Service Overview

2-1. Cleaning the Filter

WARNING

Be sure to turn off the power switch and disconnect the power cord from the outlet before starting any work.

CAUTION

- The temperature inside the unit increases if dust adheres to the filter and the ventilation holes are blocked. Touching inside the unit while it is hot may result in burn injuries.

Procedure

1. Remove the front panel. (Refer to Section 1-4.)
2. Remove the dust from the filter using a vacuum.

Note

If the filter is very dusty, it should be washed in water, and then dried completely.

2-2. Periodic Replacement Parts to Be Recommended

The fan used on the rear panel of this unit is periodic replacement parts to be recommended. The life of the fan is approximately 50,000 hours. The life corresponds to about five years and a half if the power is on all the time, so the fan should be replaced according to service conditions.

Note

For the replacement of the fan, refer to the optionally available PFV-SP3300 Maintenance Manual.
