

The following document describes how to upgrade a Vista 6 or Vista 7 desk from the 1st generation system PC (EpoX Board) to the new Asus Board. The upgrade should only be performed by qualified personnel, considering standard ESD and installation prerequisites. Please read these instructions carefully before starting the upgrade.

Order Numbers : 1.949.990.61 Vista 6 with 1-4 screens 1.949.990.71 Vista 7 with 1-4 screens
 1.949.990.62 Vista 6 with 5-8 screens 1.949.990.72 Vista 7 with 5-8 screens

The upgrade requires a soldering station incl desoldering braid, Allen Hex Drivers/wrenches 2/2.5/3, screwdrivers, cutting pliers.

The upgrade kit includes :

Pos

- | | | |
|---|-------|--|
| 1 | 1 x | ASUS Motherboard, tested and configured
inclusive 2 x 256 MB RAM Module, Processor and CPU Adapter CT 479 and connector panel |
| 2 | 1 x | Motherboard mounting set (3 spacer bolts, 4 fan mounting bolts) |
| 3 | 1 x | Fan assembly for Asus Motherboard (fan support frame with 120x120mm fan) |
| 4 | 1 x | Fan mounting set (4 x hex socket screws M3x5 with M3 Fin Washer) |
| 5 | 1 x | Hard Disk Set (tested, 2 serial ATA disks mounted on frame, SW installed) |
| 6 | 1-2 x | NVIDIA Quadro4 Graphics Card (1 card for 61/71 Kit, 2 cards for 62/72 kit) |

Cables and accessories :

- | | | | | |
|----|-------|--|-------------------|--------------------------------------|
| 7 | 1 x | COM2 Connector Panel | 89.20.1158 | |
| 8 | 2-4 x | DVI Adapter Cable "Y" | 89.20.1156 | (2x for 61/71 Kit, 4x for 62/72 kit) |
| 9 | 4-8 x | DVI Extension Cable | 54.13.1133 | (4x for 61/71 Kit, 8x for 62/72 kit) |
| 7 | 1 x | Supply cable (to be soldered) | from 1.949.150.93 | Distribution board - ASUS |
| 8 | 1 x | Power-On Cable | from 1.949.010.93 | Distribution board - ASUS |
| 9 | 1 x | USB Cable (flat ribbon USB) | 1.949.150.94 | Distribution board - ASUS |
| 10 | 1 x | PC Connector label set | | |
| 11 | 1 x | spare SATA cable | | |
| 12 | 1 x | mounting kit (2x 35.03.0121, 20 cable clips) | | |
| 13 | 1 x | CD set with disk images | | |
| 14 | 1 x | Motherboard accessories (CD, Manual ..) | | |

7 Supply ASUS

8 Power On

9 USB

7 COM2

10 Connector Labels

13 Disk Image

1. System Backup

- Copy your production and system data to an external medium (Memory stick, USB Harddisk, CD), both on main and redundant PC

D950systemdb: complete folder
D950projects: complete folder
D950system: complete folder
WinNT: d950system.ini

- switch off desk and remove all mains connectors
- remove bays above PC motherboard and distribution board

Example of Vista desk (Main Control System)

Distribution Board

Motherboard

Harddisk Frame

- memorize the cable positions and unplug all cables to motherboard and PCI cards (COM ports, keyboard/mouse, Video and Serial ports)

2. Remove Old Motherboard

PCI Cards :

Graphics 1 (2)

Serial

Memnet

RAID

- remove PCI card holder and disconnect IDE harddisk cables on the RAID card
- remove all PCI cards (and store them in a ESD safe place)
- disconnect all cables to the mainboard (supply, USB flat ribbon cable, IDE cable to CD Writer), Power-On and DVI video cables.
-> IDE cables from RAID card to hard disks, DVI Video cables and USB flat ribbon cables are no longer used or replaced with new ones.
- remove the clamp which mounts the heat sink to the CPU (take care to loosen counternut if present, before turning out the screw. Disassemble the heat sink from the chassis of the desk (no longer used)
- unscrew the motherboard from the chassis and lift it out of the desk.

3. Replace Harddisk

The 2 redundant hard disks are installed in separate SilentDrive enclosures and mounted in a common frame below one of the fader bays.

- Deinstall the CD Writer first by removing the 2 screws at the front, and unplug the IDE and power cable.

The frame is attached to the front panel with 4 screws (see left) and locked to the bottom frame with a mounting lug (2) or, in a later version B, suspended with a single screw at the bottom (3). For replacing disk proceed as follows.

- Remove the 4 front screw, and loosen the bottom screw in Frame B. You can then shift the frame back and lift it up

(2) HD Frame A

(3) HD Frame B

Remove the backcover of the harddisk enclosures and disconnecting the cables. Take the frame out of the desk and remove the harddisk IDE cables.

Remove the Harddisk from the frame and install the new harddisk frames with the serial ATA disks instead. Be sure to have the ATA cables labelled as SATA 1 (bottom) and SATA 2 (top)

4. Install Main Motherboard

4.1. An additional supply cable needs to be soldered to the Distribution Board. Plug in and solder the wires as indicated below. Use desoldering braid to clear the corresponding soldering terminals first.

4.2 Install the new connector plate, mind correct position of contact springs. Attach new connector labels

4.3 Mount the new preconfigured ASUS motherboard after installing the 3 additional bolts to the desk chassis at the rear of the board.

4.4 Connect Serial ATA cables (SATA1 at left, SATA2 at right). Add the 4 bolts with the rubber supports for the fan mounting

4.5 Connect fan supply and ...

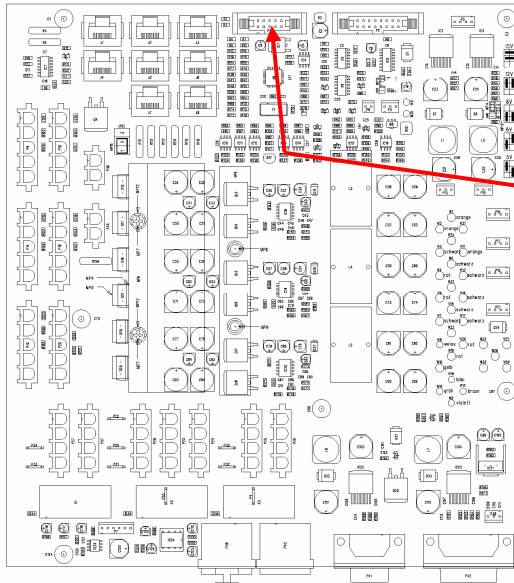

4.6 ... mount fan support with the M3x5 screws and washers.

4.7 connect power on cable to pin 4,5 (edge)
(use new cable which is included in kit , if old one is too short)

4.8. Install USB flat rippon cable from the distribution board (cable end marked with "DISTR")

to the main motherboard (cable end marked with "PC"), red wire at connector pin 1 (front)

Distribution Board 1.949.150.81/82

Motherboard ASUS P4P800 SE

4.9. Install Com2 panel and connect cable to indicated position on motherboards.

4.10 Reconnect cables to motherboard, insert PCI boards the documented positions (use new NVIDIA graphics cards instead of the previous Matrox ones) and mount PCI card holder.

4.11 Connect cables to PCI cards as before. If required, remove cable clips to adjust cable length to the new card position. Fix cables with new clips.

- > DVI cables are now splitted into adapter cable (connected to board) and extension cables to the bays.
- > start with connecting the Control Bay at port 1 of the first card (Video1) and continue with fader bays. After booting the system go to Display Properties – Settings, and press IDENTIFY. Arrange the Fader Bay icons in the same order as shown on the TFTs.

5. Setup System

- install the removed bays.
- Connect the mains cables and power-up the system. The system should again start correctly. The following components have changed with the hardware :
 - RAID Controller is no longer an external hardware controller but a built-in SW controller
 - Backup software has been replaced (Image for Windows replaces PQ Deploy Center)
- Verify the order of the TFTs (see item 4.10)
- Restore the user data from the backup medium both in main and redundant PC :
 - C:\D950systemdb
 - C:\D950projects
 - in C:\WinNT :
 - d950system.ini
 - complete folder "users"
 - d19devices.ini
 - all monxxx.ini and sigxxx.ini files
 - d950ofla.mop
 - vista.ini
 - staticautomation.ini
 - in C:\D950system :
- If there was any additional, optional software installed on your system, please take care to have all necessary software available for doing the required installations (standard UPS software is included in package).
