK connector of the device connected to the camera with the network connection device.

⓮ OUTPUT area

① VBS MONITOR (VBS monitor output) connector (BNC-type)
Outputs an SD analog video signal.

② CHARACTER/SYNC (character output / sync signal output) connector (BNC-type)
Outputs the self-diagnostic results or setup menu of the unit as an SD analog video signal. If CHARACTER/SYNC OUT on the <I/F SETTINGS> page of the MAINTENANCE menu is set to SYNC, this connector can also be used as the sync signal output (SYNC) connector. An SD composite sync or HD tri-level sync signal will be output from the internal sync signal generator.

For details on how to select the signal, contact a Sony service or sales representative.

⓯ AC IN (AC power input) connector
Use the specified AC power cord to connect to an AC power supply. The AC power cord can be secured to this unit, using the plug holder (optional).

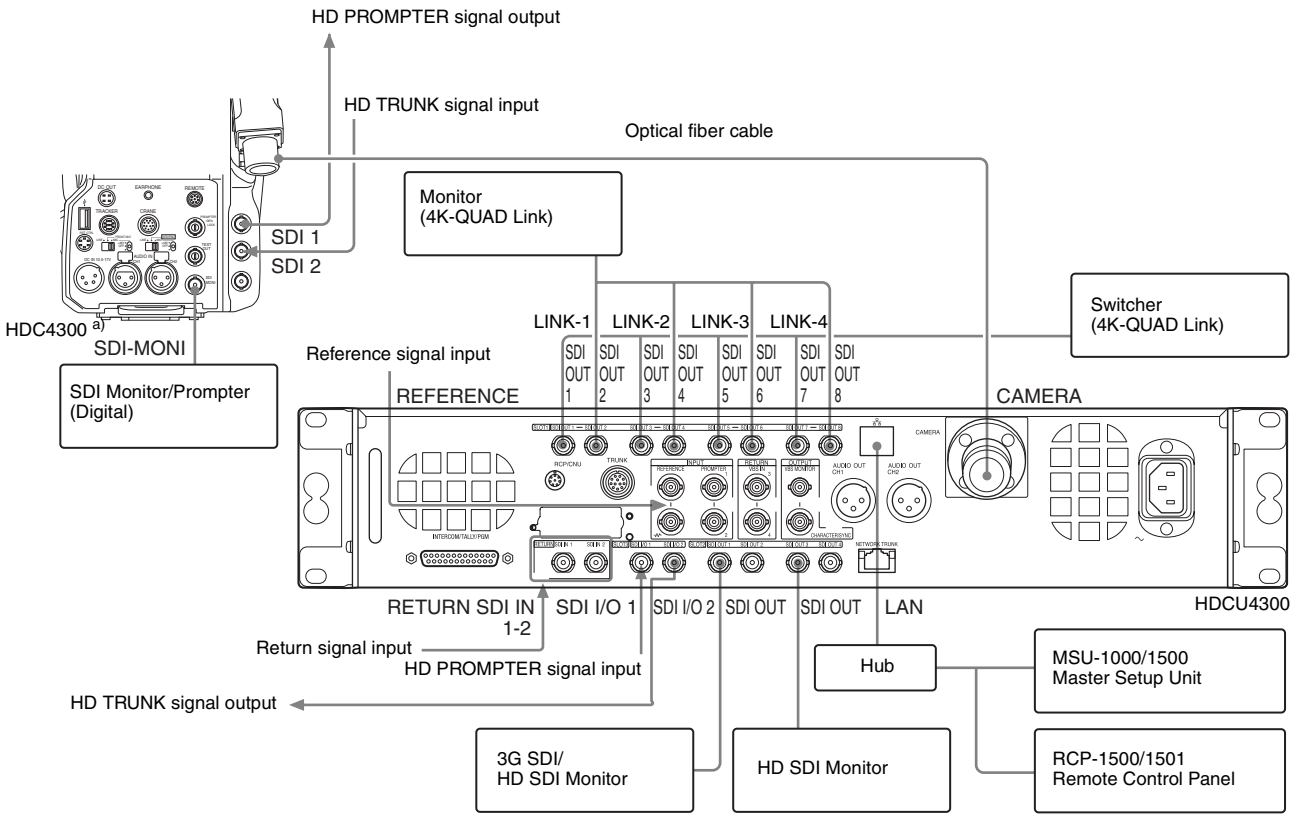
Connections and Settings

4K System Connection

A 4K format camera system is formed by connecting the unit and a video camera (HDC4300) with an optical fiber cable. The functions provided by the unit (genlock, power supply to the video camera, various interface functions, etc.) can be used as is.

HD signals down-converted from 4K signals can be output from SLOT2 and SLOT3.

Connection example



a) To enable 4K output, install the SZC-4001 series 4K upgrade software.

For details about the assignments of BNC connectors of the unit, see "Relationship between Connection Type and BNC Connector Assignment" (page 12).

Settings

Device	Purpose	Menu/Page	Item	Set value

HFR Video System

The unit can transfer HFR video and perform signal processing for the following formats according to the connected camera.

○: Supported – : Not supported

HFR format	Connected device	
	HDC4300 (without option)	HDC4300 (when SZC-4002 series installed on the unit)
1080/59.94P (2x) 1)	○	○
1080/50P (2x) 1)	○	○
720/59.94P (2x) 2)	○	○

1) Interlaced output is also supported in HD HFR 1080 format.

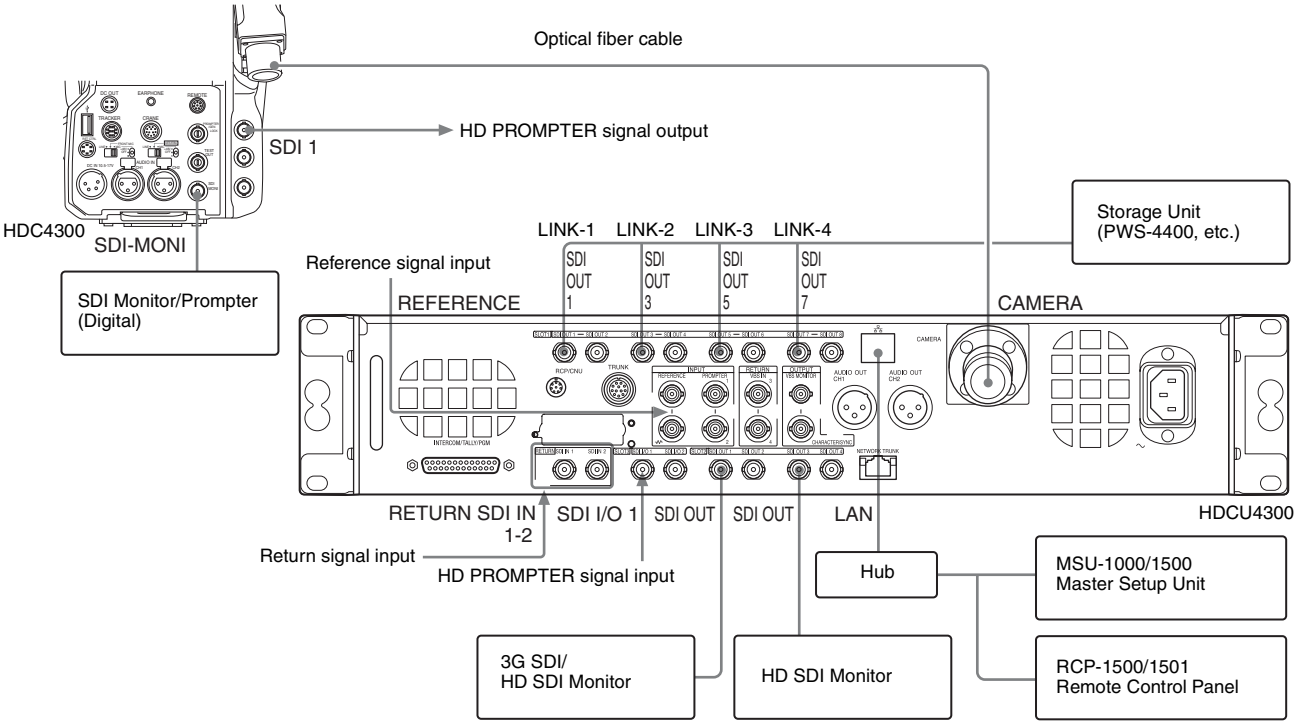
2) Selectable only when the format is set to 720P.

1x video can be output at the same time from SLOT2 and SLOT3.

Note

The HFR imaging function is dependent on the software version of the connected camera. Check the compatibility of each device before use.

Connection example (4x HD)



For details about the assignments of BNC connectors of the unit, see “Relationship between Connection Type and BNC Connector Assignment” (page 12).

Relationship between Connection Type and BNC Connector Assignment

The names of output interfaces in Table 1 correspond to connector assignments in Table 2 *(page 14)*. Check the output interface for the format you want to use in Table 1, then check the signal that can be assigned to each BNC connector in Table 2.

b) SDI OUT 3 and SDI OUT 4 output the same data.

c) SDI OUT 5 and SDI OUT 6 output the same data.

d) SDI OUT 7 and SDI OUT 8 output the same data.

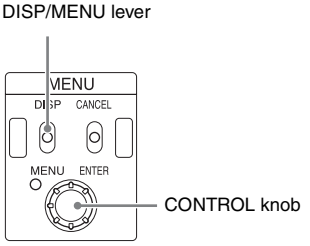
Status Display

The CCU system status can be monitored using a video monitor connected to the PIX connector.

For information on monitoring and changing settings, see “Menu Settings” (page 17).

Displaying the Status Screen

The status screen is controlled using the knob and levers in the MENU control block on the front panel.



To display the status screen

Set the DISP/MENU lever to the DISP position. The most recently viewed status screen page is displayed (when first powered on, the camera settings page is displayed). Turning the CONTROL knob changes the displayed page.

To exit the status screen display

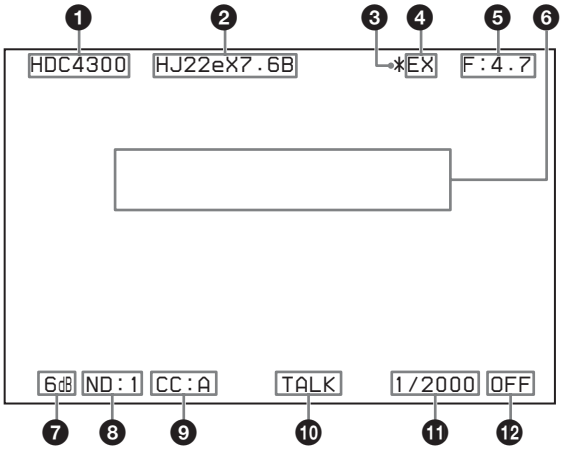
In status screen display mode, set the DISP/MENU lever to the DISP position.

Status Display Screen

The following information is displayed on the status display screen.

- Camera settings
- System status
- Camera and unit audio status
- Camera and unit intercom status
- Warning display

Camera settings



❶ CHU MODE indication

Displays the CHU MODE (connected camera).

❷ Lens file name indication

Displays the lens file name.

❸ F drop indication

Displayed when an F drop occurs.

❹ EX (lens extender) indication

Displayed during use of the lens extender.

❺ F-stop value indication

Displays the lens F-stop value (iris value).

❻ Camera auto control information area

Top: Displays the Auto Setup type and execution status.

Bottom: Displays the execution item.

❼ Gain value indication

Displays the video output signal gain setting value (dB).

❽ ND filter indication

Displays the currently selected ND filter type.

❾ CC filter indication

Displays the currently selected CC filter type.

❿ Camera microphone status indication

Displayed when the camera microphone is on.

⓫ Shutter speed/Clear scan frequency indication

Displays the shutter speed. When ECS is on, displays the clear scan frequency.

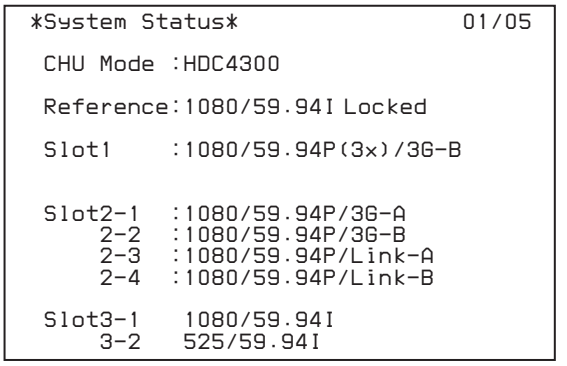
⓬ Shutter/ECS indication

Displays the on/off state of the shutter/ECS.

Notes

- Items that are turned off using the <DISPLAY> page settings of the VIDEO/MONITOR menu are not displayed.
- A “-” mark is displayed for each item when a camera is not connected.

System status



CHU Mode: CHU MODE (connected camera) setting
Reference: Reference signal format used and genlock status ("Not detected" is displayed when a reference signal is not input)

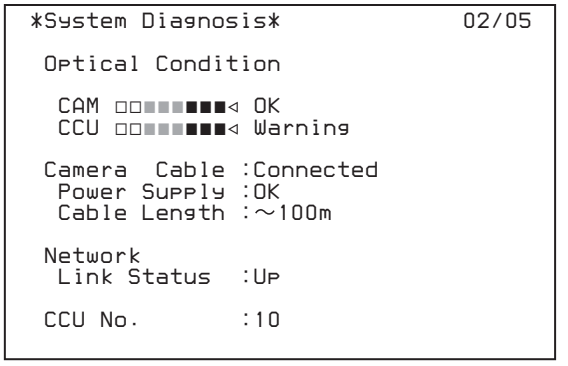
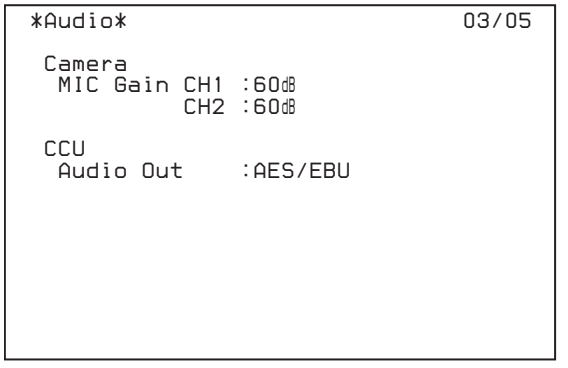
Slot2: Output signal format of each connector of SLOT2
Slot3: Output signal format of each connector of SLOT3

Camera system diagnostics



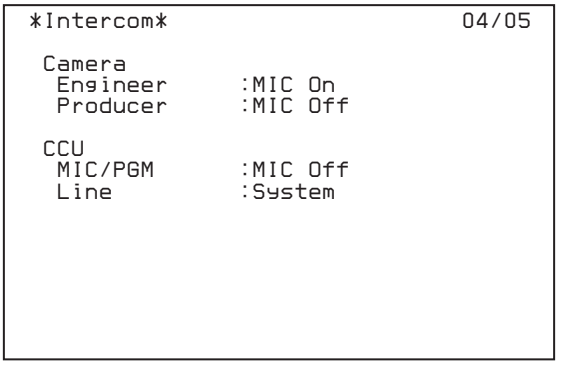
Optical Condition CAM: Camera light sensor level
Optical Condition CCU: Unit light sensor level
Camera Cable: Camera cable connection status
Power Supply: Camera power supply status
Cable Length: Cable length
Network Link Status: LAN connection status
CCU No.: CCU number setting status

Camera and unit audio status



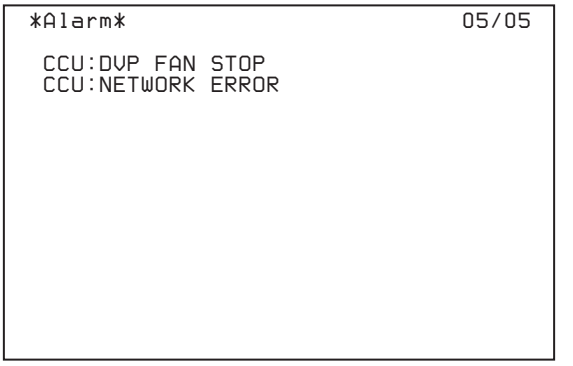
Camera MIC Gain CH1: Camera microphone circuit 1 amp gain status
Camera MIC Gain CH2: Camera microphone circuit 2 amp gain status
CCU Audio Out: Output format of the AUDIO OUT connector of the unit

Camera and unit intercom status



Camera Engineer: Camera microphone status of the ENG line of the camera
Camera Producer: Camera microphone status of the PROD line of the camera
CCU MIC/PGM: Status of MIC/PGM switch on the front of the unit
CCU Line: Intercom system connection status

Warning display



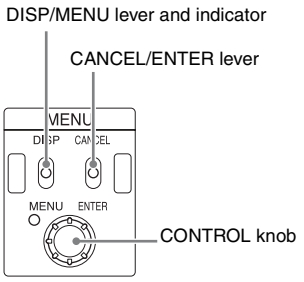
Displays any warning that occurs.

Menu Settings

The CCU system and peripheral settings can be checked and modified using a video monitor connected to the PIX connector.

Changing Menu Item Settings

The menu screen is controlled using the knob and levers in the MENU control block on the front panel. Setting the CANCEL/ENTER lever to the ENTER position and pressing the CONTROL knob perform the same function.



To display a menu page

Set the DISP/MENU lever to the MENU position.
When first powered on, the CCU MENU page is displayed.

To display the CCU MENU page

In menu display mode, turn the CONTROL knob to move the pointer (➡) to TOP in the upper right corner of the menu page, then press the CONTROL knob. The CCU MENU showing the menu configuration is displayed.

```

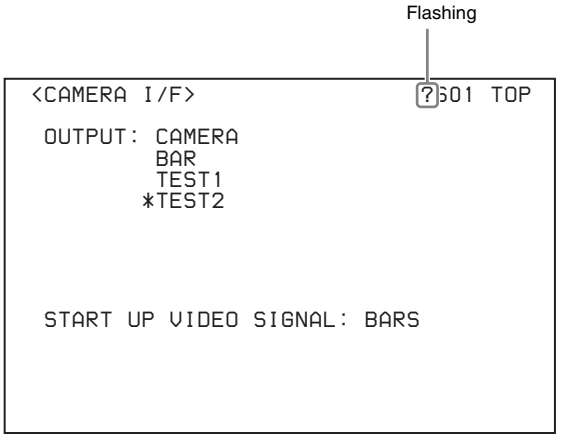
SYSTEM OPERATION	Input/output signal format and system-related settings
VIDEO/MONITOR	Video-related settings
AUDIO/INTERCOM	Audio- and intercom-related settings
MAINTENANCE	CCU configuration settings
NETWORK	Network-related settings
DIAGNOSIS	Displays the unit status.

To select an item in the CCU MENU

Turn the CONTROL knob to move the pointer (➡) up/down to the desired menu item, then press the CONTROL knob. The most recently viewed page in the selected menu is displayed.

To change the displayed page

1 **Turn the CONTROL knob to move the pointer (➡) to the page number, then press the CONTROL knob.**
The pointer (➡) changes to a flashing question mark (?).



2 **Turn the CONTROL knob to change the displayed page to the desired page, then press the CONTROL knob.**
The question mark (?) changes back to the pointer (➡). Items on the page can now be selected and changed.

To change a menu item setting

If a question mark (?) is displayed beside the page number, press the CONTROL knob to restore the pointer (➡). Items on the page can now be selected and changed.

1 **Turn the CONTROL knob to move the pointer to the desired item, then press the CONTROL knob.**
The pointer (➡) changes to a flashing question mark (?).

2 **Turn the CONTROL knob to change the setting.**

To cancel a changed setting
Set the CANCEL/ENTER lever to the CANCEL position before pressing the CONTROL knob. The item is restored to its current setting.

To suspend menu changes
Set the DISP/MENU lever to the MENU position to exit the menu screen.
The DISP/MENU lever can be set to the MENU position again to restart the operation.

3 **Press the CONTROL knob.**
The question mark (?) changes back to the pointer (➡), and the item setting is registered.

4 **Repeat steps 1 to 3 to change other settings on the same page.**

To enter a character string

Some menu items require a character string input.
Moving the pointer (➡) to an item with a character string input and pressing the CONTROL knob displays a rectangular cursor and a list of selectable characters.
Turning the CONTROL knob moves the cursor between characters. The following menu item has character strings:

- VIDEO/MONITOR menu → <BAR CHARACTER> page → BAR CHARACTER

1 **Move the text cursor to the input position, then press the CONTROL knob.**
A second cursor is displayed in the character list.

2 **Turn the CONTROL knob to move the cursor to the desired character, then press the CONTROL knob.**
Repeat steps 1 and 2 to enter other characters.

- Select INS to insert a space character at the cursor position.
- Select DEL to delete the character at the cursor position.
- Select RET to return to step 1 without changing the string.
- Entering the maximum number of characters (up to the right edge) moves the cursor to ESC on the lower right of the character list.

3 **Turn the CONTROL knob to move the cursor to END, then press the CONTROL knob.**
The new input string is registered.

To cancel the character string setting
Turn the CONTROL knob to move the cursor to ESC, then press the CONTROL knob.

To exit the menu display

In menu display mode, set the DISP/MENU lever to the MENU position.

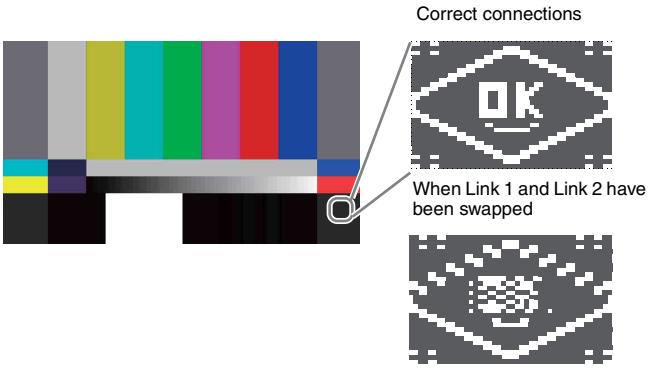
4K 2SI diamond marks

This function is for displaying a test pattern like the following in the area at the bottom right of the 4K color bar when 4K 2 sample interleave output. OK is displayed if the connections for Links 1 to 4 are correct, and OK is not displayed if they are incorrect. This function can be used to check the connections.



HFR channel marks

This function is for displaying marks in the video area of HD HFR output.

The number of squares indicates the channel number so you can easily identify the channel number of a multi-link interface.

Example: Indication for channel 4

Appendix

Precautions

If the unit is suddenly taken from a cold to a warm location, or if ambient temperature suddenly rises, moisture may form on the outer surface of the unit and/or inside of the unit. This is known as condensation. If condensation occurs, turn off the unit and wait until the condensation clears before operating the unit. Operating the unit while condensation is present may damage the unit.

The fan and battery are consumable parts that will need periodic replacement.
When operating at room temperature, a normal replacement cycle will be about 5 years. However, this replacement cycle represents only a general guideline and does not imply that the life expectancy of these parts is guaranteed. For details on parts replacement, contact your Sony representative.

The life expectancy of the electrolytic capacitor is about 5 years under normal operating temperatures and normal usage (8 hours per day; 25 days per month).
If usage exceeds the above normal usage frequency, the life expectancy may be reduced correspondingly.

Do not push the mesh portion of the front panel with your fingers or sharp objects.

Operating environment

- Avoid high-temperature rooms and near sources of heat.
- Do not place in locations with strong electric or magnetic field.
- Dry location with good ventilation.
- Avoid locations exposed to sunlight or strong lighting.

Avoid violent impacts

Dropping the unit, or otherwise imparting a violent shock to it, is likely to cause it to malfunction.

Do not cover with cloth

While the unit is in operation, do not cover it with a cloth or other material. This can cause the temperature to rise, leading to a malfunction.

After use

Set the POWER switch to the OFF position.

Care

If the body or panels of the unit become dirty, wipe them with a dry cloth. For severe dirt, use a soft cloth steeped in a small amount of neutral detergent, then wipe dry. Do not use volatile solvents such as alcohol or thinners, as these may damage the finish.

To prevent electromagnetic interference from portable communications devices

The use of portable telephones and other communications devices near this camera can result in malfunctions and interference with audio and video signals.
It is recommended that the portable communications devices near this camera be powered off.

Error message

When an error is detected in this unit or the camera, the ALARM indicator turns on and an error message is displayed on this unit.

Error message	Indication
CCU:GENLOCK ERROR	External reference sync error
CCU:10FIELD-ID ERROR	10Field ID is not detected even though the 10F BB setting is On
CCU:FORCE LEGACY	FORCE LEGACY is set for CNS MODE
CCU:PS FAN STOP	Power supply block FAN error
CCU:PS CABLE SHORT	CAMERA connector optical fiber cable short circuit error
CCU:PS CABLE OPEN	CAMERA connector optical fiber cable open circuit error
CCU:PS RCP POWER SUPPLY ERROR	Remote control panel (connected to REMOTE connector) power supply error
CCU:PS TEMP WARNING	Power supply unit temperature error
CCU:DVP FAN STOP	DVP board fan stopped
CCU:OPTICAL CONDITION ERROR	Light sensor level on CCU side dropped
CCU:OPTICAL CONDITION WARNING	
CCU:OPTICAL CONDITION CARE	
CCU:COMMAND ERROR	Command communication error of camera and remote control panel
CCU:XXX POWER ERROR	Board power supply section error (XXX is the board name)
CCU:XXX PLD ERROR	PLD error (XXX is the PLD name)
CCU:XXX TEMP WARNING	Board temperature exceeded (XXX is the board name)
