

# **Instruction Manual**

**Tektronix**

**TSG130A  
Multiformat Signal Generator  
SN B040000 and Above**

**071-0472-03**

**Warning**

The servicing instructions are for use by qualified personnel only. To avoid personal injury, do not perform any servicing unless you are qualified to do so. Refer to all safety summaries prior to performing service.

TEKTRONIX and TEK are registered trademarks of Tektronix, Inc.

## **WARRANTY**

Tektronix warrants that the products that it manufactures and sells will be free from defects in materials and workmanship for a period of three (3) years from the date of shipment. If a product proves defective during this warranty period, Tektronix, at its option, either will repair the defective product without charge for parts and labor, or will provide a replacement in exchange for the defective product.

In order to obtain service under this warranty, Customer must notify Tektronix of the defect before the expiration of the warranty period and make suitable arrangements for the performance of service. Customer shall be responsible for packaging and shipping the defective product to the service center designated by Tektronix, with shipping charges prepaid. Tektronix shall pay for the return of the product to Customer if the shipment is to a location within the country in which the Tektronix service center is located. Customer shall be responsible for paying all shipping charges, duties, taxes, and any other charges for products returned to any other locations.

This warranty shall not apply to any defect, failure or damage caused by improper use or improper or inadequate maintenance and care. Tektronix shall not be obligated to furnish service under this warranty a) to repair damage resulting from attempts by personnel other than Tektronix representatives to install, repair or service the product; b) to repair damage resulting from improper use or connection to incompatible equipment; c) to repair any damage or malfunction caused by the use of non-Tektronix supplies; or d) to service a product that has been modified or integrated with other products when the effect of such modification or integration increases the time or difficulty of servicing the product.

**THIS WARRANTY IS GIVEN BY TEKTRONIX IN LIEU OF ANY OTHER WARRANTIES, EXPRESS OR IMPLIED. TEKTRONIX AND ITS VENDORS DISCLAIM ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. TEKTRONIX' RESPONSIBILITY TO REPAIR OR REPLACE DEFECTIVE PRODUCTS IS THE SOLE AND EXCLUSIVE REMEDY PROVIDED TO THE CUSTOMER FOR BREACH OF THIS WARRANTY. TEKTRONIX AND ITS VENDORS WILL NOT BE LIABLE FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES IRRESPECTIVE OF WHETHER TEKTRONIX OR THE VENDOR HAS ADVANCE NOTICE OF THE POSSIBILITY OF SUCH DAMAGES.**

# General Safety Summary

Review the following safety precautions to avoid injury and prevent damage to this product or any products connected to it. To avoid potential hazards, use this product only as specified.

*Only qualified personnel should perform service procedures.*

## To Avoid Fire or Personal Injury

**Use Proper Power Cord.** Use only the power cord specified for this product and certified for the country of use.

**Use Proper Voltage Setting.** Before applying power, ensure that the line selector is in the proper position for the power source being used.

**Connect and Disconnect Properly.** Do not connect or disconnect probes or test leads while they are connected to a voltage source.

**Ground the Product.** This product is grounded through the grounding conductor of the power cord. To avoid electric shock, the grounding conductor must be connected to earth ground. Before making connections to the input or output terminals of the product, ensure that the product is properly grounded.

**Observe All Terminal Ratings.** To avoid fire or shock hazard, observe all ratings and markings on the product. Consult the product manual for further ratings information before making connections to the product.

Do not apply a potential to any terminal, including the common terminal, that exceeds the maximum rating of that terminal.

**Use Proper AC Adapter.** Use only the AC adapter specified for this product.

**Do Not Operate Without Covers.** Do not operate this product with covers or panels removed.

**Use Proper Fuse.** Use only the fuse type and rating specified for this product.

**Avoid Exposed Circuitry.** Do not touch exposed connections and components when power is present.

**Do Not Operate With Suspected Failures.** If you suspect there is damage to this product, have it inspected by qualified service personnel.

**Do Not Operate in Wet/Damp Conditions.**

**Do Not Operate in an Explosive Atmosphere.**

**Keep Product Surfaces Clean and Dry.**

**Provide Proper Ventilation.** Refer to the manual's installation instructions for details on installing the product so it has proper ventilation.

## Symbols and Terms

**Terms in this Manual.** These terms may appear in this manual:

**WARNING.** Warning statements identify conditions or practices that could result in injury or loss of life.

---

**CAUTION.** Caution statements identify conditions or practices that could result in damage to this product or other property.

---

**Terms on the Product.** These terms may appear on the product:

DANGER indicates an injury hazard immediately accessible as you read the marking.

WARNING indicates an injury hazard not immediately accessible as you read the marking.

CAUTION indicates a hazard to property including the product.

**Symbols on the Product.** The following symbols may appear on the product:

WARNING  
High Voltage

Protective Ground  
(Earth) Terminal

CAUTION  
Refer to Manual

Double  
Insulated

# Service Safety Summary

Only qualified personnel should perform service procedures. Read this *Service Safety Summary* and the *General Safety Summary* before performing any service procedures.

**Do Not Service Alone.** Do not perform internal service or adjustments of this product unless another person capable of rendering first aid and resuscitation is present.

**Disconnect Power.** To avoid electric shock, disconnect the mains power by means of the power cord or, if provided, the power switch.

**Use Caution When Servicing the CRT.** To avoid electric shock or injury, use extreme caution when handling the CRT. Only qualified personnel familiar with CRT servicing procedures and precautions should remove or install the CRT.

CRTs retain hazardous voltages for long periods of time after power is turned off. Before attempting any servicing, discharge the CRT by shorting the anode to chassis ground. When discharging the CRT, connect the discharge path to ground and then the anode. Rough handling may cause the CRT to implode. Do not nick or scratch the glass or subject it to undue pressure when removing or installing it. When handling the CRT, wear safety goggles and heavy gloves for protection.

**Use Care When Servicing With Power On.** Dangerous voltages or currents may exist in this product. Disconnect power, remove battery (if applicable), and disconnect test leads before removing protective panels, soldering, or replacing components.

To avoid electric shock, do not touch exposed connections.

**X-Radiation.** To avoid x-radiation exposure, do not modify or otherwise alter the high-voltage circuitry or the CRT enclosure. X-ray emissions generated within this product have been sufficiently shielded.

# Getting Started

# Getting Started

The TSG130A Multiformat Signal Generator is a simple, cost-effective test signal generator designed for the service environment. The TSG130A digitally generates a full complement of test signals in four different formats: NTSC/YC; Y, B-Y, R-Y; Y, CTDM; and GBR.

Table 1–1 lists the test signals available from the TSG130A and Table 1–2 lists what is available from each rear panel output in each of the four modes. The rest of the tables, Tables 1–3 through 1–14 list the special signals and outputs available from each of the various options.

Besides a full complement of video signals in four formats, the TSG130A supplies two channels of a balanced 1 kHz XLR-audio tone with a jumper-selectable ID click. The ID click frequency is also adjustable. See Figures 1–1 and 1–2 for views of the front and rear panels.

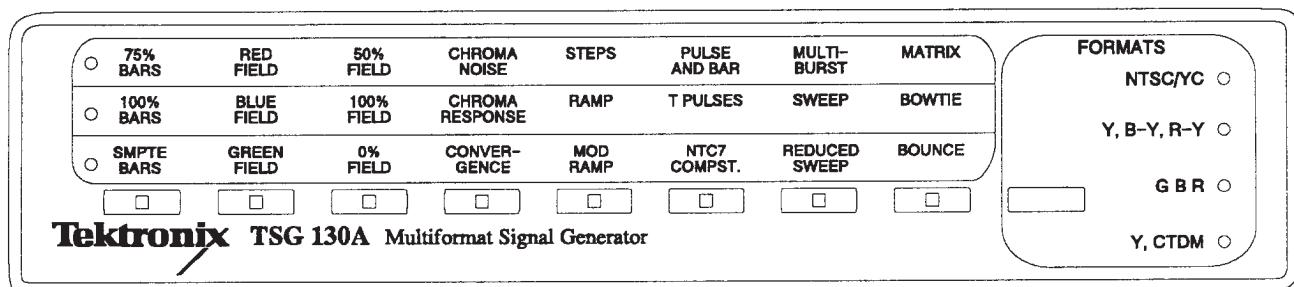

Figure 1–1: TSG130A front panel

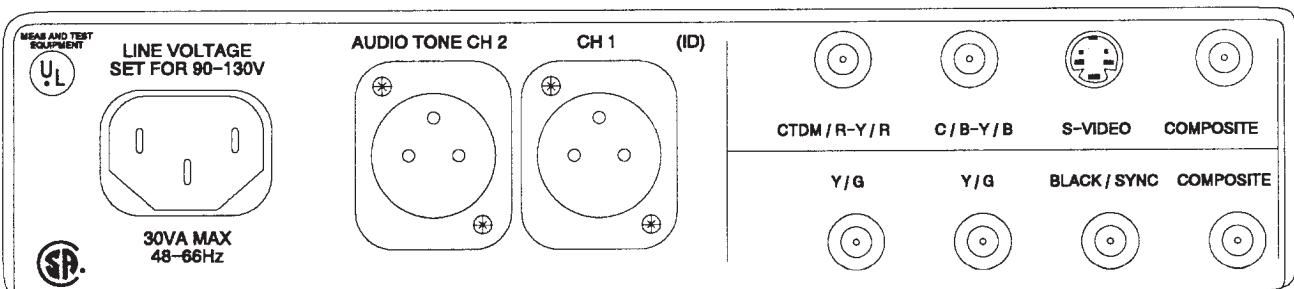

Figure 1–2: TSG130A rear panel

## Configuration Options

A summary of these options is given below and in Table 1–15, which gives a quick comparison between the various options.

For Options 01, 02, 01/02, 2J, 03, 04, and 05 the information needed for the performance check and the adjustment procedures is given along with the standard procedures.

- Option 01** This option changes the component signal format from standard Betacam to MII.
- Option 02** This option adds black burst or composite sync (selectable by internal jumper) from the black/sync output, to the standard instrument.
- Option 2J** The dominant feature of the 2J option is the 0 IRE setup level. It also has black burst or composite sync from the black/sync output and a second black burst or composite sync signal from the CTDM/R-Y/R output. It also has a special Betacam signal set.
- Option 01/02** This option combines Options 01 and 02. The result is an MII component signal set and black burst or composite sync from the black/sync output.
- Option 03** Option 03 has a longer blanking width (11.2  $\mu$ s) and a color flag reference pulse from one of the Y/G outputs. It has a black burst or composite sync output. It also has a custom signal set for both composite and Betacam component signals.
- Option 04** Option 04 has VIR on line 19 and only composite sync from the black/sync output. There is a color frame square wave from one of the Y/G outputs. It also has custom signal sets for both composite and MII component signal sets.
- Option 05** Option 5 combines Option 01/02 and the following six new test signals: 100% Betacam level color bars (Opt 2J), 100% SMPTE level color bars, Chroma noise, Active picture markers, 5 step New, and Shallow ramp. Three signals were added on each of the component/composite matrices. It also has a color flag reference pulse from one of the Y/G outputs.

## Test Signal Summary and Available Outputs

The following tables summarize the test signals and lists the available outputs for each of the options.

**Table 1–1: TSG130A test signal summary, for standard and Option 02 (black burst)**

| Format                                      | 1               | 2           | 3                  | 4                              | 5            | 6                       | 7                 | 8      |
|---|-----------------|-------------|--------------------|--------------------------------|--------------|-------------------------|-------------------|--------|
| <b>NTSC/YC</b>                              | 75% color bars  | Red Field   | 50 IRE flat field  | Chrominance Noise              | 5-step       | Pulse & bar             | Multiburst        | Matrix |
|   | 100% color bars | Green field | 100 IRE flat field | Chrominance frequency response | Ramp         |                         | Sweep             |        |

## Physical Description

The signal generator consists of five circuit boards and five cables in a rectangular sheet-aluminum chassis with a removable top cover. The major internal components are:

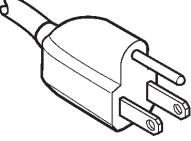

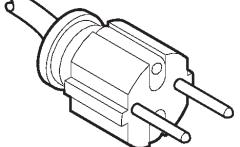

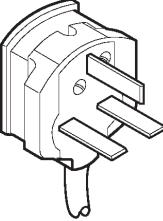

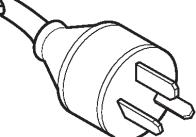

- A main board that performs most of the signal generator's functions.
- A front panel board that decodes front panel button selections.
- A ribbon cable that feeds decoded front panel information to the main board.
- A ribbon cable that supplies signals from the main board to the top BNC connector mounting board.
- Two BNC connector mounting boards: the top board contains one SVHS and three BNC connectors; the bottom board contains four BNC connectors.
- A ribbon cable that supplies signals from the main board to the bottom BNC connector mounting board.

## Power Cord Options

The standard TSG130A power cord is a 120 V, 15 Amp cord equipped with the standard North American three-prong power plug as shown in Table 1–16. The signal generator may be ordered with the other power-cord options shown in table 1–16. These are:

- Option A1, a 220 V, 16 Amp rated power cord with the universal European three-prong power plug.
- Option A2, a 240 V, 15 Amp rated power cord with the United Kingdom three-prong power plug.
- Option A3, a 240 V, 10 Amp rated power cord with the Australian three-prong power plug.

**Table 1–16: Power cord identification**

| Plug configuration  | Normal usage            | Option number |
|---|-------------------------|---------------|
|   | North America<br>115 V  | Standard      |
|  | Europe<br>230 V         | A1            |
|  | United Kingdom<br>230 V | A2            |
|  | Australia<br>230 V      | A3            |

# Operating Basics

# Operating Basics

This section describes the front panel controls, the rear panel connectors, and how to use them.

For information on configuring the internal jumpers see TSG130A Jumper List, Table 7-2.

For information on configuring the power supply for 110 VAC or 220 VAC operation, see *Selecting the Power Supply Mains Voltage*, page 7-1.

**CAUTION.** *The signal generator is shipped from the factory configured for 110 VAC operation. Attempting to operate the signal generator at any other voltage without reconfiguring the power supply may cause damage. Refer to Selecting the Power Supply Mains Voltage for further information.*

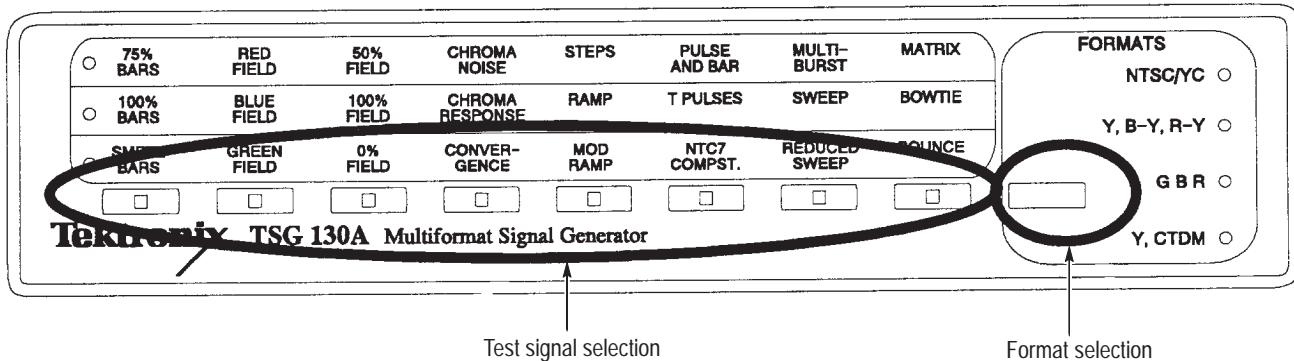

Figure 2-1: TSG130A front panel

## Front Panel Controls

The front panel is organized into two sections. The right section is a format selection area. This area contains the format selection button, which selects one of the four video test signal formats. Pressing the button switches between the formats moving from top to bottom. The signal generator powers on in the NTSC/YC format. An LED indicates the signal format selected.

The left section contains eight test signal selection buttons. Above the buttons are three rows of test signal selections, arranged in columns. On the left side are three LEDs, one for each row. These LEDs indicate the test signal row selected.

There is an LED in the center of each Test Signal Selection button. The button lights to indicate which column is selected. To determine which test signal is selected, use the left LEDs to determine which row and the button to identify the column. See Figure 2–2 for an example.

Pressing a test signal selection button for the first time lights the top-row LED, if the signal format selected (for example, Y, B-Y, R-Y) offers that particular test signal. Successive presses of the same button select other test signals in the column above the button. If a test signal is not available in a selected format, the selection indicator moves to the top of the column or first available signal. If the format is changed and no test signals are offered from that column in the selected format, the indicator moves to 75% bars.

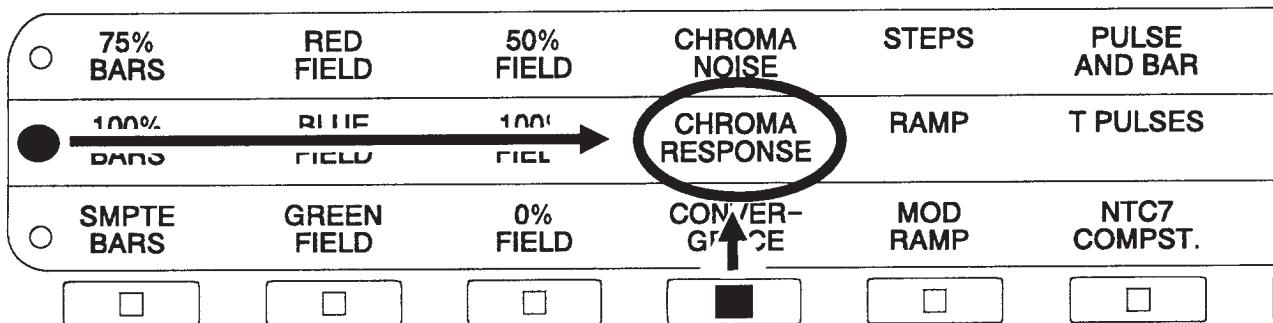

Figure 2–2: Determining the signal selected

## Rear Panel Connections

This section describes the signal generator's rear panel connections (see Figure 2–3).

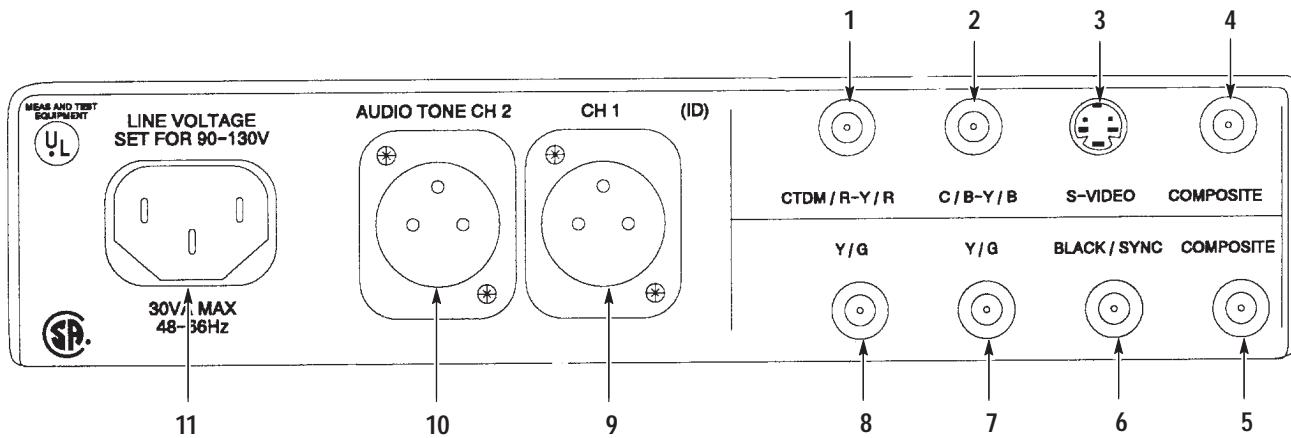

Figure 2–3: TSG130A rear panel

### Multi-purpose outputs

---

**NOTE.** Only the output associated with the active signal set selected from the front panel has a valid signal on it. For example, if NTSC/YC is active there is not a valid signal on the CTDM / R-Y / R output.

---

The rear panel provides the following outputs:

1. R-Y output in Y, B-Y, R-Y format; CTDM output in CTDM format; and red in GBR format.
2. Chrominance output (NTSC/YC format); B-Y output in Y, B-Y, R-Y format; blue in GBR format.
3. Y/C output. The signal generator also offers an S-video output as an alternative to the Y and C outputs.
4. NTSC test signal output (NTSC/YC format only).
5. NTSC test signal output (NTSC/YC format only).
6. Optional output. Not used on the standard instrument. Outputs either black burst or comp sync in Options 01/02, 02, 03, 05, and 3J. Outputs only comp sync for Option 04.

7. Luminance output for all formats except GBR, when it outputs green.  
Outputs only color frame square wave in Option 04. Outputs only color flag reference pulse in Option 03 and Option 05.
8. Luminance output for all formats, except GBR, when it outputs green.

---

**NOTE.** It is recommended that the S-video output not be used simultaneously with the Y and C BNC outputs. Using the S-video output while also using the Y and C BNC outputs will degrade Y-channel output accuracy.

---

**CAUTION.** The audio tone output is only specified to drive a  $600\ \Omega$  or greater impedance. It can run down to  $150\ \Omega$ . Do not use less than  $150\ \Omega$ . Using a lower impedance termination risks damaging the TSG130A.

---

9. 1 kHz audio tone output with jumper-selectable ID click. The frequency of the ID click may be changed, or the click may be disabled. See *Setting the Internal Jumpers* to disable the click and *Adjustment Procedures* to change the frequency.
10. 1 kHz audio tone output in phase with CH 1. The signal generator's audio tone output is a balanced 1 kHz XLR audio tone. Audio output gain is adjustable via internal potentiometers (see *Adjustment Procedures*).

### Power supply

---

**CAUTION.** There is not an ON/OFF switch for the power supply. If the instrument is plugged into a power source it is on.

---

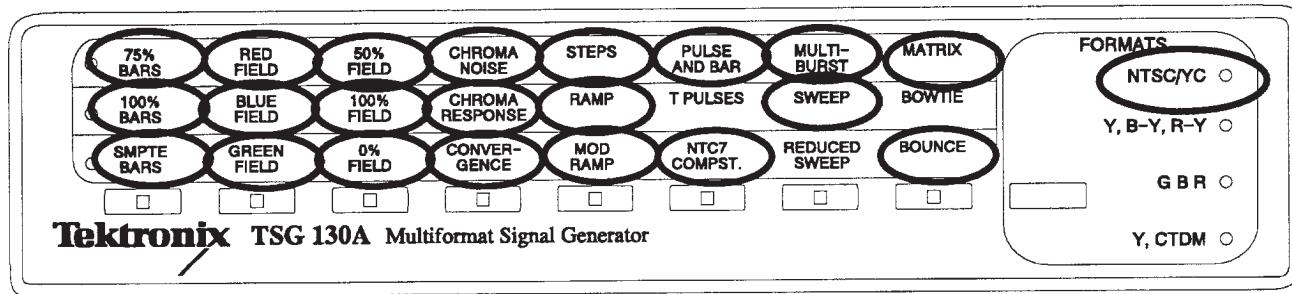

11. Electrical mains input, factory set for 110 VAC (to change the power supply operating voltage, see *Selecting the Power Supply Mains Voltage*).

## Using controls and connectors (standard instrument)

For a designated format, the following figures and tables illustrate test signals available and valid rear panel outputs.

**Table 2-1: NTSC/YC format available signals**

| 1               | 2           | 3                  | 4                              | 5        | 6              | 7          | 8      |
|-----------------|-------------|--------------------|--------------------------------|----------|----------------|------------|--------|
| 75% color bars  | Red field   | 50 IRE flat field  | Chrominance noise              | 5-step   | Pulse & bar    | Multiburst | Matrix |
| 100% color bars | Green field | 100 IRE flat field | Chrominance frequency response | Ramp     |                | Sweep      |        |
| SMPTE bars      | Blue field  | 0 IRE flat field   | Convergence                    | Mod ramp | NTC7 composite |            | Bounce |

# Specifications

# Specifications

Material in this section is organized into two groupings: the specifications and the supporting figures. The specifications include:

1. General test signal specifications for all formats.
2. NTSC/YC general and test signal specifications.
3. Component test signal specifications.
4. GBR test signal specifications.
5. CTDM test signal specifications.
6. Signal level specifications.
7. Power supply, physical, and environmental specifications.

Supporting figures (waveforms and related data) follow the specifications.

## Performance conditions

The performance requirements are valid within the environmental limits if the instrument is adjusted at  $25^{\circ}\text{ C} \pm 5^{\circ}\text{ C}$  and a minimum warmup time of 20 minutes is allowed.

## Safety standards

The following safety standards apply to the signal generator:

**Table 3-1: Certifications and compliances**

| Category                                      | Description  |
|---|--|
| Safety Standards                              |  |
| U.S. Nationally Recognized Laboratory Listing | UL1244 Standard for Electrical and Electronic Measuring and Testing Equipment.   |
| Canadian Certification                        | CAN/CSA C22.2 No. 231 CSA Safety Requirements for Electrical and Electronic Measuring and Test Equipment.  |
| European Union Compliance                     | Low Voltage Directive 73/23/EEC, Amended by 93/68/EEC.<br>EN61010-1 Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use. |
| Additional Compliance                         | IEC1010-1 Safety Requirements for Electrical for Measurement, Control, and Laboratory Use.   |
| Safety Certification Compliance               |  |
| Temperature, operating                        | +5 to +40° C   |
| Altitude (maximum operating)                  | 2000 meters  |
| Equipment Type                                | Test and measuring   |
| Safety Class                                  | Class I (as defined in IEC 1010-1, Annex H) – grounded product   |
| Oversupply Category                           | Oversupply Category II (as defined in IEC 1010-1, Annex J).  |
| Pollution Degree                              | Pollution Degree 2 (as defined in IEC 1010-1).<br>Note: rated for indoor use only.   |

## Electrical characteristics

Betacam component test signals are available on the standard instrument and on the Options 01, 03, and 2J instruments. MII component test signals are available on the Options 01, 04, and 05 instruments.

---

***NOTE.*** All figures referenced in this section are located after the specifications.

---

| Oscillator frequency stability | 14.31818 MHz ±28 Hz<br>Over 5 °C to 35 °C temperature range after 30-minute warmup | Oscillator to be adjusted semiannually (divide by 4 to obtain subcarrier specification) | 1  |

**Table 3-3: General NTSC/YC signal characteristics (NTSC/YC formats only)**

| Characteristics                  | Performance requirements              | Supplemental information          | Performance check step no. |
|----------------------------------|---------------------------------------|-----------------------------------|----------------------------|
| Differential gain                | 0.3% maximum                          | Typical 0.1%                      | 20                         |
| Differential phase               | 0.3° maximum                          | Typical 0.1°                      | 20                         |
| Chrominance-to-luminance gain    | ±1%                                   |                                   | 8                          |
| Chrominance accuracy on C output | ±1%                                   | Measured with chroma noise signal | 7, 32 & 33                 |
| Burst amplitude                  | 285.7 mV <sub>p-p</sub> (40 IRE0 ±2%) |                                   | 4 & 34                     |
| Burst                            |                                       |                                   |                            |
| Delay from sync                  | 5.308 μs ±35 ns                       | 19 subcarrier cycles              |                            |
| Burst duration                   | 2.51 μs 0.1 μs                        | 9 subcarrier cycles               |                            |
| Breezeway duration               | 600 ns ±50 ns                         |                                   |                            |
| SC/H phase                       | 0° ±5°                                |                                   | 21                         |
| Chrominance-to-luminance delay   | ≤12 ns                                |                                   | 8                          |

**Table 3–4: NTSC/YC test signal definitions**

| Characteristics           | Signal definitions                            | Supplemental information    |
|---------------------------|---|-----------------------------|
| 75% bars                  | 75% color bars with 100% flag and 7.5% setup  | See Figures 3–3 and 3–4     |
| Option 2J only            | No 7.5% setup                                 | See Figures 3–165 and 3–166 |
| 100% bars                 | 100% color bars with 7.5% setup               | See Figures 3–7 and 3–8     |
| Option 2J only            | No 7.5% setup                                 | See Figures 3–167 and 3–168 |
| SMPTE bars                | SMPTE bars                                    | See Figures 3–9 to 3–14     |
| Luminance rise time       | 140 ns on color bar luminance                 |                             |
| Option 2J only            | No 7.5% setup                                 | See Figures 3–169 to 3–174  |
| Red field                 |   |                             |
| Luminance pedestal        | 201.74 mV (202.2 mV Option 03)                | See Figures 3–5 and 3–6     |
| Chrominance amplitude     | 626.66 mV <sub>p-p</sub> (630.1 mV Option 03) |                             |
| Chrominance phase         | 103.5° (103.4° Option 03)                     |                             |
| Option 2J only (no setup) |   | See Figures 3–175 and 3–176 |
| Luminance amplitude       | 160.72 mV                                     |                             |
| Chrominance amplitude     | 681.18 mV                                     |                             |
| Green field               |   |                             |
| Luminance pedestal        | 344.5 mV (345.9 mV Option 03)                 | See Figures 3–21 and 3–22   |
| Chrominance amplitude     | 585.28 mV <sub>p-p</sub> (588.5 mV Option 03) |                             |
| Chrominance phase         | 240.7° (240.7° Option 03)                     |                             |
| Option 2J only (no setup) |   | See Figures 3–177 and 3–178 |
| Luminance amplitude       | 316.08 mV                                     |                             |
| Chrominance amplitude     | 626.26 mV                                     |                             |
| Blue field                |   |                             |
| Luminance pedestal        | 110.06 mV (108.1 mV Option 03)                | See Figures 3–19 and 3–20   |
| Chrominance amplitude     | 443.76 mV <sub>p-p</sub> (444.2 mV Option 03) |                             |
| Chrominance phase         | 347.1°  |                             |
| Option 2J only (no setup) |   | See Figures 3–179 and 3–180 |
| Luminance amplitude       | 58.83 mV                                      |                             |
| Chrominance amplitude     | 480.24 mV                                     |                             |
| Flat field                |   |                             |
| 50%                       | 357.14 mV (50 IRE)                            | See Figures 3–25 and 3–26   |
| 100%                      | 714.29 mV (100 IRE)                           | See Figures 3–27 and 3–28   |
| 0%                        | 0 mV (0 mV)                                   | See Figures 3–23 and 3–24   |

**Table 3-4: NTSC/YC test signal definitions (cont.)**

| Characteristics  | Signal definitions  | Supplemental information   |
|--|---|--|
| Chrominance noise  |   |  |
| Luminance pedestal   | 357.14 mV   | See Figures 3-29 and 3-30  |
| Chrominance amplitude  | 714.29 mV <sub>p-p</sub>  |  |
| Chrominance phase  | 103.5° (red)<br>(60.8° magenta, Option 03)  |  |
| Chrominance response, C-channel output<br>(Options 03 & 04 only)                                     | 2.58 MHz to 4.58 MHz  | Option 03, see Figures 3-202, 3-203, and 3-204<br>Option 04, see Figures 3-234, 3-233, and 3-232         |
| Chrominance frequency response,<br>C-channel output (Standard, Options 01,<br>02, 01/02, 05, and 2J) | Five frequency packets: 3.08 MHz, 3.33 MHz,<br>3.58 MHz, 3.83 MHz, 4.08 MHz   | See Figure 3-17 and 3-18   |
| Convergence amplitude<br>Convergence pattern pulse HAD   | 549.1 mV (76.9 IRE)<br>225 ns   | See Figures 3-43 to 3-45 (for Option 03, see Figures 3-207 and 3-208) 14 lines/field, 17 lines/vertical  |
| 5-step amplitude (grayscale)   | 714.29 mV (100 IRE)   | See Figures 3-33 and 3-34 (for Option 03, see Figures 3-196 and 3-197)                                   |
| Ramp/modulated ramp  |   |  |
| Luminance amplitude  | 714.29 mV (100 IRE)   | See Figures 3-35 to 3-38 (Option 03, see Figures 3-198 to 3-201; Option 04, see Figures 3-230 and 3-231) |
| Option 04 modulated ramp   | 571.43 mV (80 IRE)  |  |
| Chrominance amplitude  | 285.7 mV <sub>p-p</sub> (40 IRE)  |  |
| Pulse & bar window   |   |  |
| 2T pulse HAD   | 250 ns  | See Figures 3-31 and 3-32  |
| White bar amplitude  | 100 IRE   |  |
| Window field timing  | Lines 72 – 202  |  |
| NTC7 composite   | 100 IRE bar (with 125 ns rise time), 2T and 12.5T mod pulse, 90 IRE 5-step staircase modulated with 40 IRE subcarrier | See Figures 3-15 and 3-16  |
| Multiburst   |   | See Figures 3-39 and 3-40  |
| White reference bar amplitude  | 500 mV <sub>p-p</sub> (70 IRE)  |  |
| Packet amplitudes  | 428.6 mV <sub>p-p</sub> (60 IRE)  | Equal width packets  |
| Pedestal   | 285.7 mV (40 IRE)   |  |
| Pedestal   | 0.5, 1.0, 2.0, 3.0, 3.58, and 4.2 MHz   |  |
| Packet frequencies   |   |  |
| Packet rise time 0.5 MHz   |   | 140 ns typical ( $\sin^2$ shaped packets)  |
| Other packets  |   | 400 ns typical ( $\sin^2$ shaped packets)  |

**Table 3–4: NTSC/YC test signal definitions (cont.)**

| Frequencies                | 0.5, 1, 2, 3, 4, and 5 MHz               |                                 |

**Table 3-7: Test signal generator GBR-format test signals (cont.)**

| Characteristics    | Signal definitions  | Supplemental information                                       |
|--------------------|---|--|
| 100% line sweep    |   | See Figures 3-115 and 3-116                                    |
| Amplitude          | 700 mV  |  |
| Frequency range    | 200 kHz – 5.5 MHz   |  |
| Markers            |   | 0.5, 1, 2, 3, 4, 5, and 5.5 MHz                                |
| Bowtie             |   | See Figures 3-117 to 3-120                                     |
| G channel          | 500 kHz sine wave   |  |
| B channel          | 502 kHz sine wave   |  |
| R channel          | 502 kHz sine wave   |  |
| Channel amplitudes | 350 mV (all channels)                                     |  |
| Timing markers     | 11 timing markers   | Marker spacing indicates 20 ns delay/advance between channels. |
| Convergence        |   | See Figures 3-105 to 3-108                                     |
| Amplitude          | 525 mV (75%)  |  |
| Pattern            | Crosshatch 14 horizontal and 15 vertical lines per field. |  |

**Table 3-8: Black burst output (Options 02, 03, 2J, and 05)**

| Characteristics | Performance requirements                          | Supplemental information  | Performance check step no. |
|-----------------|---|---|----------------------------|
| Black amplitude | 7.5 IRE $\pm 1$ IRE 0 IRE $\pm 1$ IRE (Option 2J) |   | 65                         |
| Blanking width  | 10.9 $\mu$ s $\pm 0.2$ $\mu$ s                    |   | 66                         |
| Sync timing     |   | See Figure 3-1 Options 01/02, 02, & 03. See Figure 3-2 Option 2J. |                            |

**Table 3-9: Audio tone characteristics**

| Characteristics                              | Performance requirements      | Supplemental information  | Performance check step no. |
|--|-------------------------------|---|----------------------------|
| Amplitude                                    | 0 to +8 dBu adjustable        | Balanced XLR impedance to drive 600 $\Omega$ or high-impedance load |                            |
| Frequency                                    |                               |   |                            |
| Distortion (THD)                             | $\leq 0.5\%$ THD              |   | 64                         |
| Audio ID click frequency range (one channel) | Rate adjustable 0.2 Hz – 4 Hz |   |                            |

**Table 3–10: Composite sync output (Options 02, 03, 04, 2J, 01/02, and 05)**

| Characteristics     | Performance requirements              | Supplemental information      | Performance check step no. |
|---------------------|---------------------------------------|-------------------------------|----------------------------|
| Duration            |                                       |                               | 67                         |
| Horizontal sync     | $4.7 \mu\text{s} \pm 100 \text{ ns}$  |                               |                            |
| Vertical serrations | $4.7 \mu\text{s} \pm 100 \text{ ns}$  |                               |                            |
| Equalizing pulses   | $2.35 \mu\text{s} \pm 100 \text{ ns}$ |                               |                            |
| Amplitude           | $-4.0 \pm 0.5 \text{ V}$              |                               | 68                         |
| Rise and fall times | $140 \text{ ns} \pm 20 \text{ ns}$    |                               | 69                         |
| Impedance           |                                       | $75 \Omega$                   |                            |
| Return loss         |                                       | $\geq 30 \text{ dB}$ to 5 MHz |                            |

**Table 3–11: Power supply specifications**

| Characteristics            | Performance requirements | Supplemental information                          |
|----------------------------|--------------------------|---|
| Supply accuracy            |                          |   |
| +5 V                       |                          | $+5 \text{ V} \pm 250 \text{ mV}$                 |
| -5.2 V                     |                          | $-5.2 \text{ V} +300 \text{ mV}, -500 \text{ mV}$ |
| -10 V                      |                          | $-10 \text{ V} \pm 600 \text{ mV}$                |
| Power limit                |                          | 18 Watts  |
| Hum                        |                          | Typical   |
| +5 V                       |                          | 10 mV   |
| -5.2 V                     |                          | 20 mV   |
| -10 V                      |                          | 10 mV   |
| Noise                      |                          |   |
| +5 V                       |                          | $\leq 50 \text{ mV}$ (5 MHz bandwidth)            |
| -5.2 V                     |                          | $\leq 50 \text{ mV}$ (5 MHz bandwidth)            |
| -10 V                      |                          | $\leq 50 \text{ mV}$ (5 MHz bandwidth)            |
| Line voltage range         |                          |   |
| 115 VAC                    |                          | 90 – 130 VAC                                      |
| 240 VAC                    |                          | 180 – 250 VAC                                     |
| Fuse data                  |                          |   |
| 110 V setting              |                          | 0.5 A, 250 V med. blow                            |
| 230 V setting              |                          | 0.25 A, 250 V med. blow                           |
| Power consumption, typical |                          | 15 Watts  |
| Line frequency             |                          | 48 – 62 Hz  |

## Specifications

---

**Table 3–12: Physical characteristics**

| Characteristics | Supplemental information |
|-----------------|--------------------------|
| Dimensions      |                          |
| Height          | 43.4 mm (1.71 in)        |
| Width           | 205.7 mm (8.1 in)        |
| Length          | 381.0 mm (15.0 in)       |
| Net weight      | 1.47 kg (4 lbs, 6 oz)    |
| Shipping weight | 3.2 kg (7 lbs, 1 oz)     |

**Table 3–13: Environmental characteristics**

| Characteristics       | Supplemental information   |
|-----------------------|--|
| Temperature           |  |
| Non-operating         | –40 to +65 °C  |
| Operating             | 0 to +35 °C  |
| Altitude              |  |
| Non-operating         | To 50,000 feet   |
| Operating             | To 15,000 feet   |
| Vibration (operating) | 5 minutes each axis at 0.060 inch, with frequency varied from 5–15–5 cycles per second, with instrument secured to vibration platform.<br>5 minutes each axis at 0.020 inch, with frequency varied from 25–55–25 cycles per second, with instrument secured to vibration platform.<br>5 minutes each axis at 0.040 inch, with frequency varied from 15–25–15 cycles per second, with instrument secured to vibration platform.<br>Ten minutes each axis at any resonant point, or at 33 cycles per second. |
| Shock                 | 50 g, half sine, 11 ms duration, 3 guillotine-type shocks per side.  |
| Transportation        | Qualified under NTSB Test Procedure 1A, Category II (24-inch drop).  |

**Table 3–14: Certifications and compliances**

|  |   |
|--|---|
| EC Declaration of Conformity – EMC             | <p>Meets intent of Directive 89/336/EEC for Electromagnetic Compatibility. Compliance was demonstrated to the following specifications as listed in the Official Journal of the European Communities:</p> <p><b>EN 50081-1 Emissions:</b><br/>EN 55022 Class B Radiated and Conducted Emissions</p> <p><b>EN 50082-1 Immunity:</b><br/>IEC 801-2 Electrostatic Discharge Immunity<br/>IEC 801-3 RF Electromagnetic Field Immunity<br/>IEC 801-4 Electrical Fast Transient/Burst Immunity</p> <p>Good quality shielded cables must be used to ensure conformity to above listed EMC standards.</p> |
| EMC Compliance                                 | Meets the intent of Directive 89/336/EEC for Electromagnetic Compatibility when it is used with the product(s) stated in the specifications table. Refer to the EMC specification published for the stated products. May not meet the intent of the Directive if used with other products.  |
| FCC Compliance                                 | Emissions comply with FCC Code of Federal Regulations 47, Part 15, Subpart B, Class A Limits  |
| EC Declaration of Conformity – Low Voltage     | <p>Compliance was demonstrated to the following specification as listed in the Official Journal of the European Communities:</p> <p>Low Voltage Directive 73/23/EEC</p> <p>EN 61010-1:1993 Safety requirements for electrical equipment for measurement, control, and laboratory use</p>  |
| Approvals                                      | <p>UL3111-1 – Standard for electrical measuring and test equipment</p> <p>CAN/CSA C22.2 No. 1010.1 – Safety requirements for electrical equipment for measurement, control and laboratory use</p>   |
| Safety Certification of Plug-in or VXI Modules | <p>For modules (plug-in or VXI) that are safety certified by Underwriters Laboratories, UL Listing applies only when the module is installed in a UL Listed product.</p> <p>For modules (plug-in or VXI) that have cUL or CSA approval, the approval applies only when the module is installed in a cUL or CSA approved product.</p>  |
| Installation Category Descriptions             | <p>Terminals on this product may have different installation category designations. The installation categories are:</p> <p>CAT III Distribution-level mains (usually permanently connected). Equipment at this level is typically in a fixed industrial location</p> <p>CAT II Local-level mains (wall sockets). Equipment at this level includes appliances, portable tools, and similar products. Equipment is usually cord-connected</p> <p>CAT I Secondary (signal level) or battery operated circuits of electronic equipment</p>   |

## Waveform Illustrations

In the following illustrations, time is referenced to the half-amplitude point (or a pulse peak) unless otherwise specified.

TSG130A Simplified block diagram

## Block Diagram

# Performance Verification

# Performance Check Procedures

This section consists of checklists and detailed procedures that can be used to check the performance of the TSG130A against specifications.

Table 5–1 is a list of equipment and corresponding performance requirements needed for the following performance check procedures.

**Table 5–1: Equipment for performance check and adjustment procedure**

| Equipment                              | Required capabilities  | Example equipment   |
|--|--|---|
| NTSC video measurement set             | Measures and displays field-rate and line-rate waveforms, differential phase and gain, and SC/H phase.   | Tektronix 1780R Video Measurement Set.  |
| Frequency counter                      | Accurate to within 2.5 Hz out of 5 MHz.  | Tektronix DC 503A, plugs into a TM 503A Power Mainframe.  |
| Distortion analyzer                    | Must test power output over 0 to 8 dBm and be capable of detecting THD of 0.01% or less.   | Tektronix AA501A.   |
| Audio amplifier                        | 600 Ω impedance  |   |
| BNC coaxial cables (5)                 | 75 Ω impedance.  | Tektronix part number 012-0074-00. Note that it is imperative that all the cable lengths match. |
| End-line terminations (5)              | 75 Ω terminations equipped with a BNC connector.   | Tektronix part number 011-0102-00.  |
| Audio connector-to-triple banana cable | Must be configured to match TSG 130A audio output. Pin 1 shield; pin 2 +; pin 3 –  | Example: ITT Pamona Electronics, Model 4953-J-36.   |
| Test oscilloscope and 1x probe         | This is needed only if Options 01/02, 02, 2J, 03, or 04 are installed. Any oscilloscope must have these minimum capabilities: 50 MHz bandwidth, 5 ns/div to 5 μs/div sweep speeds and triggering to 5 MHz. | Tektronix 2430A Oscilloscope, 1x probe P6101A.  |
| S-video breakout cable                 | To convert S-video to separate Y and C signals.  | Panasonic AG-C70 or Laird 103 Y/C   |
| Pozidriv® screwdriver tips             | For removing audio board.  | General Tool 640-121 (small tip), 640-122 (medium tip), 624-440 (hex driver)                    |

---

**NOTE.** It is very important for both performance checks and adjustment procedures that length and propagation delay of the coax cables are identical.

---

## Performance Check Checklist

This section provides a performance checklist for the signal generator.

### Oscillator Frequency

1. Oscillator frequency 14.31818 MHz  $\pm 28$  Hz

---

**NOTE.** After initial delivery or long storage, allow a two-hour warm up to re-age the crystal. Thereafter, a 30-minute warm up is sufficient.

---

### Composite Test Signal

2. Blanking level: 0 mVDC  $\pm 50$  mVDC
3. Sync amplitude: 285.7 mV (40 IRE)  $\pm 2\%$
4. Burst amplitude: 285.7 mV (40 IRE)  $\pm 2\%$
5. 5-step staircase linearity: <1%
6. Luminance amplitude accuracy:  $\pm 1\%$
7. Chrominance accuracy:  $\pm 1\%$
8. Chrominance-to-luminance delay and gain:  $\leq 12$  ns  $\pm 1\%$
9. Line tilt:  $\pm 0.5\%$
10. Field tilt:  $\pm 0.5\%$
11. Ringing:  $K_{2T}$  factor <0.6%,  $\leq 1\%$  of peak
12. Pulse-to-bar ratio: 1:1  $\pm 1\%$
13. Sine-squared pulse accuracy: HADs accurate within 25 ns
14. Line sync duration: 4.7  $\mu s$   $\pm 50$  ns
15. Sync rise times: 140 ns  $\pm 20$  ns
16. Luminance rise times: 250 ns  $\pm 25$  ns
17. Horizontal sync duration, vertical serration duration, equalizing pulse duration: sync = 4.7  $\mu s$   $\pm 50$  ns; vertical serration = 4.7  $\mu s$   $\pm 50$  ns; equalizing pulse = 2.3  $\mu s$   $\pm 50$  ns

- Y Channel (Luminance) Output**
- 18. Line blanking interval:  $10.9 \mu\text{s} \pm 200 \text{ ns}$
  - 19. Frequency response: flat to  $4.2 \text{ MHz} \pm 2\%$
  - 20. Differential phase and gain:  $0.3^\circ$  &  $0.3\%$  maximum
  - 21. SC/H phase:  $0^\circ \pm 5^\circ$
  - 22. Blanking level:  $0 \text{ mVDC} \pm 50 \text{ mVDC}$
  - 23. Sync amplitude:  $285.7 \text{ mV} \pm 2\%$  ( $300.0 \text{ mV} \pm 2\%$  for MII 3-wire signals)
  - 24. Line sync duration:  $4.7 \mu\text{s} \pm 50 \text{ ns}$ ;  $5.0 \mu\text{s} \pm 50 \text{ ns}$  for 2-wire Betacam
  - 25. 5-step staircase linearity:  $<1\%$
  - 26. Line time distortion (line tilt):  $<0.5\%$
  - 27. Field time distortion (field tilt):  $<0.5\%$
  - 28. Ringing:  $K_{2T}$  factor  $<0.6\%$ ,  $\leq 1\%$  of peak
  - 29. Pulse-to-bar ratio:  $1:1 \pm 1\%$
  - 30. Sine squared pulse accuracy: HADs accurate within 25 ns
  - 31. Horizontal sync duration, vertical serration duration, equalizing pulse duration: sync =  $4.7 \mu\text{s} \pm 50 \text{ ns}$ ; vertical serration =  $4.7 \mu\text{s} \pm 50 \text{ ns}$ ; equalizing pulse =  $2.3 \mu\text{s} \pm 50 \text{ ns}$
- C Channel (Chrominance)**
- 32. Chrominance response:  $\pm 1\%$
  - 33. Chrominance amplitude:  $\pm 1\%$
  - 34. Burst amplitude:  $285.7 \text{ mV}_{\text{p-p}} (40 \text{ IRE}) \pm 2\%$
  - 35. Burst rise times:  $400 \text{ ns} \pm 40 \text{ ns}$
  - 36. Chrominance rise times:  $400 \text{ ns} \pm 40 \text{ ns}$
- B-Y Signals**
- 37. B-Y blanking level:  $0 \text{ mVDC} \pm 50 \text{ mVDC}$
  - 38. B-Y rise times: color bars  $400 \text{ ns} \pm 40 \text{ ns}$ ; other signal transitions  $250 \text{ ns} \pm 25 \text{ ns}$
  - 39. B-Y sine squared pulse accuracy: HADs accurate within 25 ns
- R-Y Signals**
- 40. Blanking level:  $0 \text{ mVDC} \pm 50 \text{ mVDC}$
  - 41. R-Y rise times: color bars  $400 \text{ ns} \pm 40 \text{ ns}$ ; other signal transitions  $250 \text{ ns} \pm 25 \text{ ns}$
  - 42. R-Y sine squared pulse accuracy: HADs accurate within 25 ns

**Green Channel**

**NOTE.** Before using the GBR signal format, check that the green channel has sync enabled. If there is no sync on the green signal, move jumper J123 to the 2–3 position.

---

43. Amplitude accuracy:  $\pm 1\%$
44. Green frequency response: flat to 5.0 MHz  $\pm 1\%$ ; flat to 5.5 MHz  $\pm 2\%$
45. Sync amplitude: 300.0 mV  $\pm 2\%$

**Blue Channel**

46. Blue gain:  $\pm 1\%$
47. Blue frequency response: flat to 5.0 MHz  $\pm 1\%$ ; flat to 5.5 MHz  $\pm 2\%$
48. Blue staircase linearity:  $< 1\%$
49. Line tilt:  $\pm 0.5\%$
50. Field tilt:  $\pm 0.5\%$
51. Pulse-to-bar ratio: 1:1  $\pm 1\%$

**Red Channel**

52. Red frequency response: flat to 5.0 MHz  $\pm 1\%$ ; flat to 5.5 MHz  $\pm 2\%$
53. Staircase linearity:  $< 1\%$
54. Red gain:  $\pm 1\%$
55. Line tilt:  $\pm 0.5\%$
56. Field tilt:  $\pm 0.5\%$
57. Pulse-to-bar ratio: 1:1  $\pm 1\%$

**Inter-Channel Timing and Amplitude**

58. B-Y to Y timing: within 5 ns
59. R-Y to Y timing: within 5 ns
60. GBR amplitude matching:  $\pm 0.5\%$

**S-Video Output**

61. S-video frequency response: 4.2 MHz  $\pm 2\%$

**Audio Outputs**

62. Total harmonic distortion:  $\leq 0.5\% \text{ THD}$

**Black Burst Output  
(Options 01/02, 02, 03, 2J)**

63. Black burst amplitude: 7.5 IRE  $\pm 1$  IRE; 0 IRE  $\pm 1$  IRE (Option 2J)
64. Black burst blanking width:  $10.9 \pm 2 \mu\text{s}$

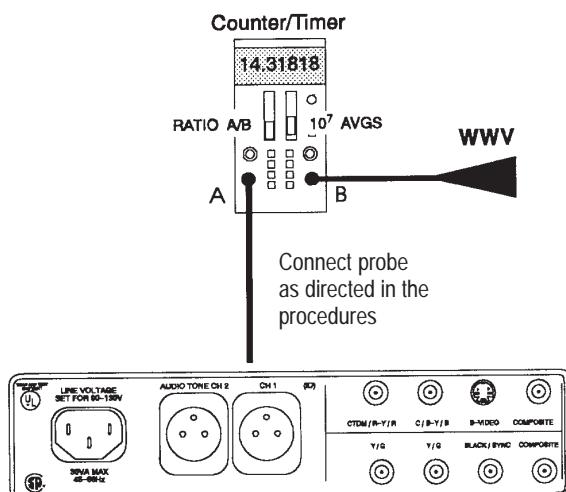

- Composite Sync (Options 01/02, 02, 03)**
- 65. Duration: horizontal sync =  $4.7 \mu\text{s} \pm 50 \text{ ns}$ ; vertical serration =  $4.7 \mu\text{s} \pm 50 \text{ ns}$ ; equalizing pulse =  $2.3 \mu\text{s} \pm 50 \text{ ns}$
  - 66. Amplitude:  $-4.0 \text{ V} \pm 0.5 \text{ V}$
  - 67. Rise and fall times:  $140 \text{ ns} \pm 20 \text{ ns}$
- Color Flag Reference Pulse (Option 03)**
- 68. Amplitude and position
- Color Frame Square Wave (Option 04)**
- 69. Amplitude and position

## Performance Check Procedures

The order of these procedures has been chosen to minimize changes in equipment setup. Performance parameters may be checked in any order. However, because many adjustment steps are interactive, care must be taken when adjusting individual parameters to ensure that all others remain within specification.

### Oscillator Frequency

Figure 5–1 shows the setup for this procedure.

**Figure 5–1: Setup to check crystal frequency**

1. Oscillator Frequency:  $14.31818 \text{ MHz} \pm 28 \text{ Hz}$

---

**NOTE.** After initial delivery or long storage, allow a two-hour warm up to re-age the crystal. Thereafter, 30 minutes warm up is sufficient.

---

- a. Connect the equipment as shown in Figure 5–1, attaching the probe to W151.
- b. Set the frequency counter to count using ratio A/B.
- c. CHECK that the measured oscillator frequency is  $14.31818 \text{ MHz} \pm 28 \text{ Hz}$  at room temperature.

The following table lists the suggested Tektronix 1780R setup for the performance checks.

Table 5–2: Basic 1780 setup

| Configure      |     |
|----------------|-----|
| Coupling       | DC  |
| Vector Grat    | INT |
| WFM Grat       | INT |
| ABS Units      | mV  |
| Vector readout | ON  |
| WFM readout    | ON  |

| Front panel    |          |
|----------------|----------|
| Left display   | VECT     |
| Right display  | WFM      |
| WFM horizontal | ONE/LINE |
| REF            | INT      |
| Filter         | FLAT     |
| Waveform gain  | OFF      |

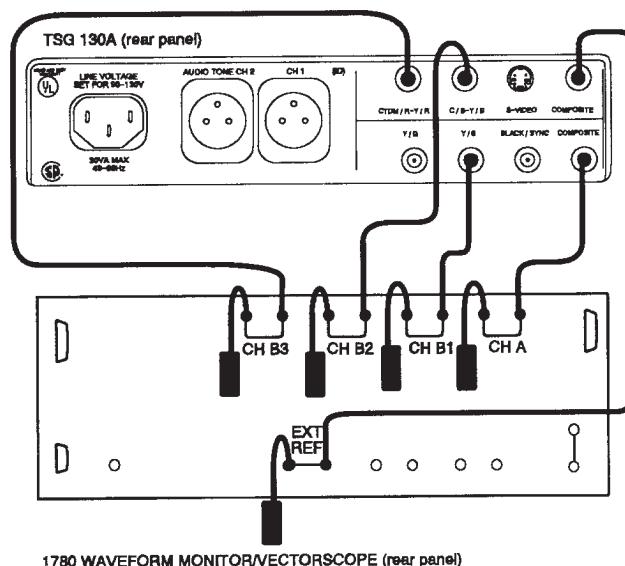

Figure 5–2: Basic performance check setup

**NOTE.** If the TSG130A being checked has an optional black burst signal, use that signal as the waveform monitor's EXT REF input.

**Composite Test Signal**

2. Blanking level: 0 mVDC  $\pm 50$  mVDC
  - a. Connect the equipment as shown in Figure 5–2.
  - b. Display CH A on the waveform monitor.
  - c. Select the steps (5-step) signal in NTSC/YC format from the signal generator.
  - d. Confirm that any DC-restorer feature of the waveform monitor is off.
  - e. Switch the display from DC coupled to ground reference.
  - f. Use the vertical-position adjustment of the waveform monitor to set the ground line to a convenient reference graticule.
  - g. Return to DC coupling.
  - h. CHECK that the blanking level is on the reference graticule  $\pm 50$  mV.
3. Sync amplitude: 285.7 mV (40 IRE)  $\pm 2\%$ 
  - a. Connect the test equipment as shown in Figure 5–2.
  - b. Display CH A on the waveform monitor.
  - c. Select the steps (5-step) signal in NTSC/YC format from the signal generator.
  - d. With the WFM + CAL function of the measurement set match the DC level of the lower waveform to the sync tip of the upper waveform.
  - e. CHECK that the sync amplitude is 285.7 mV  $\pm 5.7$  mV (40 IRE  $\pm 0.8$  IRE).
4. Burst amplitude: 285.7 mV (40 IRE)  $\pm 2\%$ 
  - a. Connect the test equipment as shown in Figure 5–2.
  - b. Select any signal from the signal generator in the NTSC/YC format.
  - c. Display CH A on the waveform monitor in WFM + CAL mode.
  - d. If necessary, adjust the measurement set to match the top of the lower burst to the bottom of the upper burst.
  - e. CHECK for a burst amplitude of 285.7 mV  $\pm 5.7$  mV (40 IRE  $\pm 0.8$  IRE).
5. Steps (5-step) staircase linearity  $<1\%$ 
  - a. Connect the test equipment as shown in Figure 5–2.
  - b. Display CH A on the waveform monitor.

- c. With the steps (5-step) signal selected in the NTSC/YC format, set the test equipment to view the signal through the differentiated step filter.
  - d. CHECK using the voltage cursors, that the difference between the highest and lowest spikes (differentiated steps) is <1%.
6. Luminance amplitude accuracy:  $\pm 1\%$ 
    - a. Connect the test equipment as shown in Figure 5–2.
    - b. Display CH A on the waveform monitor.
    - c. Select the 100% Field signal in NTSC/YC format from the signal generator.
    - d. Put the waveform monitor in WFM + CAL mode.
    - e. Set the test equipment to match the top of the lower waveform with the DC level of the upper waveform.
    - f. CHECK that the signal amplitude is 100 IRE  $\pm 1$  IRE.
    - g. Note the value for use in step 8.
  7. Chrominance accuracy:  $\pm 1\%$ 
    - a. Connect the test equipment as shown in Figure 5–2, keeping the waveform monitor in WFM + CAL.
    - b. Display CH A on the waveform monitor.
    - c. Select the CHROMA NOISE signal from the signal generator in NTSC/YC format.
    - d. Adjust the test equipment to match the top of the lower waveform with the blanking level of the upper.
    - e. CHECK that the signal amplitude is 100 IRE  $\pm 1$  IRE.
    - f. Note the value for use in step 8.
  8. Chrominance-to-luminance delay and gain:  $\leq 12 \text{ ns} \pm 1\%$ 
    - a. Connect the test equipment as shown in Figure 5–2.
    - b. Display CH A on the waveform monitor.
    - c. Select the Pulse & Bar signal in NTSC/YC format from the signal generator.
    - d. Set the waveform monitor to view the bottom of the 12.5T modulated pulse.

- e. Use the Chroma/Luma measurement mode of the Tektronix 1780R to measure both C/Y delay and gain.
  - f. CHECK that the delay is <12 ns and the gain is <1%.
  - g. Compare the measured values for luminance amplitude (from part 6) and chrominance amplitude (from part 7).
  - h. CHECK that these numbers are equal within 1 IRE (1%).
  - i. Use whichever value is greater (from part f or part h) for the C/Y gain.
9. Line tilt:  $\pm 0.5\%$
- a. Connect the test equipment as shown in Figure 5–2.
  - b. Display CH A on the waveform monitor.
  - c. Select the 100% Field signal in NTSC/YC format from the signal generator.
  - d. If necessary, normalize the signal gain so that blanking level of the waveform is on the baseline and the top of the signal passes through 100 IRE at its midpoint.
  - e. Center the signal over a horizontal graticule.
  - f. CHECK that the line tilts no more than 0.5% ( $0.5 \text{ IRE}_{\text{p-p}}$ ) over its length. Ignore the first and last microsecond of the bar.
10. Field tilt:  $\pm 0.5\%$
- a. Connect the test equipment as shown in Figure 5–2.
  - b. Display CH A on the waveform monitor.
  - c. Select the 100% Field signal in the NTSC/YC format from the signal generator.
  - d. Set the test equipment to view one field of the signal.
  - e. CHECK that the field bar tilts no more than 0.5% ( $0.5 \text{ IRE}_{\text{p-p}}$ ) over its length. Ignore the first and last 3 lines of the signal.
11. Ringing:  $K_{2T}$  factor  $<0.6\% \leq 1\%$  of peak
- a. Connect the test equipment as shown in Figure 5–2.
  - b. With the signal generator's Pulse & Bar in NTSC/YC format still selected, set the waveform monitor to display the 2T pulse.
  - c. Use the 1780R's K-factor measurement mode to measure the K Factor of the 2T pulse.

- d. CHECK that the K factor is <0.6%.
- e. CHECK using the voltage cursors or graticule, that the ringing is <1% (1 IRE<sub>p-p</sub>).

**12. Pulse-to-bar ratio: 1:1 ±1%**

- a. Connect the test equipment as shown in Figure 5–2.
- b. Display CH A on the waveform monitor.
- c. Select the Pulse & Bar signal in NTSC/YC format from the signal generator.
- d. Set the waveform monitor to display the tip of the inverted pulse of the pulse and bar signal.
- e. CHECK that the inverted pulse tip is within 1% of blanking level, using the WFM + CAL signal.

**13. Sine squared pulse accuracy: HADs accurate within 25 ns**

- a. Connect the test equipment as shown in Figure 5–2.
- b. Display CH A on the waveform monitor in the line display mode.
- c. Set the waveform monitor to display the 2T pulse on the pulse and bar signal in NTSC/YC format.
- d. Use the variable gain control to normalize the pulse to 100 IRE and use the horizontal magnification to make the pulse fill the waveform monitor display.
- e. Using the timing cursors, measure the time between the 50 IRE points.
- f. CHECK that the HAD of the 2T pulse is 250 ns ±25 ns.

**14. Line sync duration: 4.7 µs ±50 ns**

- a. Connect the test equipment as shown in Figure 5–2.
- b. Display CH A on the waveform monitor in the line display mode.
- c. Set the waveform monitor to display the sync on any signal generator test signal in NTSC/YC format.
- d. Use the variable gain control to normalize the sync to 100 IRE and set the top and bottom of the sync to 100 and 0 IRE respectively.
- e. Using the timing cursor, measure the time from the 50 IRE points of the sync.
- f. CHECK that the sync duration is 4.7 µs ±50 ns.

**15.** Sync rise times:  $140\text{ ns} \pm 20\text{ ns}$

- a.** Connect the test equipment as shown in Figure 5–2.
- b.** Display CH A on the waveform monitor.
- c.** Set the waveform monitor to display the sync on any signal generator test signal in NTSC/YC format.
- d.** Identify the 10% and 90% points of the sync transitions. This can be done with voltage cursors or graticule, and may be aided by using variable gain to normalize the sync to 100 IRE.
- e.** CHECK - that rise time between 10% and 90% are  $140\text{ ns} \pm 20\text{ ns}$ , using the timing cursors.

**16.** Luminance rise times:  $250\text{ ns} \pm 25\text{ ns}$

- a.** Connect the test equipment as shown in Figure 5–2.
- b.** Set the signal generator to output the 100% field signal in the NTSC/YC format.
- c.** Display CH A on the waveform monitor.
- d.** Set the waveform monitor to display the rise from 0 – 100 IRE.
- e.** Use the variable vertical gain to normalize the signal to 0 – 100 IRE and use the horizontal magnification to display the rise on the waveform monitor.
- f.** Use the timing cursors to measure the rise time from the 10 IRE graticule to the 90 IRE graticule.
- g.** CHECK that rise time is between  $250\text{ ns} \pm 25\text{ ns}$ .

**17.** Horizontal sync duration, vertical serration duration, equalizing pulse duration: sync =  $4.7\text{ }\mu\text{s} \pm 50\text{ ns}$ ; vertical serration =  $4.7\text{ }\mu\text{s} \pm 50\text{ ns}$ ; equalizing pulse =  $2.3\text{ }\mu\text{s} \pm 50\text{ ns}$

- a.** Connect the test equipment as shown in Figure 5–2.
- b.** Display CH A on the waveform monitor.
- c.** Select any signal from the signal generator in the NTSC/YC format.
- d.** Use the variable vertical gain to normalize the sync to 0 – 100 IRE.
- e.** CHECK that horizontal sync duration between 50% points is  $4.7\text{ }\mu\text{s} \pm 50\text{ ns}$ .
- f.** Set the waveform monitor to display the serrations and equalizing pulses in the vertical interval.

- g. CHECK that the half-amplitude duration of the vertical serrations is  $4.7 \mu\text{s} \pm 50 \text{ ns}$ .
  - h. CHECK that the half-amplitude duration of the equalizing pulses is  $2.3 \mu\text{s} \pm 50 \text{ ns}$ .
- 18.** Line blanking interval:  $10.9 \mu\text{s} \pm 200 \text{ ns}$
- a. Connect the test equipment as shown in Figure 5–2.
  - b. Display CH A on the waveform monitor in 2 line mode.
  - c. Select the 100% field signal in NTSC/YC format from the signal generator.
  - d. Set the waveform monitor to display horizontal blanking.
  - e. CHECK that the horizontal blanking interval is  $10.9 \mu\text{s} \pm 200 \text{ ns}$  between the 20 IRE points of the signal.
- 19.** Frequency response: flat to  $4.2 \text{ MHz} \pm 2\%$
- a. Connect the test equipment as shown in Figure 5–2.
  - b. Display CH A on the waveform monitor.
  - c. Select the Multiburst signal in NTSC/YC format from the signal generator.
  - d. CHECK that the packets are flat and equal amplitude within 2%.
- 20.** Differential phase and gain:  $0.3^\circ$  &  $0.3\%$  maximum
- a. Connect the test equipment as shown in Figure 5–2.
  - b. Display CH A on the waveform monitor using internal reference.
  - c. Select the mod ramp signal in NTSC/YC format from the signal generator.
  - d. Set the 1780R or separate vectorscope to measure differential phase. Use the double trace method, if possible.
  - e. CHECK for differential phase of  $\leq 0.3^\circ$ .
  - f. Set the test equipment to measure differential gain. Again, use a double trace, if possible.
  - g. CHECK that the differential gain of the modulated ramp is  $\leq 0.3\%$ .

**21. SC/H phase:  $0^\circ \pm 5^\circ$** 

**NOTE.** Accurate SC/H measurements may be difficult without test equipment having modes intended for that purpose. The SC/H phase error in signal generator test signals is typically less than  $1^\circ$ .

---

- a. Connect the test equipment as shown in Figure 5–2.
- b. Display CH A on the waveform monitor using internal reference. (Internal reference is necessary for this measurement to measure the absolute SC/H phase of the signal instead of relative to the external reference.)
- c. Select any test signal in NTSC/YC format from the signal generator.
- d. Confirm that the measurement set is internally referenced and set it to display the SC/H phase of the signal.
- e. CHECK that the SC/H phase error is  $< 5^\circ$ .
- f. Return the waveform monitor to external reference.

**Y Channel (Luminance)****22. Blanking level:  $0 \text{ mVDC} \pm 50 \text{ mVDC}$** 

- a. Connect the test equipment as shown in Figure 5–2.
- b. Display CH B1 on the waveform monitor.
- c. Select the Steps (5-Step) signal in NTSC/YC format from the signal generator.
- d. Confirm that any DC-restorer feature of the monitor is off.
- e. Switch the display from DC coupled to ground reference.
- f. Use the vertical position adjustment of the waveform monitor to set the ground line to a convenient reference graticule.
- g. Switch back to DC coupling.
- h. CHECK that the blanking level is on the reference graticule  $\pm 50 \text{ mV}$ .

**23. Sync amplitude:  $285.7 \text{ mV} \pm 2\%$ ;  $300.0 \text{ mV} \pm 2\%$  for MII 3-wire signals**

- a. Connect the test equipment as shown in Figure 5–2.
- b. Display CH B1 on the waveform monitor.
- c. Select any signal from the signal generator in the NTSC/YC format.

- d. Using the WFM + CAL, match the signal level of the lower waveform to the sync tip of the upper waveform.
  - e. CHECK that the sync amplitude is 285.7 mV  $\pm 2\%$ .
  - f. Select the 0% flat field from the signal generator in the Y/CTDM format.
  - g. Using the WFM + CAL, match the signal level of the lower waveform to the sync tip of the upper waveform.
  - h. CHECK that the sync amplitude is 285.7 mV  $\pm 2\%$ .
  - i. Select the 0% flat field from the signal generator in the Y, B-Y, R-Y format.
  - j. Using the WFM + CAL, match the signal level of the lower waveform to the sync tip of the upper waveform.
  - k. CHECK that the sync amplitude is 285.7 mV  $\pm 2\%$  (300.0 mV  $\pm 2\%$  if an MII option is installed).
- 24.** Line sync duration: 4.7  $\mu$ s  $\pm 50$  ns; 5.0  $\mu$ s  $\pm 50$  ns for 2-wire Betacam
- a. Connect the test equipment as shown in Figure 5–2.
  - b. Display CH B1 on the waveform monitor in the line display mode.
  - c. Set the waveform monitor to display the sync on any signal generator test signal in the NTSC/YC mode.
  - d. Use the variable gain control to normalize the sync to 100 IRE and set the top and bottom of the sync to 100 and 0 IRE respectively.
  - e. Using the timing cursor, measure the time from the 50 IRE points of the sync.
  - f. CHECK that the sync duration is 4.7  $\mu$ s  $\pm 50$  ns.

---

***NOTE.** Only do the rest of this procedure if you are testing a standard instrument or if one of the Betacam options is installed.*

---

- g. Set the waveform monitor to display the sync on any signal generator test signal in the Y/CTDM mode using internal reference.
- h. Use the variable gain control to normalize the sync to 100 IRE and set the top and bottom of the sync to 100 and 0 IRE respectively.
- i. Using the timing cursor, measure the time from the 50 IRE points of the sync.
- j. CHECK that the sync duration is 5.0  $\mu$ s  $\pm 50$  ns.

**25.** Steps (5-step) staircase linearity: <1%

- a.** Connect the test equipment as shown in Figure 5–2.
- b.** Display CH B1 on the waveform monitor.
- c.** Select the Steps (5-Step) signal in NTSC/YC format. Set the test equipment to view the Y output through the Differentiated Step filter.
- d.** CHECK using the voltage cursors, that the difference between the highest and lowest spikes (differentiated steps) is no greater than 1%.

**26.** Line time distortion (line tilt): <0.5%

- a.** Connect the test equipment as shown in Figure 5–2.
- b.** Display CH B1 on the waveform monitor.
- c.** Select the 100% Field signal from the signal generator in NTSC/YC format.
- d.** Normalize the signal gain so that the blanking level of the waveform is on the baseline and the top of the signal passes through 100 IRE at the midpoint of the line tilt.
- e.** Center the bar horizontally over a graticule.
- f.** CHECK that the signal tilts no more than 0.5% (0.5 IRE) over its length. Ignore the first and last microsecond of the signal.

**27.** Field time distortion (field tilt): <0.5%

- a.** Connect the test equipment as shown in Figure 5–2.
- b.** Display CH B1 on the waveform monitor.
- c.** Select the 100% field signal in NTSC/YC format from the signal generator.
- d.** Normalize the signal gain so that the blanking level of the waveform is on the baseline and the top of the signal passes through 100 IRE at the midpoint of the line tilt.
- e.** Set the test equipment to view one field of the signal.
- f.** CHECK that the signal tilts no more than 0.5% over its length. Ignore the first and last 0.2 milliseconds (about 3 lines) of the bar.

**28.** Ringing:  $K_{2T}$  factor  $<0.6\% \leq 1\%$  of peak

- a.** Connect the test equipment as shown in Figure 5–2.
- b.** Display CH B1 on the waveform monitor.

- c. Select the pulse & bar signal in NTSC/YC format from the signal generator.
  - d. Use the K factor measurement mode of the 1780R to measure the K factor of the 2T pulse.
  - e. CHECK that the  $K_{2T}$  factor is  $<0.6\%$ .
  - f. Normalize the signal gain so that the blanking level of the waveform is on the baseline and the top of the 2T pulse is at 100 IRE.
  - g. Set the equipment to display the bottom of the 2T pulse at line rate.
  - h. CHECK with voltage cursors or graticule that ringing is  $<1\%$  (1 IRE peak).
- 29. Pulse-to-bar ratio:  $1:1 \pm 1\%$**
- a. Connect the test equipment as shown in Figure 5–2.
  - b. Display CH B1 on the waveform monitor.
  - c. Set the waveform monitor to display the tip of the inverted pulse of the pulse & bar with signal in NTSC/YC format.
  - d. CHECK that the inverted pulse tip is within 1% of blanking level, using the WFM + CAL signal.
- 30. Sine squared pulse accuracy: HADs accurate within 25 ns**
- a. Connect the test equipment as shown in Figure 5–2.
  - b. Display CH B1 on the waveform monitor in the line display mode using internal reference.
  - c. Set the waveform monitor to display the 2T pulse on the T Pulses signal in Y, B-Y, R-Y format.
  - d. Use the variable gain control to normalize the pulse to 100 IRE and use the horizontal magnification to make the pulse fill the waveform monitor display.
  - e. Using the timing cursors, measure the time between the 50 IRE points.
  - f. CHECK that the HAD of the 2T pulse is  $250 \text{ ns} \pm 25 \text{ ns}$ .
  - g. Set the waveform monitor to display the 3T pulse on the T pulses signal in Y, B-Y, R-Y format.
  - h. Use the variable gain control to normalize the pulse to 100 IRE and use the horizontal magnification to make the pulse fill the waveform monitor display.

- i. Using the timing cursors, measure the time between the 50 IRE points.
  - j. CHECK that the HAD of the 3T pulse is 375 ns  $\pm 25$  ns.
  - k. Set the waveform monitor to display the 5T pulse on the T pulses signal in Y, B-Y, R-Y format.
  - l. Use the variable gain control to normalize the pulse to 100 IRE and use the horizontal magnification to make the pulse fill the waveform monitor display.
  - m. Using the timing cursors, measure the time between the 50 IRE points.
  - n. CHECK that the HAD of the 5T pulse is 625 ns  $\pm 25$  ns.
31. Horizontal sync duration, vertical serration duration, equalizing pulse duration: sync = 4.7  $\mu$ s  $\pm 50$  ns; vertical serration = 4.7  $\mu$ s  $\pm 50$  ns; equalizing pulse = 2.3  $\mu$ s  $\pm 50$  ns
  - a. Connect the test equipment as shown in Figure 5–2.
  - b. Select any signal in the NTSC/YC format.
  - c. Display CH B1 on the waveform monitor.
  - d. CHECK that horizontal sync duration between 50% points is 4.7  $\mu$ s  $\pm 50$  ns.
  - e. Set the waveform monitor to display the serrations and equalizing pulses in the vertical interval.
  - f. CHECK that the half-amplitude duration of the vertical serrations is 4.7  $\mu$ s  $\pm 50$  ns.
  - g. CHECK that the half-amplitude duration of the equalizing pulses is 2.3  $\mu$ s  $\pm 50$  ns.

#### C Channel (Chrominance)

32. Chrominance response:  $\pm 1\%$ 
  - a. Connect the test equipment as shown in Figure 5–2.
  - b. Display CH B2 on the waveform monitor using external reference.
  - c. Select the chroma response signal from the signal generator in NTSC/YC format.
  - d. CHECK that the amplitude of the chrominance is flat, within 1%, using the voltage cursors.
33. Chrominance amplitude:  $\pm 1\%$ 
  - a. Connect the test equipment as shown in Figure 5–2.

- b. Display CH B2 on the waveform monitor using external reference.
- c. Select the chroma noise signal in NTSC/YC format from the signal generator.
- d. Using the WFM + CAL, adjust the waveform to match the top of the lower waveform with the bottom of the upper.
- e. CHECK that the chrominance amplitude is  $100 \text{ IRE}_{\text{p-p}} \pm 1 \text{ IRE}$  (1%)

**34. Burst amplitude:  $285.7 \text{ mV}_{\text{p-p}}$  (40 IRE)  $\pm 2\%$**

- a. Connect the test equipment as shown in Figure 5–2.
- b. Display CH B2 on the waveform monitor using external reference.
- c. Select any test signal in the NTSC/YC format.
- d. Use the WFM + CAL feature to match the top of the lower burst with the bottom of the upper.
- e. CHECK that burst amplitude is  $285.7 \text{ mV}_{\text{p-p}} \pm 2\%$  (40 IRE  $\pm 0.8 \text{ IRE}$ ).

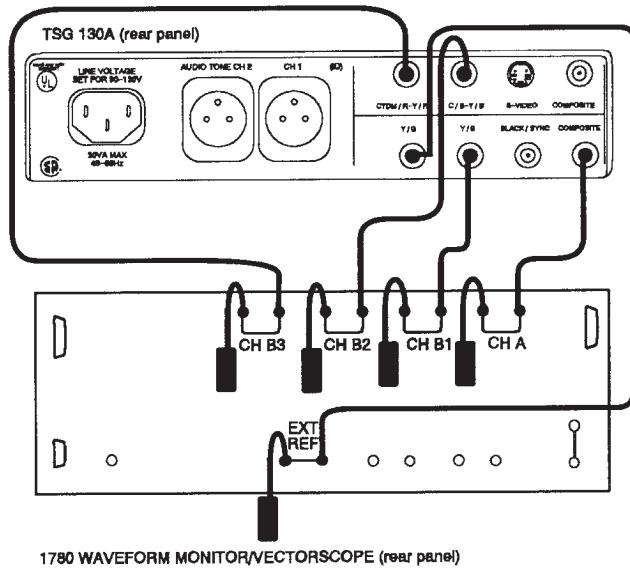

**35. Burst rise times:  $400 \text{ ns} \pm 40 \text{ ns}$**

- a. Connect the test equipment as shown in Figure 5–2.
- b. Set the signal generator to output the chroma response signal in the NTSC/YC format.
- c. Display CH B2 on the waveform monitor using external reference.
- d. Set the waveform monitor to display the burst on the B2 channel.
- e. Use the variable vertical gain to normalize half the burst to 100 IRE and use the horizontal magnification to display the rise on the waveform monitor.
- f. Use the timing cursors to measure the rise time of the burst envelope from the 10 IRE graticule to the 90 IRE graticule.
- g. CHECK that rise time is  $400 \text{ ns} \pm 40 \text{ ns}$ .

**36. Chrominance rise times:  $400 \text{ ns} \pm 40 \text{ ns}$**

- a. Connect the test equipment as shown in Figure 5–2.
- b. Set the signal generator to output the chroma response signal in the NTSC/YC format.
- c. Display CH B2 on the waveform monitor using external reference.
- d. Set the waveform monitor to display the rise on the B2 channel.

- e. Use the variable vertical gain to normalize the rise to 100 IRE and use the horizontal magnification to display the rise on the waveform monitor.
- f. Use the timing cursors to measure the rise time of the chrominance envelope from the 10 IRE graticule to the 90 IRE graticule.
- g. CHECK that rise time is 400 ns  $\pm$ 40 ns.

**Figure 5–3: Setup for remaining standard performance checks (EXT REF cable moved to Y/G output)**

**NOTE.** If the signal generator under check has an optional black burst signal installed, use that signal as the waveform monitor EXT REF input.

#### B-Y Signals

#### 37. B-Y blanking level: 0 mVDC $\pm$ 50 mVDC

- a. Connect the equipment as shown in Figure 5–3.
- b. Display CH B2 on the waveform monitor using external reference.
- c. Select any signal from the signal generator in Y, B-Y, R-Y format.
- d. Switch the display from DC coupled to ground reference.
- e. Use the vertical position adjustment of the waveform monitor to set the ground line to a convenient reference graticule.

f. Return to DC coupling.

g. CHECK that the blanking level is on the reference graticule  $\pm 50$  mV.

**38.** B-Y rise times: color bars 400 ns  $\pm 40$  ns; other signal transitions 250 ns  $\pm 25$  ns

a. Connect the equipment as shown in Figure 5–3.

b. Set the signal generator to output 100% Color Bars in the Y, B-Y, R-Y format.

c. Display CH B2 on the waveform monitor using external reference.

d. Turn on Time Cursors and set for ‘Separate’ on the touch screen. Dial in 400 ns and touch ‘Track.’

e. Use the Waveform Variable Gain and Vert.Pos. controls to normalize the first falling edge to 50 IRE amplitude with the baseline at 50 IRE.

f. Move the time cursors to 90% (45 IRE) and 10% (5 IRE).

g. CHECK that the fall time is 400 ns  $\pm 40$  ns. Touch ‘Separate’ and dial timing cursor if necessary.

h. With the timing cursors set to track 400 ns, move the cursors to other rising and falling edges and observe 10% and 90% points.

i. Set the signal generator to output 5 Step and set the timing cursor to track 250 ns.

j. Normalize the first falling edge to 50 IRE as before.

k. CHECK that tracking cursors fall at 45 IRE and 5 IRE and at 10% and 90% points when moved to other edges.

**39.** B-Y sine squared pulse accuracy: HADs accurate within 25 ns

a. Connect the equipment as shown in Figure 5–3.

b. Display CH B2 on the waveform monitor in the line display mode using external reference.

c. Set the waveform monitor to display the 4T pulse on the T pulses signal in Y, B-Y, R-Y format.

d. Use the variable gain control to normalize the pulse to 100 IRE and use the horizontal magnification to make the pulse fill the waveform monitor display.

e. Using the timing cursors, measure the time between the 50 IRE points.

f. CHECK that the HAD of the 4T pulse is 500 ns  $\pm 25$  ns.

- g. Set the waveform monitor to display the 7T pulse on the T pulses signal in Y, B-Y, R-Y format.
- h. Use the variable gain control to normalize the pulse to 100 IRE and use the horizontal magnification to make the pulse fill the waveform monitor display.
  - i. Using the timing cursors, measure the time between the 50 IRE points.
  - j. CHECK that the HAD of the 7T pulse is 875 ns  $\pm 25$  ns.

**R-Y Signals**

**40. Blanking level: 0 mVDC  $\pm 50$  mVDC**

- a. Connect the equipment as shown in Figure 5–3.
- b. Display CH B3 on the waveform monitor using external reference.
- c. Select any signal from the signal generator in the Y, B-Y, R-Y format.
- d. Switch the display from DC coupled to ground reference.
- e. Use the vertical position adjustment of the waveform monitor to set the ground line to a convenient reference graticule.
- f. Return to DC coupling.
- g. CHECK that the blanking level is on the reference graticule  $\pm 50$  mV.

**41. R-Y rise times: color bars 400 ns  $\pm 40$  ns; other signal transitions 250 ns  $\pm 25$  ns**

- a. Connect the equipment as shown in Figure 5–3.
- b. Set the signal generator to output 100% Color Bars in the Y, B-Y, R-Y format.
- c. Display CH B3 on the waveform monitor using external reference.
- d. Turn on Time Cursors and set for ‘Separate’ on the touch screen. Dial in 400 ns and touch Track.
- e. Use the Waveform Variable Gain and Vert.Pos. controls to normalize the first falling edge to 50 IRE amplitude with the baseline at 50 IRE.
- f. Move the time cursors to 90% (45 IRE) and 10% (5 IRE).
- g. CHECK that the fall time is 400 ns  $\pm 40$  ns. Touch ‘Separate’ and dial timing cursor if necessary to determine the fall time of the edge. Reset the time cursors to 400 ns.
- h. With the timing cursors set to track 400 ns, move the cursors to other rising and falling edges and observe 10% and 90% points.

- i. Set the signal generator to output 5 Step and set the timing cursor to track 250 ns.

- j. Normalize the first falling edge to 50 IRE as before.

- k. CHECK that tracking cursors fall at 45 IRE and 5 IRE and at 10% and 90% points when moved to other edges.

**42. R-Y sine squared pulse accuracy: HADs accurate within 25 ns**

- a. Connect the equipment as shown in Figure 5–3.

- b. Display CH B3 on the waveform monitor in the line display mode using external reference.

- c. Set the waveform monitor to display the 4T pulse on the T pulses signal in Y, B-Y, R-Y format.

- d. Use the variable gain control to normalize the pulse to 100 IRE and use the horizontal magnification to make the pulse fill the waveform monitor display.

- e. Using the timing cursors, measure the time between the 50 IRE points.

- f. CHECK that the HAD of the 4T pulse is 500 ns  $\pm 25$  ns.

- g. Set the waveform monitor to display the 7T pulse on the T pulses signal in Y, B-Y, R-Y format.

- h. Use the variable gain control to normalize the pulse to 100 IRE and use the horizontal magnification to make the pulse fill the waveform monitor display.

- i. Using the timing cursors, measure the time between the 50 IRE points.

- j. CHECK that the HAD of the 7T pulse is 875 ns  $\pm 25$  ns.

---

## Green Channel

*NOTE. Before using the GBR signal format, check that the green channel has sync enabled. If there is no sync on the green signal, move jumper J123 to the 2-3 position.*

---

**43. Amplitude accuracy:  $\pm 1\%$**

- a. Connect the equipment as shown in Figure 5–3.

- b. Display CH B1 on the waveform monitor.

- c. Select the 100% bars signal in GBR format from the signal generator.

- d. With the WFM + CAL function of the measurement set match the top of the lower waveform with the blanking level of the upper waveform.

- e. CHECK that the amplitude is  $700 \text{ mV} \pm 7 \text{ mV}$  (1%).

**44.** Green frequency response: flat to  $5.0 \text{ MHz} \pm 1\%$ ; flat to  $5.5 \text{ MHz} \pm 2\%$

- a. Connect the equipment as shown in Figure 5–3.

- b. Display CH B1 on the waveform monitor.

- c. Select the Sweep signal from the signal generator in GBR format.

- d. CHECK using the WFM + CAL function, that the signal amplitude is flat within 1% to  $5.0 \text{ MHz}$  and flat within 2% to  $5.5 \text{ MHz}$ .

**45.** Sync amplitude:  $300.0 \text{ mV} \pm 2\%$

- a. Connect the equipment as shown in Figure 5–3.

- b. Display CH B1 on the waveform monitor.

- c. Select any signal from the signal generator in the GBR format.

- d. Using the WFM + CAL, match the signal level of the lower waveform to the sync tip of the upper waveform.

- e. CHECK that the sync amplitude is  $300.0 \text{ mV} \pm 2\%$ .

**Blue Channel**

**46.** Blue gain:  $\pm 1\%$

- a. Connect the equipment as shown in Figure 5–3.

- b. Display CH B2 on the waveform monitor using external reference.

- c. Select GBR format and the blue field test signal from the signal generator.

- d. Use the WFM + CAL feature to match the top of the lower waveform with the bottom of the upper.

- e. CHECK that signal amplitude is  $700 \text{ mV}_{\text{p-p}} \pm 7 \text{ mV}$  (1%).

**47.** Blue frequency response: flat to  $5.0 \text{ MHz} \pm 1\%$ ; flat to  $5.5 \text{ MHz} \pm 2\%$

- a. Connect the equipment as shown in Figure 5–3.

- b. Display CH B2 on the waveform monitor using external reference.

- c. Select GBR format and the sweep test signal from the signal generator.

- d. Use the WFM + CAL feature to match the top of the lower waveform with the bottom of the upper.

- e. CHECK that the sweep portion of the signal is flat within 1% out to 5.0 MHz and flat to within 2% out to 5.5 MHz.

**48. Blue staircase linearity: <1%**

- a. Connect the equipment as shown in Figure 5–3.
- b. Display CH B2 on the waveform monitor using external reference.
- c. Select GBR format and the 10-step test signal from the signal generator.
- d. Set the test equipment to view the signal through a differentiated step filter.
- e. CHECK using the voltage cursors, that the upward spikes (differentiated steps) are equal within 1%.

**49. Line tilt:  $\pm 0.5\%$**

- a. Connect the equipment as shown in Figure 5–3.
- b. Display channel B2 on the waveform monitor using external reference.
- c. Select the blue field signal from the signal generator in the GBR format.
- d. Normalize the signal gain so that blanking level of the waveform is on the baseline and the top of the signal passes through 100 IRE at its midpoint.
- e. Center the signal over a horizontal graticule.
- f. CHECK that the line tilts no more than 0.5% (0.5 IRE) over its length. Ignore the first and last microsecond of the bar.

**50. Field tilt:  $\pm 0.5\%$**

- a. Connect the equipment as shown in Figure 5–3.
- b. Display channel B2 on the waveform monitor using external reference.
- c. Select the Blue Field signal from the signal generator in GBR format.
- d. Normalize the signal gain so that blanking level of the waveform is on the baseline and the top of the signal passes through 100 IRE at its midpoint.
- e. Set the test equipment to view one field of the signal.
- f. CHECK that the field bar tilts no more than 0.5% over its length. Ignore the first and last 3 lines of the signal.

**51. Pulse-to-bar ratio:  $1:1 \pm 1\%$**

- a. Connect the equipment as shown in Figure 5–3.

- b.** Display CH B2 on the waveform monitor using external reference.
- c.** Set the signal generator to output the pulse & bar signal in the GBR format.
- d.** Set the waveform monitor to display the tip of the inverted pulse of the pulse & bar signal.
- e.** CHECK that the inverted pulse tip is within 1% of the 0 IRE reference graticule, using the WFM + CAL signal.

**Red Channel**

- 52.** Red frequency response: flat to 5.0 MHz  $\pm 1\%$   
Flat to 5.5 MHz  $\pm 2\%$

- a.** Connect the equipment as shown in Figure 5–3.
- b.** Display CH B3 on the waveform monitor using external reference.
- c.** Select GBR format and the Sweep test signal from the signal generator.
- d.** Use the WFM + CAL feature to match the top of the lower waveform with the bottom of the upper.
- e.** CHECK that the sweep portion of the signal is flat within 1% out to 5.0 MHz and flat within 2% out to 5.5 MHz.

- 53.** Staircase linearity:  $<1\%$

- a.** Connect the equipment as shown in Figure 5–3.
- b.** Display CH B3 on the waveform monitor using external reference.
- c.** Select GBR format and the 10-Step test signal from the signal generator.
- d.** Set the test equipment to view the signal through a differentiated step filter.
- e.** CHECK that the upward spikes (differentiated steps) are equal within 1%.

- 54.** Red gain:  $\pm 1\%$

- a.** Connect the equipment as shown in Figure 5–3.
- b.** Display CH B3 on the waveform monitor using external reference.
- c.** Select GBR format and red field test signal from the signal generator.
- d.** Use the WFM + CAL to align to top of the lower waveform with the blanking level of the upper.
- e.** CHECK that signal amplitude is 700 mV  $\pm 7$  mV (1%).

**55.** Line tilt:  $\pm 0.5\%$ 

- a. Connect the equipment as shown in Figure 5–3.
- b. Display channel B3 on the waveform monitor using external reference.
- c. Select the red field signal from the signal generator in GBR format.
- d. Normalize the signal gain so that blanking level of the waveform is on the baseline and the top of the signal passes through 100 IRE at its midpoint.
- e. Center the signal over a horizontal graticule.
- f. CHECK that the line tilts no more than 0.5% over its length. Ignore the first and last microsecond of the bar.

**56.** Field tilt:  $\pm 0.5\%$ 

- a. Connect the equipment as shown in Figure 5–3.
- b. Display channel B3 on the waveform monitor using external reference.
- c. Select the red field signal from the signal generator in GBR format.
- d. Normalize the signal gain so that blanking level of the waveform is on the baseline and the top of the signal passes through 100 IRE at its midpoint.
- e. Set the test equipment to view one field of the signal.
- f. CHECK that the field bar tilts no more than 0.5% over its length. Ignore the first and last 3 lines of the signal.

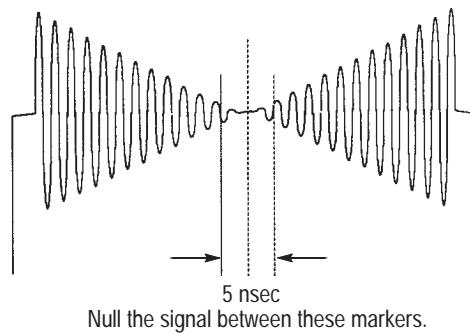

**57.** Pulse-to-bar ratio:  $1:1 \pm 1\%$ 

- a. Connect the equipment as shown in Figure 5–3.
- b. Display CH B3 on the waveform monitor in external reference.
- c. Set the signal generator to output the pulse & bar signal in the GBR format.
- d. Set the waveform monitor to display the tip of the inverted pulse of the pulse & bar signal.
- e. CHECK that the inverted pulse tip is within 1% of blanking level, using the WFM + CAL signal.

**Inter-Channel Timing and Amplitude****58.** B-Y to Y Timing: within 5 ns

- a. Connect the equipment as shown in Figure 5–3.

- b. Display CH B1-B2 on the waveform monitor using external reference.
- c. Select Y, B-Y, R-Y format and the Bowtie test signal from the signal generator.
- d. Use 5X waveform gain to accentuate the bowtie.
- e. CHECK that the crossover point of the bowtie falls within the 5 ns markers (see Figure 5-4).

**Figure 5-4: Bowtie crossover**

**59. R-Y to Y timing: within 5 ns**

- a. Connect the equipment as shown in Figure 5-3.
- b. Display CH B1-B3 on the waveform monitor using external reference.
- c. Select Y, B-Y, R-Y format and the bowtie test signal from the signal generator.
- d. Use 5X waveform gain to accentuate the bowtie.
- e. CHECK that the crossover point of the bowtie falls between the 5 ns markers (see Figure 5-4).

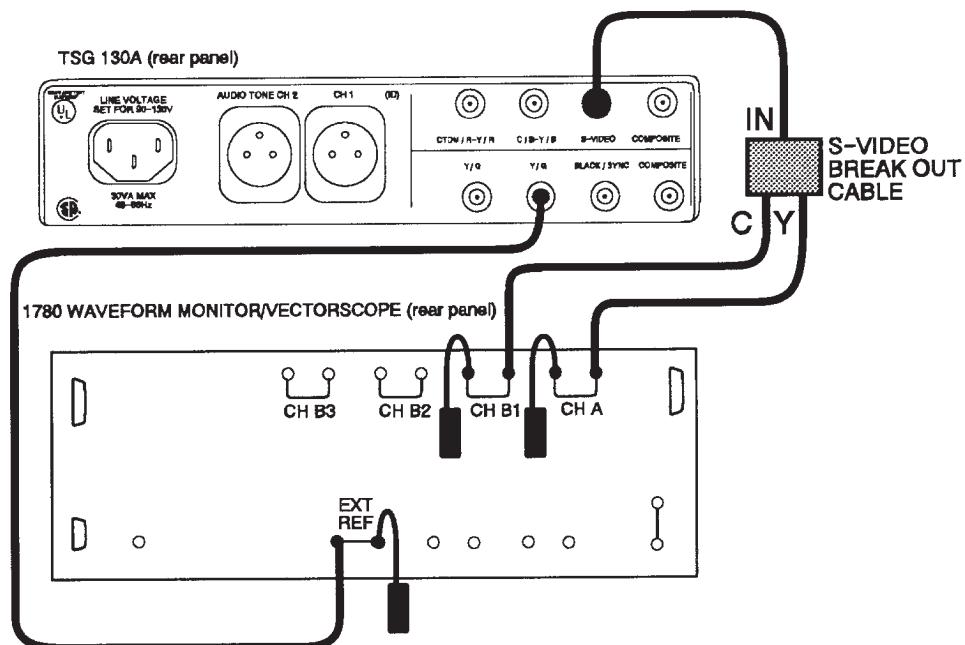

**60. GBR amplitude matching:  $\pm 0.5\%$**

- a. Connect the equipment as shown in Figure 5-3.
- b. Display CH B1, B2, and B3 on the waveform monitor using external reference in overlay mode.
- c. Select GBR format and the 100% bars test signal from the signal generator.
- d. Use the channel offset to set the bottom of the waveforms to the 0 IRE graticule.

- e. Use the X5 gain to display any differences in the amplitude at the top of the signals.
- f. CHECK that the amplitude of the signals are equal within 0.5%.

**S-video Output****61. S-video frequency response: 4.2 MHz  $\pm 2\%$** 

- a. Connect the test equipment as shown in Figure 5–5.
- b. Display CH A on the waveform monitor using EXT REF.
- c. Select line sweep from the signal generator in the NTSC/Y-C mode.
- d. CHECK that the signal is flat within 2% to 4.2 MHz.
- e. Display CH B1 on the waveform monitor using EXT REF.
- f. Select the chroma response signal from the signal generator in the NTSC/Y-C format.
- g. CHECK that the signal is flat within 2% to 4.2 MHz.

**Figure 5–5: Setup to check S-video output****Audio Output****62. Total harmonic distortion: TDH  $\leq 0.5\%$** 

- a. Disable the CH 1 ID click by moving jumper J12 to pins 2 and 3.

- b. Connect the equipment as shown in Figure 5–6, placing a  $600\ \Omega$  resistor across the analyzer's + and – terminals (to represent the system load).
- c. Set the distortion analyzer to measure THD.
- d. CHECK that the THD on CH 1 is  $\leq 0.5\%$ .
- e. Return jumper J12 to pins 1 and 2.
- f. Move the cable at the signal generator from audio channel 1 to audio channel 2.
- g. CHECK that the THD on channel 2 is  $\leq 0.5\%$ .

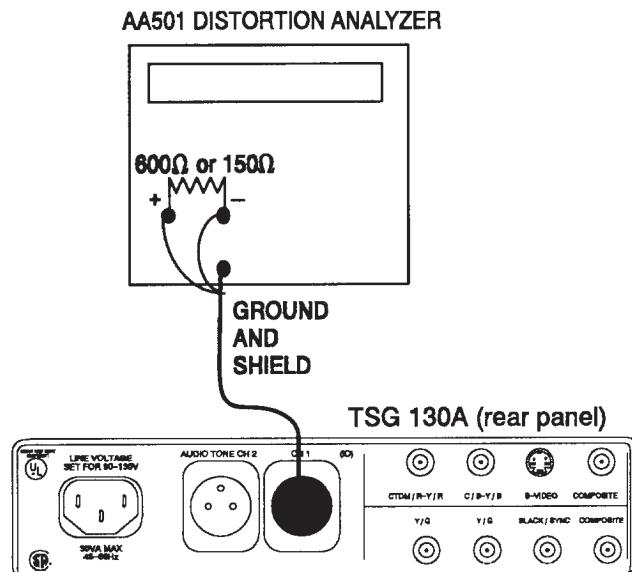

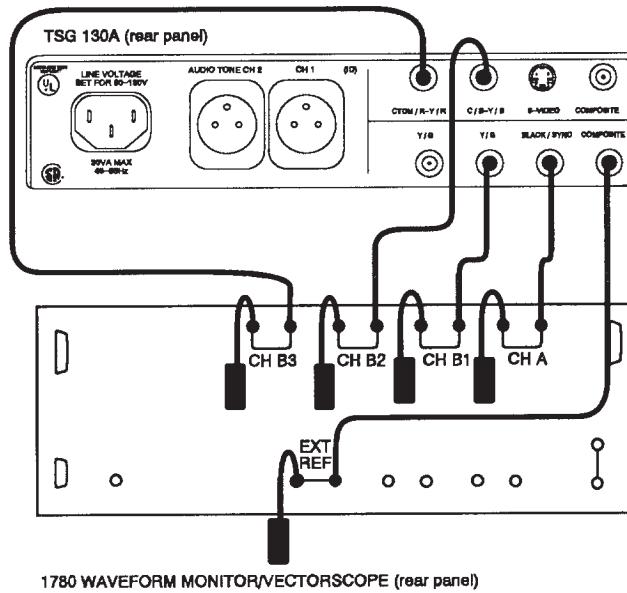

Figure 5–6: Setup to measure total harmonic distortion

**Figure 5-7: Setup to check black burst output**

**Black Burst Output  
(Option 01/02, 02, 03, 2J)**

63. Black burst amplitude:  $7.5 \text{ IRE} \pm \text{IRE}$ ;  $0 \text{ IRE} \pm 1 \text{ IRE}$  (Option 2J)
  - a. Connect the equipment as shown in Figure 5-7.
  - b. Display CH A in the WFM + CAL mode.
  - c. CHECK that the amplitude of the signal is  $7.5 \text{ IRE} \pm 1 \text{ IRE}$  ( $0 \text{ IRE} \pm 1 \text{ IRE}$  Option 2J).
64. Black burst blanking width:  $10.9 \pm 0.2 \mu\text{s}$ 
  - a. Connect the equipment as shown in Figure 5-7.
  - b. Display CH A on the waveform monitor.
  - c. Use the voltage cursor to measure the time between the 4 IRE point on the front porch and the 4 IRE point on the back porch.
  - d. CHECK that the blanking width is  $10.9 \pm 0.2 \mu\text{s}$ .

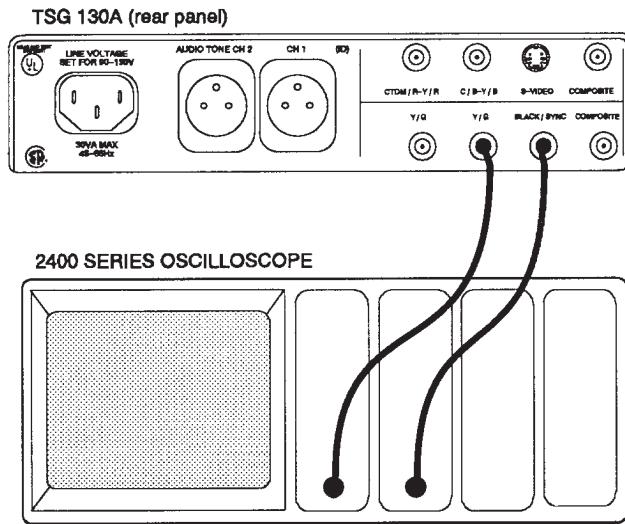

Figure 5–8: Setup to check Option pulse outputs

**Composite Sync (Options 01/02, 02, 03)**

65. Duration: horizontal sync =  $4.7 \mu\text{s} \pm 50 \text{ ns}$ ; vertical serration =  $4.7 \mu\text{s} \pm 50 \text{ ns}$ ; equalizing pulse =  $2.3 \mu\text{s} \pm 50 \text{ ns}$
- Connect the equipment as shown in Figure 5–8.
  - Select the 0% flat field from the signal generator in NTSC/YC mode.
  - Display the comp sync signal on the scope.
  - Display one of the sync pulses so that its width covers the entire horizontal display.
  - Use the variable vertical gain to normalize the pulse to 6 or 8 divisions.
  - Use the horizontal position control to place the midpoint of the sync on the 0 graticule.
  - CHECK that the time between the 50% points of the horizontal sync is  $4.7 \mu\text{s} \pm 50 \text{ ns}$ .
  - CHECK that the time between the 50% points of the vertical serration is  $4.7 \mu\text{s} \pm 50 \text{ ns}$ .
  - CHECK that the time between the 50% points of the equalizing pulse is  $2.3 \mu\text{s} \pm 50 \text{ ns}$ .
66. Amplitude:  $-4.0 \text{ V} \pm 0.5 \text{ V}$
- Connect the equipment as shown in Figure 5–8.

- b. Connect the BLACK/SYNC output to one input of the oscilloscope and Y to the other.

- c. Select the 0% flat field from the signal generator in NTSC/YC mode.

- d. CHECK that the amplitude of the comp sync is -4 V within 500 mV.

**67.** Rise and fall times: 140 ns  $\pm$ 20 ns

- a. Connect the equipment as shown in Figure 5–8.

- b. Display the comp sync on the oscilloscope.

- c. Use the variable vertical gain to normalize the sync to 10 divisions high.

- d. Expand the horizontal display as much as possible, still having the entire falling edge of the sync displayed.

- e. Measure the time between the middle 8 divisions.

- f. CHECK that the fall time is 140 ns  $\pm$ 20 ns.

- g. Repeat for the rising edge.

**Color Flag Reference Pulse (Option 03)**

**68.** Amplitude & position

- a. Connect the signal generator black/sync output to one of the oscilloscope inputs, using a  $75 \Omega$  coax and a  $75 \Omega$  feed-through terminator. Set this input to 200 mV/div.

- b. Connect the left Y/G output to a second oscilloscope input. Set this input to 2 V/div.

- c. Set the oscilloscope to trigger from the black/sync input, at a 10 ms sweep rate, displaying both inputs.

- d. CHECK that there is a negative-going pulse of approximately 5 V occurring on the Y/G output once every four fields, just before the F1L10 pulse on the black burst signal from the black/sync output.

- e. Expand the oscilloscope horizontal to display this pulse at 100  $\mu$ s/div.

- f. CHECK that the color frame reference pulse is approximately 200  $\mu$ s in duration, and aligns with the vertical sync pulse interval of the black burst signal.

**Color Frame Square Wave  
(Option 04)**

**69. Amplitude & position**

- a.** Connect the black/sync output to one input of the oscilloscope and composite to the other.
- b.** Select the 0% flat field from the signal generator in NTSC/YC mode.
- c.** CHECK that the amplitude of the color frame square wave is -5 V within 200 mV.
- d.** CHECK that the timing of the color frame square wave is low for fields 1 and 2 and high for fields 3 and 4. The transition should occur on line 11.

# **Adjustment Procedure**

# Adjustment Procedures

Table 6–1 is a checklist for the following adjustment procedures.

**Table 6–1: Adjustment procedures list**

| No. | Description  | Notes   |
|-----|--|---|
| 1   | Oscillator frequency – Y1  |   |
| 2   | Audio output amplitude – R123, R122  |   |
| 3   | Audio ID click frequency – R126  |   |
| 4   | Y/G channel DC level and gain – R82, R79                                       |   |
| 5   | Y/G channel sin(x)/x compensation – C69  |   |
| 6   | Y/G channel frequency response and 2T ringing – L14, L15, L16, L17, L18        | These parts are factory set. Do not adjust unless these parts are out of spec.  |
| 7   | C/B-Y/B channel DC level and gain – R63, R60                                   |   |
| 8   | C/B-Y/B channel sin(x)/x compensation – C47                                    |   |
| 9   | C/B-Y/B channel frequency response and ringing – L8, L9, L10, L11, L12         | These parts are factory set. Do not adjust unless these parts are out of spec.  |
| 10  | CTDM/R-Y/R channel DC level and gain – R101, R98                               |   |
| 11  | CTDM/R-Y/R channel sin(x)/x compensation – C99                                 |   |
| 12  | CTDM/R-Y/R channel frequency response and 2T ringing – L20, L21, L22, L23, L24 | These parts are factory set. Do not adjust unless these parts are out of spec.  |
| 13  | Interchannel gain matching – R79, R60, R98                                     |   |
| 14  | Composite blanking level and gain – R20, R18                                   |   |
| 15  | Composite chrominance gain – R23   |   |
| 16  | Composite sin(x)/x compensation and chroma response – C19, C21                 |   |
| 17  | Inter-channel timing – C30, C32  | These steps are interactive. Repeat them in sequence until the best possible results are obtained. If satisfactory results cannot be achieved, repeat steps 4 – 16 before returning to this sequence. |
| 18  | Chrominance-to-luminance delay – C30   |   |
| 19  | SC/H phase – C30   |   |
| 20  | Channel 1 to channel 2 timing (re-check)                                       |   |
| 21  | Black burst DC level and gain – R231, R226                                     | The parts in these steps are loaded only in Options 01/02, 02, 03, and 2J.  |
| 22  | Black burst channel sin(x)/x compensation – C278                               |   |
| 23  | Black burst channel interchannel timing – L31, L32, L34, L35, L36              | The parts in step 23 are factory set. Do not adjust unless these parts are out of spec.   |
| 24  | Comp sync DC level and gain – R231, R226                                       | The parts in these steps are loaded only in Option 04.  |
| 25  | Comp sync channel sin(x)/x compensation – C278                                 |   |
| 26  | Comp sync interchannel timing – L31, L32, L34, L35, L36                        | The parts in step 26 are factory set. Do not adjust unless these parts are out of spec.   |

## Adjustment Procedures

1. Oscillator frequency – Y1
  - a. Connect the equipment as shown in Figure 6–1, connecting the probe to W151.
  - b. Set the DC503A to count a frequency referenced to channel B (ratio A/B).
  - c. Remove the round plastic cap from the top of the oscillator (Y1).
  - d. Fine-adjust the oscillator frequency to bring  $4F_{sc}$  to 14.31818 MHz  $\pm 28$  Hz.
  - e. Reinstall the plastic cap.

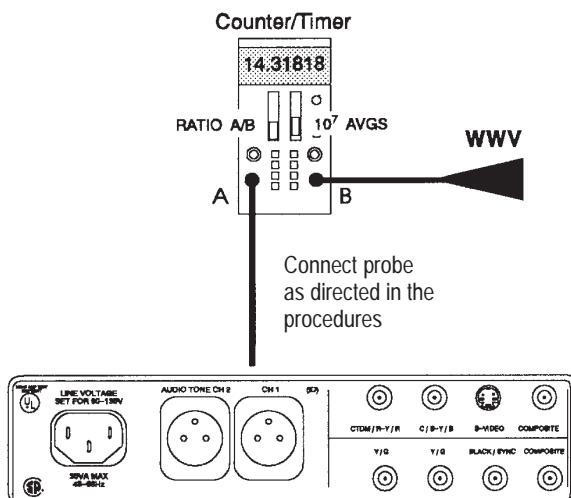

Figure 6–1: Setup to adjust oscillator frequency

2. Audio output amplitude – R123, R122
  - a. Connect the equipment as shown in Figure 6–2 with the following distortion analyzer settings:

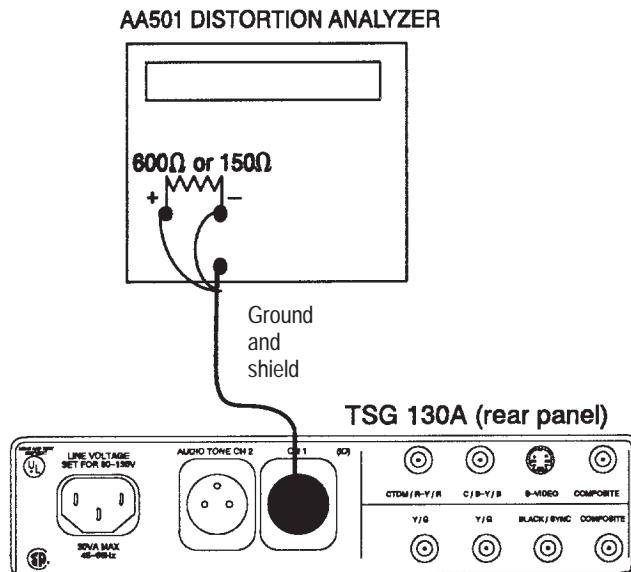

Table 6–2: Distortion analyzer settings

| Function          | Setting    |
|-------------------|------------|
| Input level range | Auto range |
| dBm switch        | In         |

**Table 6–2: Distortion analyzer settings (Cont.)**

| Function            | Setting |
|---------------------|---------|
| Level switch        | In      |
| All filter switches | Out     |

- b.** Disable the channel 1 ID click by moving jumper J12 to pins 2 and 3.
- c.** Adjust R123 to obtain the desired output level for audio 1 (factory setting is +8 dBm).
- d.** Return jumper J12 to the 1–2 position.
- e.** Move the TSG130A cable from audio channel 1 to audio channel 2.
- f.** Adjust R122 to obtain the desired output level for audio 2 (factory setting is +8 dBm).

**Figure 6–2: Audio amplitude calibration setup**

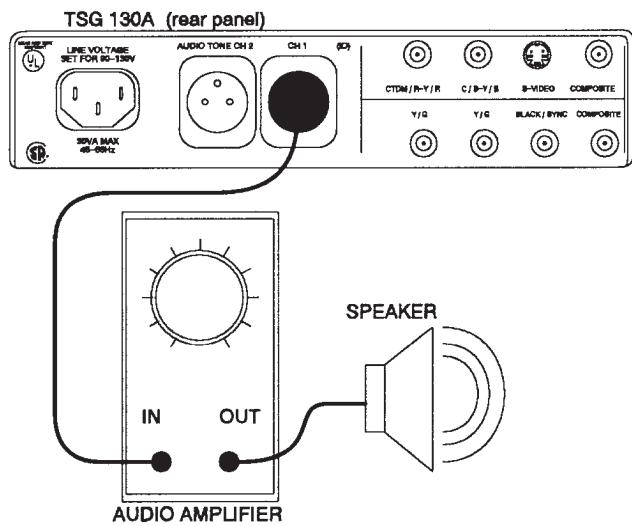

Figure 6-3: Audio ID click frequency adjustment setup

### 3. Audio ID click frequency – R126

- Connect the equipment as shown in Figure 6-3.
- Adjust R126 for the desired interval between ID clicks. The range of adjustment is about 0.2 – 4 seconds.

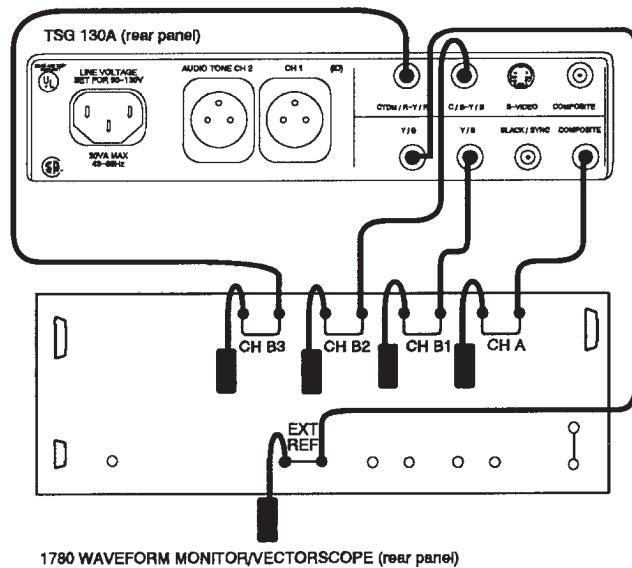

Figure 6-4: Basic setup for calibration procedures

**Table 6–3: Initial 1780 setup**

| Configure      | Front panel |
|----------------|-------------|
| Coupling       | DC          |
| Left display   | Vect        |
| Vector grat    | Int         |
| Right display  | WFM         |
| WFM grat       | Int         |
| Ref            | Ext         |
| Abs units      | IRE         |
| Filter         | Flat        |
| Vector readout | On          |
| WFM horizontal | One/line    |
| WFM readout    | On          |
| Waveform gain  | X5          |

---

***NOTE.** If the TSG130A under check has the optional black burst signal installed, use that signal as the waveform monitor Ext Ref input.*

---

4. Y/G channel DC level and gain – R82, R79
  - a. Begin with the 1780R reference setup shown in Table 6–3 and Figure 6–4 and select channel B1 as the input.
  - b. Select the 0% flat field signal in NTSC/YC format from the TSG130A.
  - c. Set the 1780R to GND coupling and center the trace on a reference graticule.
  - d. Switch to DC coupled. Adjust R82 for a dc level of 0 V (set the blanking level to the reference graticule).
  - e. Select the 100% field signal in NTSC/YC format from the TSG130A.
  - f. Select WFM + CAL, set CAL for 100 IRE, and adjust R79 to match the top of the lower waveform with the blanking level of the upper.
  - g. Repeat these procedures as necessary to get satisfactory results.
5. Y/G channel ( $\sin(x)/x$ ) compensation – C69
  - a. Begin with the reference setup of the measurement set and select channel B1 as the input.

- b. Select the sweep (one of the diagnostic signals) from the TSG130A in NTSC/YC format.
  - c. Choose WFM + CAL at the 1780R and match the top of the lower sweep with the bottom of the upper.
  - d. Adjust C69 for as flat a frequency response as possible from the beginning of the sweep out to 5.0 MHz within 1% and to 5.5 MHz within 2%.
6. Y/G channel frequency response and 2T ringing L14, L15, L16, L17, & L18

---

**NOTE.** *The parts in this step are factory set. Do not adjust these parts unless they are out of spec.*

---

- a. Begin with the 1780R reference setup and select channel B1 as the input and external reference.
  - b. Select the sweep from the TSG130A in NTSC/YC format.
  - c. Adjust L14, L15, L16, L17, and L18 to make the frequency response as flat as possible. Use WFM + CAL to confirm that the full amplitude sweep is  $700 \pm 14 \text{ mV}_{\text{p-p}}$ , for the duration of the sweep.
  - d. Select the pulse & bar signal from the TSG130A.
  - e. Display the bottom of the 2T pulse, using horizontal magnification, to view the ringing.
  - f. Adjust L14 and L15 for symmetrical 2T ringing. Use the 1780R's voltage cursors to confirm that ringing (overshoot) is  $< 7.0 \text{ mV}$  peak.
  - g. Repeat steps b – g for best results.
7. C/B-Y/B Channel DC level and gain R63 & R60
  - a. Begin with the 1780R reference setup and display channel B2 using external reference.
  - b. Select the 100% bars signal in Y, B-Y, R-Y format from the TSG130A.
  - c. Set the 1780R to GND coupling and center the trace on a reference graticule.
  - d. Switch to DC coupled and adjust R63 for a blanking level of 0 V (set the blanking level to the reference graticule).
  - e. Select the blue field signal in GBR format from the TSG130A.

- f. Select WFM + CAL at the right display section of the 1780R, set CAL for 700 mV, and adjust R60 to match the top of the lower waveform with the blanking level of the upper.
  - g. Repeat these steps as necessary to produce satisfactory results.
- 8. C/B-Y/B channel ( $\sin(x)/x$ ) compensation – C47**
- a. Begin with the reference setup and select channel B2 as the input using external reference.
  - b. Select the sweep in the GBR format from the TSG130A.
  - c. Choose WFM + CAL at the 1780R and match the top of the lower sweep with the bottom of the upper; use the dual trace to aid adjustment.
  - d. Adjust C47 for as flat a frequency response as possible from the beginning of the sweep within 1% out to 5.0 MHz and within 2% out to 5.5 MHz.
- 9. C/B-Y/B channel frequency response and ringing L8, L9, L10, L11, & L12**

---

***NOTE.*** *The parts in this step are factory set. Do not adjust these parts unless they are out of spec.*

---

- a. Begin with the reference setup and select channel B2 using external reference.
  - b. Select the sweep in GBR format from the TSG130A.
  - c. Adjust L8, L9, L10, L11, and L12 to make the frequency response as flat as possible. Use WFM + CAL to confirm that the Sweep is 700  $\pm 14$  mV<sub>p-p</sub> for the duration of the sweep.
  - d. Select the T Pulses in GBR format from the TSG130A.
  - e. Display the bottom of the 4T Pulse, using horizontal magnification, to view the ringing.
  - f. Adjust L8 and L9 for symmetrical 4T ringing. Use the 1780R's voltage cursors to confirm that ringing (overshoot) is <7 mV peak.
  - g. Repeat these steps for the best results.
- 10. CTDM/R-Y/R channel DC level and gain – R101 & R98**
- a. Begin with the 1780R reference setup and select channel B3 as the input using external reference.
  - b. Select the 100% bars signal in GBR format from the TSG130A.

- c. Set the 1780R to GND coupling and center the trace on a reference graticule.
- d. Switch to DC coupling and adjust R101 for a blanking level of 0 V by setting the blanking level to the reference graticule.
- e. Select the red field signal in GBR format from the TSG130A.
- f. Select WFM + CAL at the right display section of the 1780R, set CAL for 700 mV, and adjust R98 to match the top of the lower waveform with the blanking level of the upper.
- g. Repeat these steps as necessary for best results.

**11. CTDM/R-Y/R channel ( $\sin(x)/x$ ) compensation – C99**

- a. Begin with the reference setup and select channel B3 as the input using external reference.
- b. Select the sweep in the GBR format from the TSG130A.
- c. Choose WFM + CAL at the 1780R and match the top of the lower sweep with the bottom of the upper; use the dual trace to aid adjustment.
- d. Adjust C99 for as flat a frequency response as possible from the beginning of the sweep out to 5.0 MHz (within 1%) and to 5.5 MHz (within 2%).

**12. CTDM/R-Y/R channel frequency response and 2T ringing L20, L21, L22, L23, L24**

---

**NOTE.** *The parts in this step are factory set. Do not adjust these parts unless they are out of spec.*

---

- a. Begin with the reference setup and select channel B3 as the input using external reference.
- b. Select the sweep in GBR format from the TSG130A.
- c. Also adjust L20, L21, L22, L23, and L24 to make the frequency response as flat as possible. Use WFM + CAL to confirm that the Sweep is  $700 \pm 14$  mV<sub>p-p</sub> for the duration of the sweep.
- d. Select the T pulses in GBR format from the TSG130A.
- e. Display the bottom of the 2T pulse, using horizontal magnification, to view the ringing.
- f. Adjust L20 and L21 for symmetrical 2T ringing. Use the 1780R's voltage cursors to confirm that ringing (overshoot) is <7 mV peak.

g. Repeat these steps for best results.

**13. Interchannel gain matching – R79, R60, R98**

- a. Begin with the reference setup of the measurement set and select B1, B2, B3 in overlay mode.
- b. Select the 100% bars signal in GBR format.
- c. Use the variable offset control to place the bottom of all of the waveforms on a convenient graticule.
- d. Set the vertical gain to X5 and display the top of the waveform.
- e. CHECK to see if all of the amplitudes are within 0.5% of each other.
- f. Adjust, if necessary, R79 for green, R60 for blue, and R98 for red to bring the amplitudes into spec.
- g. If any of the amplitudes needed to be adjusted, repeat steps 4 – 12 until these adjustments are no longer necessary.

**14. Composite blanking level and gain – R20, R18**

- a. Begin with the reference setup and select channel A as the input.
- b. Select the steps (5-step) signal in NTSC/YC format from the TSG130A.
- c. Set the 1780R to GND coupling and center the trace on a reference graticule.
- d. Switch to DC coupling and adjust R20 for a blanking level of 0 V by setting the blanking level to the reference graticule.
- e. Select WFM + CAL at the right display section of the 1780R, set CAL for 100 IRE, and adjust R18 to match the top of the lower waveform with the blanking level of the upper.
- f. Repeat these steps as necessary for best results.

**15. Composite chrominance gain – R23**

- a. Begin with the reference setup and select CH A as the input.
- b. Select the chroma noise signal from the TSG130A in NTSC/YC format.
- c. Select WFM + CAL at the right display section of the 1780R, set CAL for 100 IRE.
- d. Adjust R23 to match the bottom of the chrominance portion of the signal to blanking.

- 16. Composite ( $\sin(x)/x$ ) compensation and chroma response – C19, C21**
  - a. Begin with the reference setup and select channel A as the input.
  - b. Select the sweep in NTSC/YC format from the TSG130A.
  - c. Choose WFM + CAL at the 1780R and match the top of the lower sweep with the bottom of the upper; use the dual trace to aid adjustment.
  - d. Adjust C19 for as flat a frequency response as possible from the beginning of the sweep out to 4.2 MHz (within 2%).
  - e. Select the chroma response signal from the TSG130A.
  - f. Again, use WFM + CAL to create a dual trace to aid adjustment.
  - g. Set the WFM + CAL to 40 IRE.
  - h. Adjust C21 to match the top of the burst of the lower waveform to the bottom of the burst of the upper waveform.

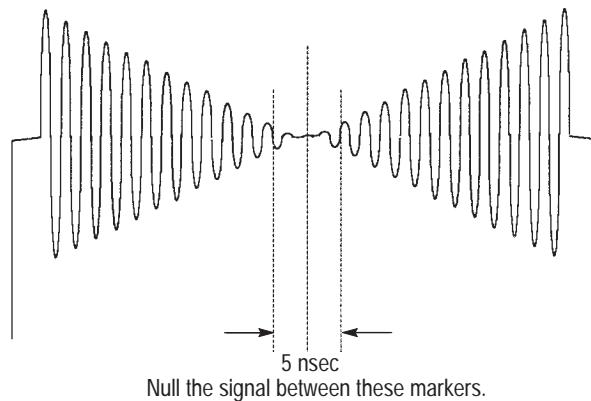

---

**NOTE.** Steps 17 – 20 are interactive. Repeat them in sequence until the best possible results are obtained. If satisfactory results cannot be achieved, repeat steps 4 – 16 before returning to this sequence.

---

**17. Inter-channel timing – C30, C32**

- a. Begin with the reference setup of the measurement set and select B1-B2 as the input.
- b. Select the bowtie signal in GBR format from the TSG130A.
- c. Adjust C30 to place the crossover point of the bowtie on the center (highest amplitude) marker.
- d. Select B1-B3 as the input.
- e. Adjust C32 to center the crossover point (see Figure 6–5).

**Figure 6-5: Bowtie crossing**

**18. Chrominance-to-luminance delay**

- a. Begin with the reference setup and select channel A as the input.
- b. Select the pulse & bar signal in NTSC/YC format from the TSG130A.
- c. Display the bottom of the 12.5T modulated pulse, using horizontal magnification to view the sine wave distortion.
- d. Use the 1780R's C-Y measurement feature to measure the chrominance-to-luminance delay. If necessary, adjust C30 for a delay of <5 ns.

**19. SC/H phase**

- a. With channel A as the input, change the 1780R REF setting to INT, and the LEFT DISPLAY to SC/H.
- b. If necessary, adjust C30 for an SC/H phase difference of <5°.

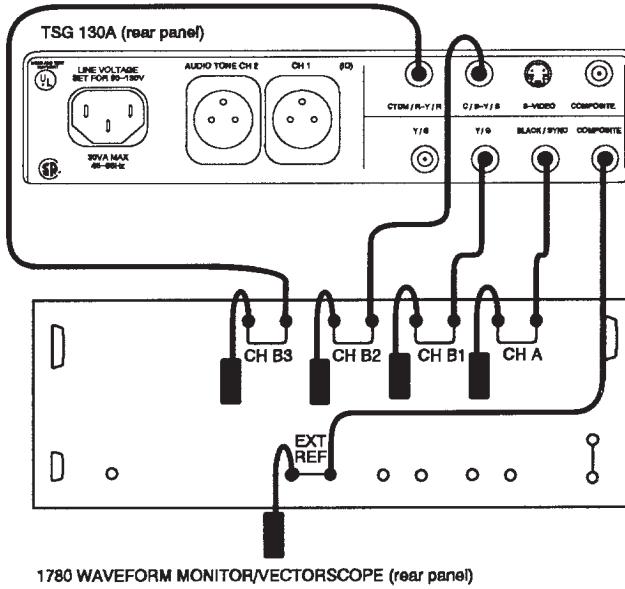

**20. Channel 1 to channel 2 timing (recheck)**

- a. Change the 1780R input to B1-B2.
- b. Select the bowtie signal from the TSG130A.
- c. If necessary, adjust C30 to bring the crossover point of the bowtie between the +5 and -5 ns markers (see Figure 6-5).

---

**NOTE.** Once adjustment has been completed, return jumper J2 to pins 1 and 2 before reinstalling the cover and placing the TSG130A in service.

---

**Figure 6-6: Setup to calibrate black burst output**

**NOTE.** The following parts adjusted in steps 21 – 23 appear only in Options: 01/02, 03, and 3J.

**21. Black burst DC level and gain – R231, R226**

- a. Begin with the 1780R setup shown in Figure 6-6 and select channel A as the input.
- b. Set the 1780R to GND coupling and center the trace on a reference graticule.
- c. Switch to DC coupled and adjust R231 so that the blanking level of the signal is on the reference graticule.
- d. Select WFM + CAL at the right display section of the 1780R, set CAL for 7.5 IRE, and adjust R226 to match the top of the lower waveform with the 0 level of the upper.
- e. Repeat these procedures as necessary to get satisfactory results.

**22. Black burst channel ( $\sin(x)/x$ ) compensation – C278**

- a. Begin with the reference setup and select channel A as the input.
- b. Select any signal in the NTSC/YC format from the TSG130A.
- c. Choose WFM + CAL at the 1780R and set it to 40 IRE.

- d. Adjust C69 to match the burst amplitude to the WFM + CAL signal.

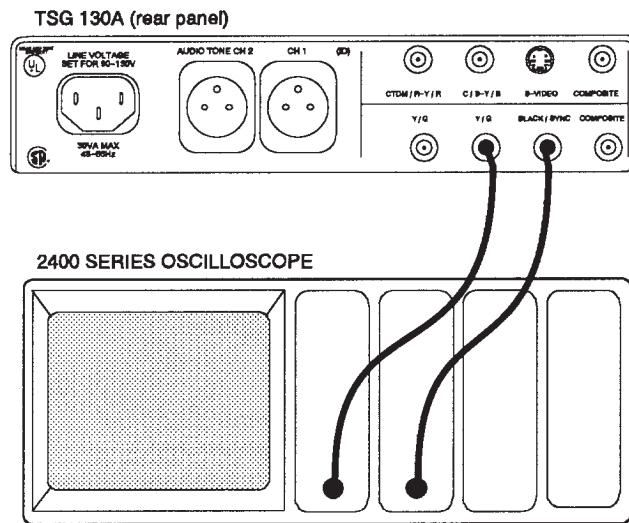

**23. Black burst inter-channel timing – L31, L32, L34, L35, L36**

---

**NOTE.** The parts in this step are factory set. Do not adjust these parts unless they are out of spec.

---

- a. Begin with the 1780R reference setup and select channel A as the input using external reference.
- b. Select the 0% flat field in NTSC/YC format from the TSG130A.
- c. Put the vectorscope in SCH mode.
- d. CHECK that the phase difference (SCH) between the black burst and the composite signal is  $<3^\circ$ .
- e. If it is  $<3^\circ$  then the adjustments are finished. If not, continue with step f.
- f. Adjust L14, L15, L16, L17, and L18 to make the phase difference (SCH)  $<3^\circ$ .

**Figure 6-7: Setup to adjust comp sync signal**

---

**NOTE.** The following parts adjusted in steps 24 – 26 are used only in Option 04.

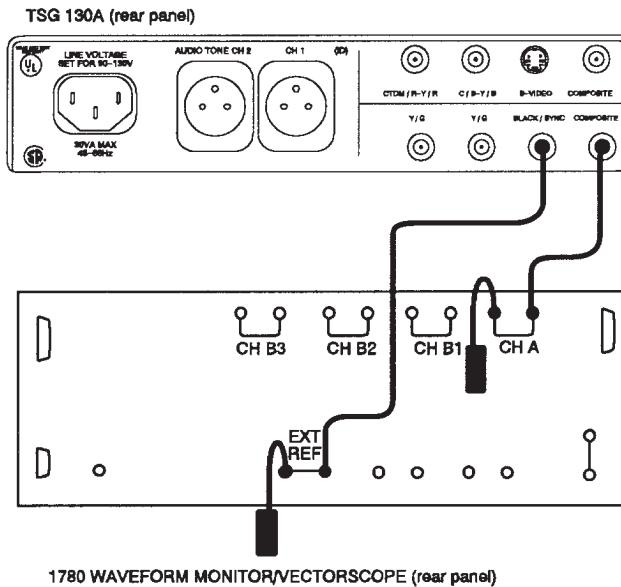

---

**24. Comp sync DC level and gain – R231, R226**

- a. Begin with the oscilloscope setup shown in Figure 6–7 and select comp sync as the input.
- b. Set the oscilloscope to GND coupling and center the trace on a reference graticule.
- c. Switch to DC coupled and adjust R231 so that the comp sync blanking level is on the reference graticule.
- d. Adjust R226 for a sync tip level of –5 V.
- e. Repeat these procedures as necessary to get satisfactory results.

**25. Comp sync channel ( $\sin(x)/x$ ) compensation – C278**

- a. Begin with the reference setup and select comp sync as the input.
- b. Adjust C69 so that the burst amplitude is 285.7 mV.

**Figure 6–8: Comp sync inter-channel timing setup**

---

**NOTE.** The parts in this step are factory set. Do not adjust these parts unless they are out of spec.

---

**26.** Comp sync interchannel timing L31, L32, L34, L35, L36

- a.** Set the equipment up as shown in Figure 6–8 and select channel A as the input using external reference.
- b.** Select the 0% flat field in NTSC/YC format from the TSG130A.
- c.** Put the vectorscope in SCH mode.
- d.** CHECK that the phase difference (SCH) between the 0% flat field and comp sync is  $<3^\circ$ .
- e.** If it is  $<3^\circ$ , adjustments are finished. If not, go to step f.
- f.** Adjust L14, L15, L16, L17, and L18 to make the phase difference (SCH)  $<3^\circ$ .

# Maintenance

# Maintenance

This section describes configuring the power supply for 220 VAC operation, removing and replacing the audio board for maintenance of the circuits below it, accessing the diagnostic signal set, and setting the internal jumpers for customized uses.

---

***WARNING.*** Dangerous voltages are present in the power supply. To ensure safety, only qualified service personnel should perform the following procedures.

---

## Selecting the Power Supply Mains Voltage

The TSG130A is shipped from the factory configured for 110 VAC, 60 Hz operation. To configure the TSG130A for 220 VAC operation, follow this procedure.

---

***WARNING.*** Dangerous voltages are present in the power supply. Remove the power cord from the electrical mains supply before attempting this procedure. Failure to remove the power cord can result in life-threatening electrical shock.

---

1. Remove the TSG130A power cord from the electrical mains supply.
2. Remove the instrument access cover.
3. Locate J122 near the AC line filter and power receptacle at the right rear of the main board.
4. For 110 VAC operation (the factory setting), the jumper should be in the 1–2–3–4 position.
5. For 220 VAC operation, the jumper should be in the 2–3–4–5 position.
6. Reinstall the instrument access cover.
7. CHECK that the fuse is the proper value. For 220 VAC operation, fuse F1 should be 0.2 Amp med blow. For 110 VAC operation the fuse should be 0.4 Amp med blow.

## Removing and Replacing the Audio Board

To remove the audio board:

1. Make sure that all connections, especially the power supply are removed from the instrument.
2. Remove the top cover. (There are 8 Pozidriv<190> screws holding the top cover to the instrument.)
3. Using Figure 7-1 as a guide, remove one screw from the audio board and four screws from the rear panel audio tone connectors (five screws).

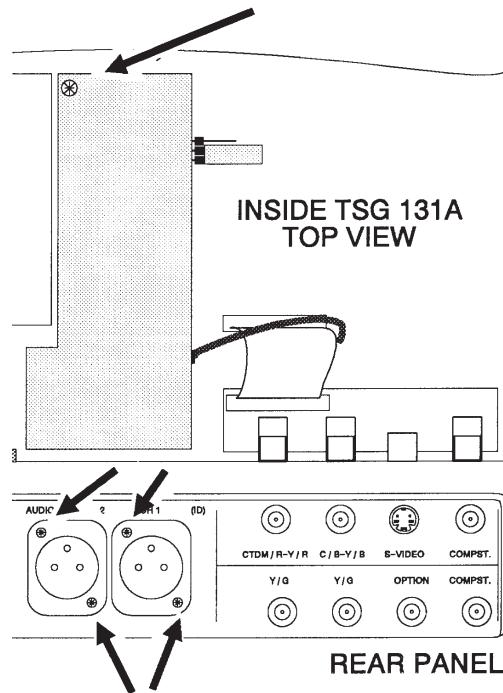

Figure 7-1: Remove 5 screws with Pozidriv screwdriver to remove audio board

4. Pull the two audio connectors straight out from the rear panel.
5. Gently, slide the audio board toward the front of the instrument until the part of the audio connectors that are soldered to the board clear the rear-panel holes.
6. Lift the board and flip it at the same time (J128, attached to the board toward the front of the instrument, forces it to flip over revealing the component side of the board).
7. The adjustments for the black burst and comp sync can now be made.

To reassemble the audio board:

1. Flip the audio board back over to face the components down.
2. Slide the audio connectors that are soldered on the board back through the rear-panel holes.
3. Slide the external audio connectors back through the rear-panel holes. The text on the audio connectors should be upside down.
4. Replace the single screw on the board.
5. Replace the four audio connector screws.
6. Replace the top cover.

## Special Diagnostic Signal Set

The TSG130A has a special set of diagnostic signals that can be accessed from the front panel. These are listed in Table 7–1.

**Table 7–1: Available diagnostic signals**

| Button      | Signal name           | Description  |
|-------------|-----------------------|--|
| Red field   | GBR matrix            | 100% color bars, 100% multiburst, Bowtie, Bowtie markers, 12.5T pulse and bar, 10 step |
| Blue field  | Component matrix      | 100% multiburst, NTC7, chroma frequency response                                       |
| Green field | GBR field square wave | Alternates black and white between fields  |

The diagnostic signals are designed for use with the VM700A. The signal matrixes, positions, and levels are all located where the VM700A expects them. Therefore, it takes no special programming to use the TSG130A as the reference signal source for the VM700A to test other equipment.

The diagnostic signals replace the signals in the second row of the front panel (red field, blue field, green field) when J2 is in the 2–3 position. No other signals are changed and the TSG130A can be left in this mode if the diagnostic signals are more useful than the standard signal set in a particular application.

When the user wants the standard signal set, return J2 to the 1–2 position.

## Setting the Internal Jumpers

Table 7–2 lists the available jumper functions that enable you to set the instrument for individual preferences.

**Table 7–2: TSG130A jumper list**

| Jumper                              |      | Position        | Function   |
|-------------------------------------|------|-----------------|--|
| Diagnostic signals                  | J2   | 1–2             | Enables standard front panel operation.                |
|                                     |      | 2–3             | Allows selection of diagnostic test signals.           |
| Black burst F1L10 reference         | J108 | 1–2             | Enables white flag on field 1 line 7                   |
|                                     |      | 2–3             | Disables white flag on field 1 line 7                  |
| GBR sync on green                   | J123 | 1–2             | Disables sync on G output                              |
|                                     |      | 2–3             | Enables sync on G output                               |
| Black burst or comp sync            | J112 | Installed       | Black burst from black/sync output                     |
|                                     | J124 | Installed       | Composite sync from black/sync output                  |
| Y/G channel test signal disable     | J7   | 1–2             | Normal   |
|                                     |      | 2–3             | Y channel output disable                               |
| C/B-Y/B channel test signal disable | J6   | 1–2             | Normal   |
|                                     |      | 2–3             | C channel disable                                      |
| R-Y/R channel test signal disable   | J8   | 1–2             | Normal   |
|                                     |      | 2–3             | R-Y channel disable                                    |
| Black burst disable                 | J111 | 1–2             | Black burst output enabled                             |
|                                     |      | 2–3             | Black burst output disabled                            |
| Audio click                         | J12  | 1–2             | Audio click enabled                                    |
|                                     |      | 2–3             | Audio click disabled                                   |
| –5 V supply disable                 | J30  | 1–2 (installed) | Service use only                                       |
| +5 V supply disable                 | J31  | 1–2 (installed) | Service use only                                       |
| Power supply voltage configuration  | J122 | 1–2–3–4         | Power supply configured for 110 V operation (standard) |
|                                     |      | 2–3–4–5         | Power supply configured for 220 V operation            |

# Replaceable Electrical Parts

# Replaceable Electrical Parts

This section contains a list of the electrical components for the TSG130A. Use this list to identify and order replacement parts.

## Parts Ordering Information

Replacement parts are available through your local Tektronix field office or representative.

Changes to Tektronix products are sometimes made to accommodate improved components as they become available and to give you the benefit of the latest improvements. Therefore, when ordering parts, it is important to include the following information in your order:

- Part number
- Instrument type or model number
- Instrument serial number
- Instrument modification number, if applicable

If you order a part that has been replaced with a different or improved part, your local Tektronix field office or representative will contact you concerning any change in part number.

Change information, if any, is located at the rear of this manual.

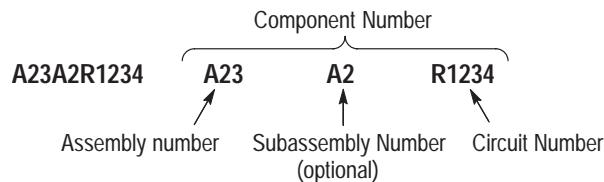

## Using the Replaceable Electrical Parts List

The tabular information in the Replaceable Electrical Parts List is arranged for quick retrieval. Understanding the structure and features of the list will help you find all of the information you need for ordering replacement parts. The following table describes each column of the electrical parts list.

**Parts list column descriptions**

| Column  | Column name           | Description  |
|---------|-----------------------|--|
| 1       | Component number      | The component number appears on diagrams and circuit board illustrations, located in the diagrams section. Assembly numbers are clearly marked on each diagram and circuit board illustration in the <i>Diagrams</i> section, and on the mechanical exploded views in the <i>Replaceable Mechanical Parts</i> list section. The component number is obtained by adding the assembly number prefix to the circuit number (see Component Number illustration following this table).<br><br>The electrical parts list is arranged by assemblies in numerical sequence (A1, with its subassemblies and parts, precedes A2, with its subassemblies and parts).<br><br>Chassis-mounted parts have no assembly number prefix, and they are located at the end of the electrical parts list. |
| 2       | Tektronix part number | Use this part number when ordering replacement parts from Tektronix.   |
| 3 and 4 | Serial number         | Column three indicates the serial number at which the part was first effective. Column four indicates the serial number at which the part was discontinued. No entry indicates the part is good for all serial numbers.  |
| 5       | Name & description    | An item name is separated from the description by a colon (:). Because of space limitations, an item name may sometimes appear as incomplete. Use the U.S. Federal Catalog handbook H6-1 for further item name identification.   |
| 6       | Mfr. code             | This indicates the code number of the actual manufacturer of the part.   |
| 7       | Mfr. part number      | This indicates the actual manufacturer's or vendor's part number.  |

**Abbreviations** Abbreviations conform to American National Standard ANSI Y1.1–1972.

**Component Number**

**Read:** Resistor 1234 (of Subassembly 2) of Assembly 23

**List of Assemblies**

A list of assemblies is located at the beginning of the electrical parts list. The assemblies are listed in numerical order. When a part's complete component number is known, this list will identify the assembly in which the part is located.

**Chassis Parts**

Chassis-mounted parts and cable assemblies are located at the end of the Replaceable Electrical Parts List.

**Mfr. Code to Manufacturer Cross Index**

The table titled Manufacturers Cross Index shows codes, names, and addresses of manufacturers or vendors of components listed in the parts list.

**Manufacturers cross index**

| Mfr. code | Manufacturer  | Address                                 | City, state, zip code        |

## Symbols

Graphic symbols and class designation letters are based on ANSI Standard Y32.2-1975.

Logic symbology is based on ANSI Y32.14-1973 in terms of positive logic. Logic symbols depict the logic function performed and may differ from the manufacturer's data.

Ovepline, parenthesis, or leading slash indicate a low asserting state.

Example:  $\overline{ID\ CONTROL}$ , ( $ID\ CONTROL$ ), or / $ID\ CONTROL$ .

Abbreviations are based on ANSI Y1.1-1972.

Other ANSI standards that are used in the preparation of diagrams by Tektronix, Inc. are:

Y14.15, 1966 -- Drafting Practices.

Y14.2, 1973 -- Line Conventions and Lettering.

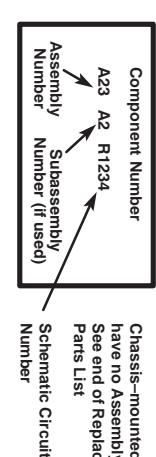

Y10.5, 1968 -- Letter Symbols for Quantities Used in Electrical Science and Electrical Engineering.

American National Standard Institute  
1430 Broadway, New York, New York 10018

## Grid Coordinates

The schematic diagram and circuit board component location illustration have grids. A lookup table with the grid coordinates is provided for ease of locating the component. Only the components illustrated on the facing diagram are listed in the lookup table.

When more than one schematic diagram is used to illustrate the circuitry on a circuit board, the circuit board illustration will only appear opposite the first diagram; the lookup table will list the diagram number of other diagrams that the other circuitry appears on.

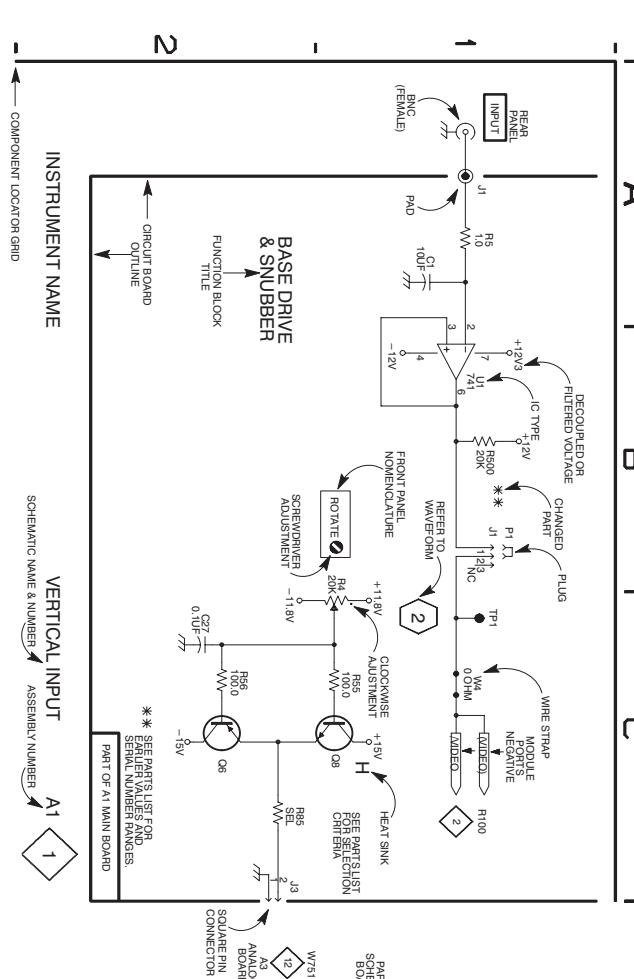

**FRONT PANEL NOMENCLATURE**

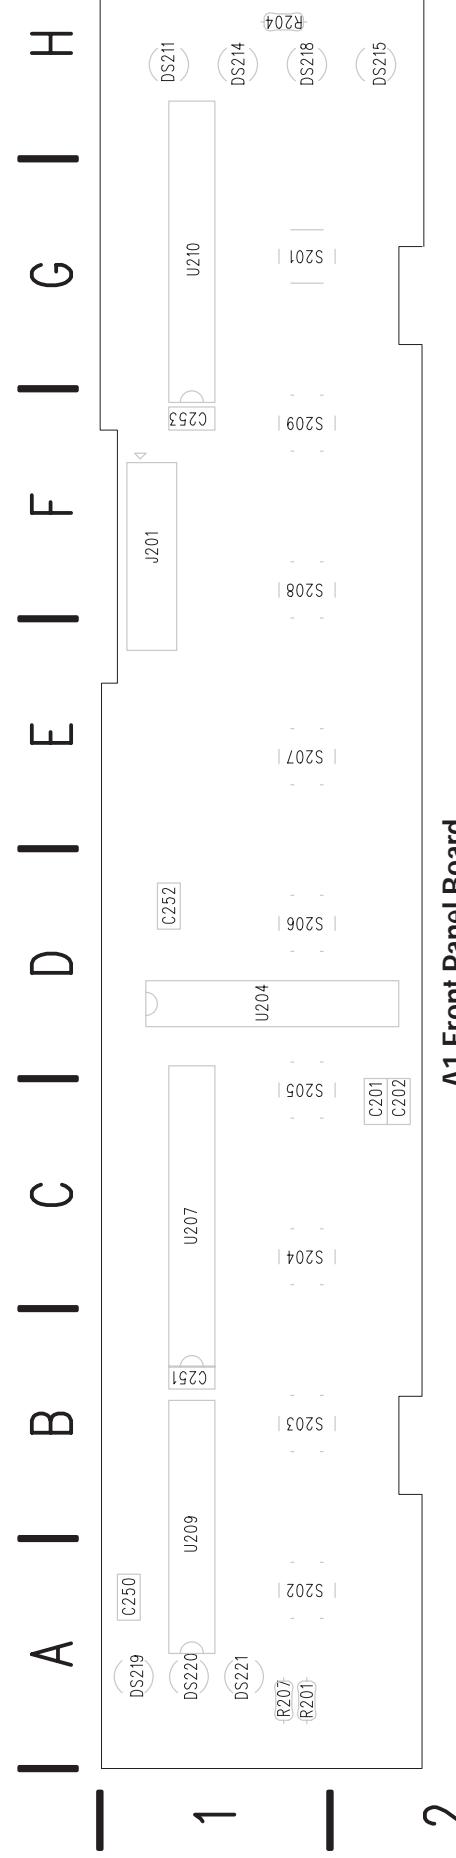

| Component Values   | Electrical components shown on the diagrams are in the following units unless noted otherwise: |
|--|--|
| Capacitors:  | Values one or greater are in picofarads (pF).  |
| Resistors = Ohms ( $\Omega$ ):   | Values less than one are in microfarads ( $\mu F$ ).   |
| The following information and special symbols may appear in this manual. |  |

## Assembly Numbers

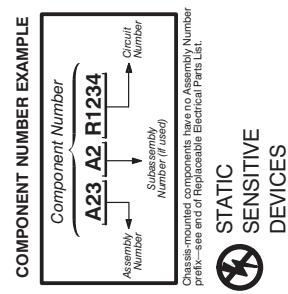

Each assembly in the instrument is assigned an assembly number (e.g., A20). The assembly number appears on the diagram (in circuit board outline), circuit board illustration title, and lookup table for the schematic diagram.

The Replaceable Electrical Parts List is arranged by assembly number in numerical sequence; the components are listed by component number. Example:

**A1 Front Panel Board**

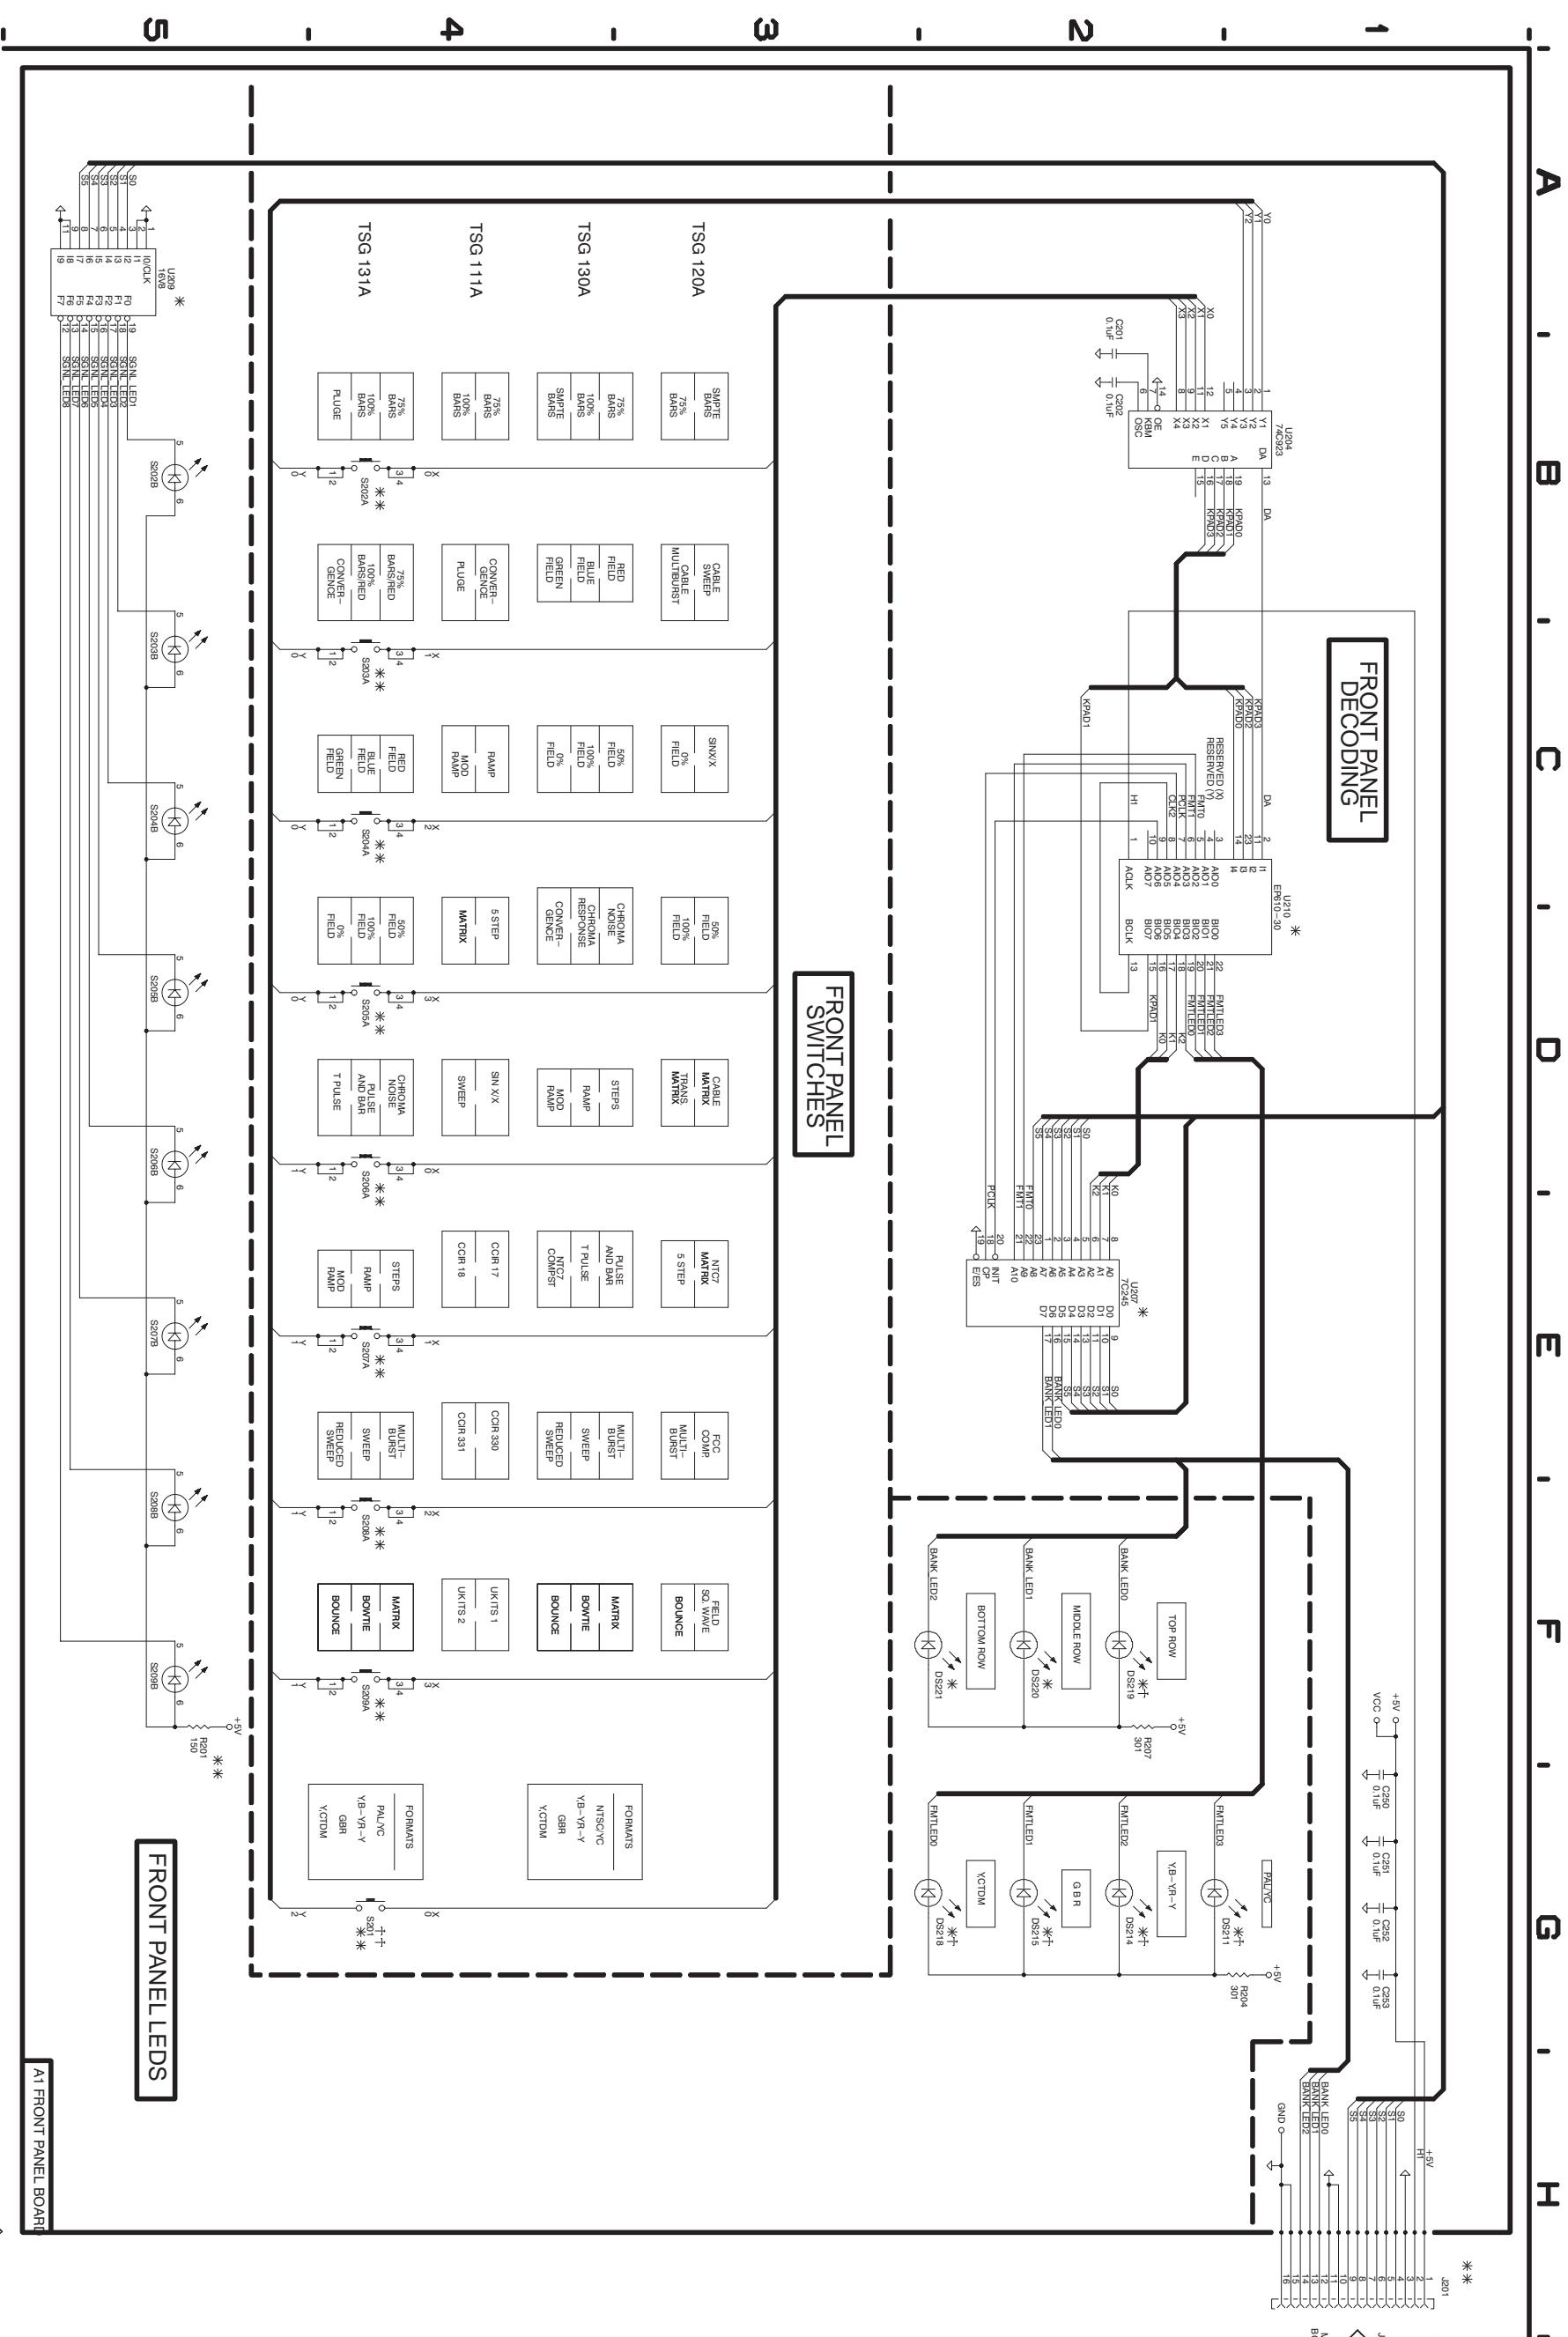

**SCHEMATIC DIAGRAM < 1 >  
FRONT PANEL BOARD**

The schematic diagram and circuit board illustration has an alphanumeric grid to assist in locating parts within that diagram or board.

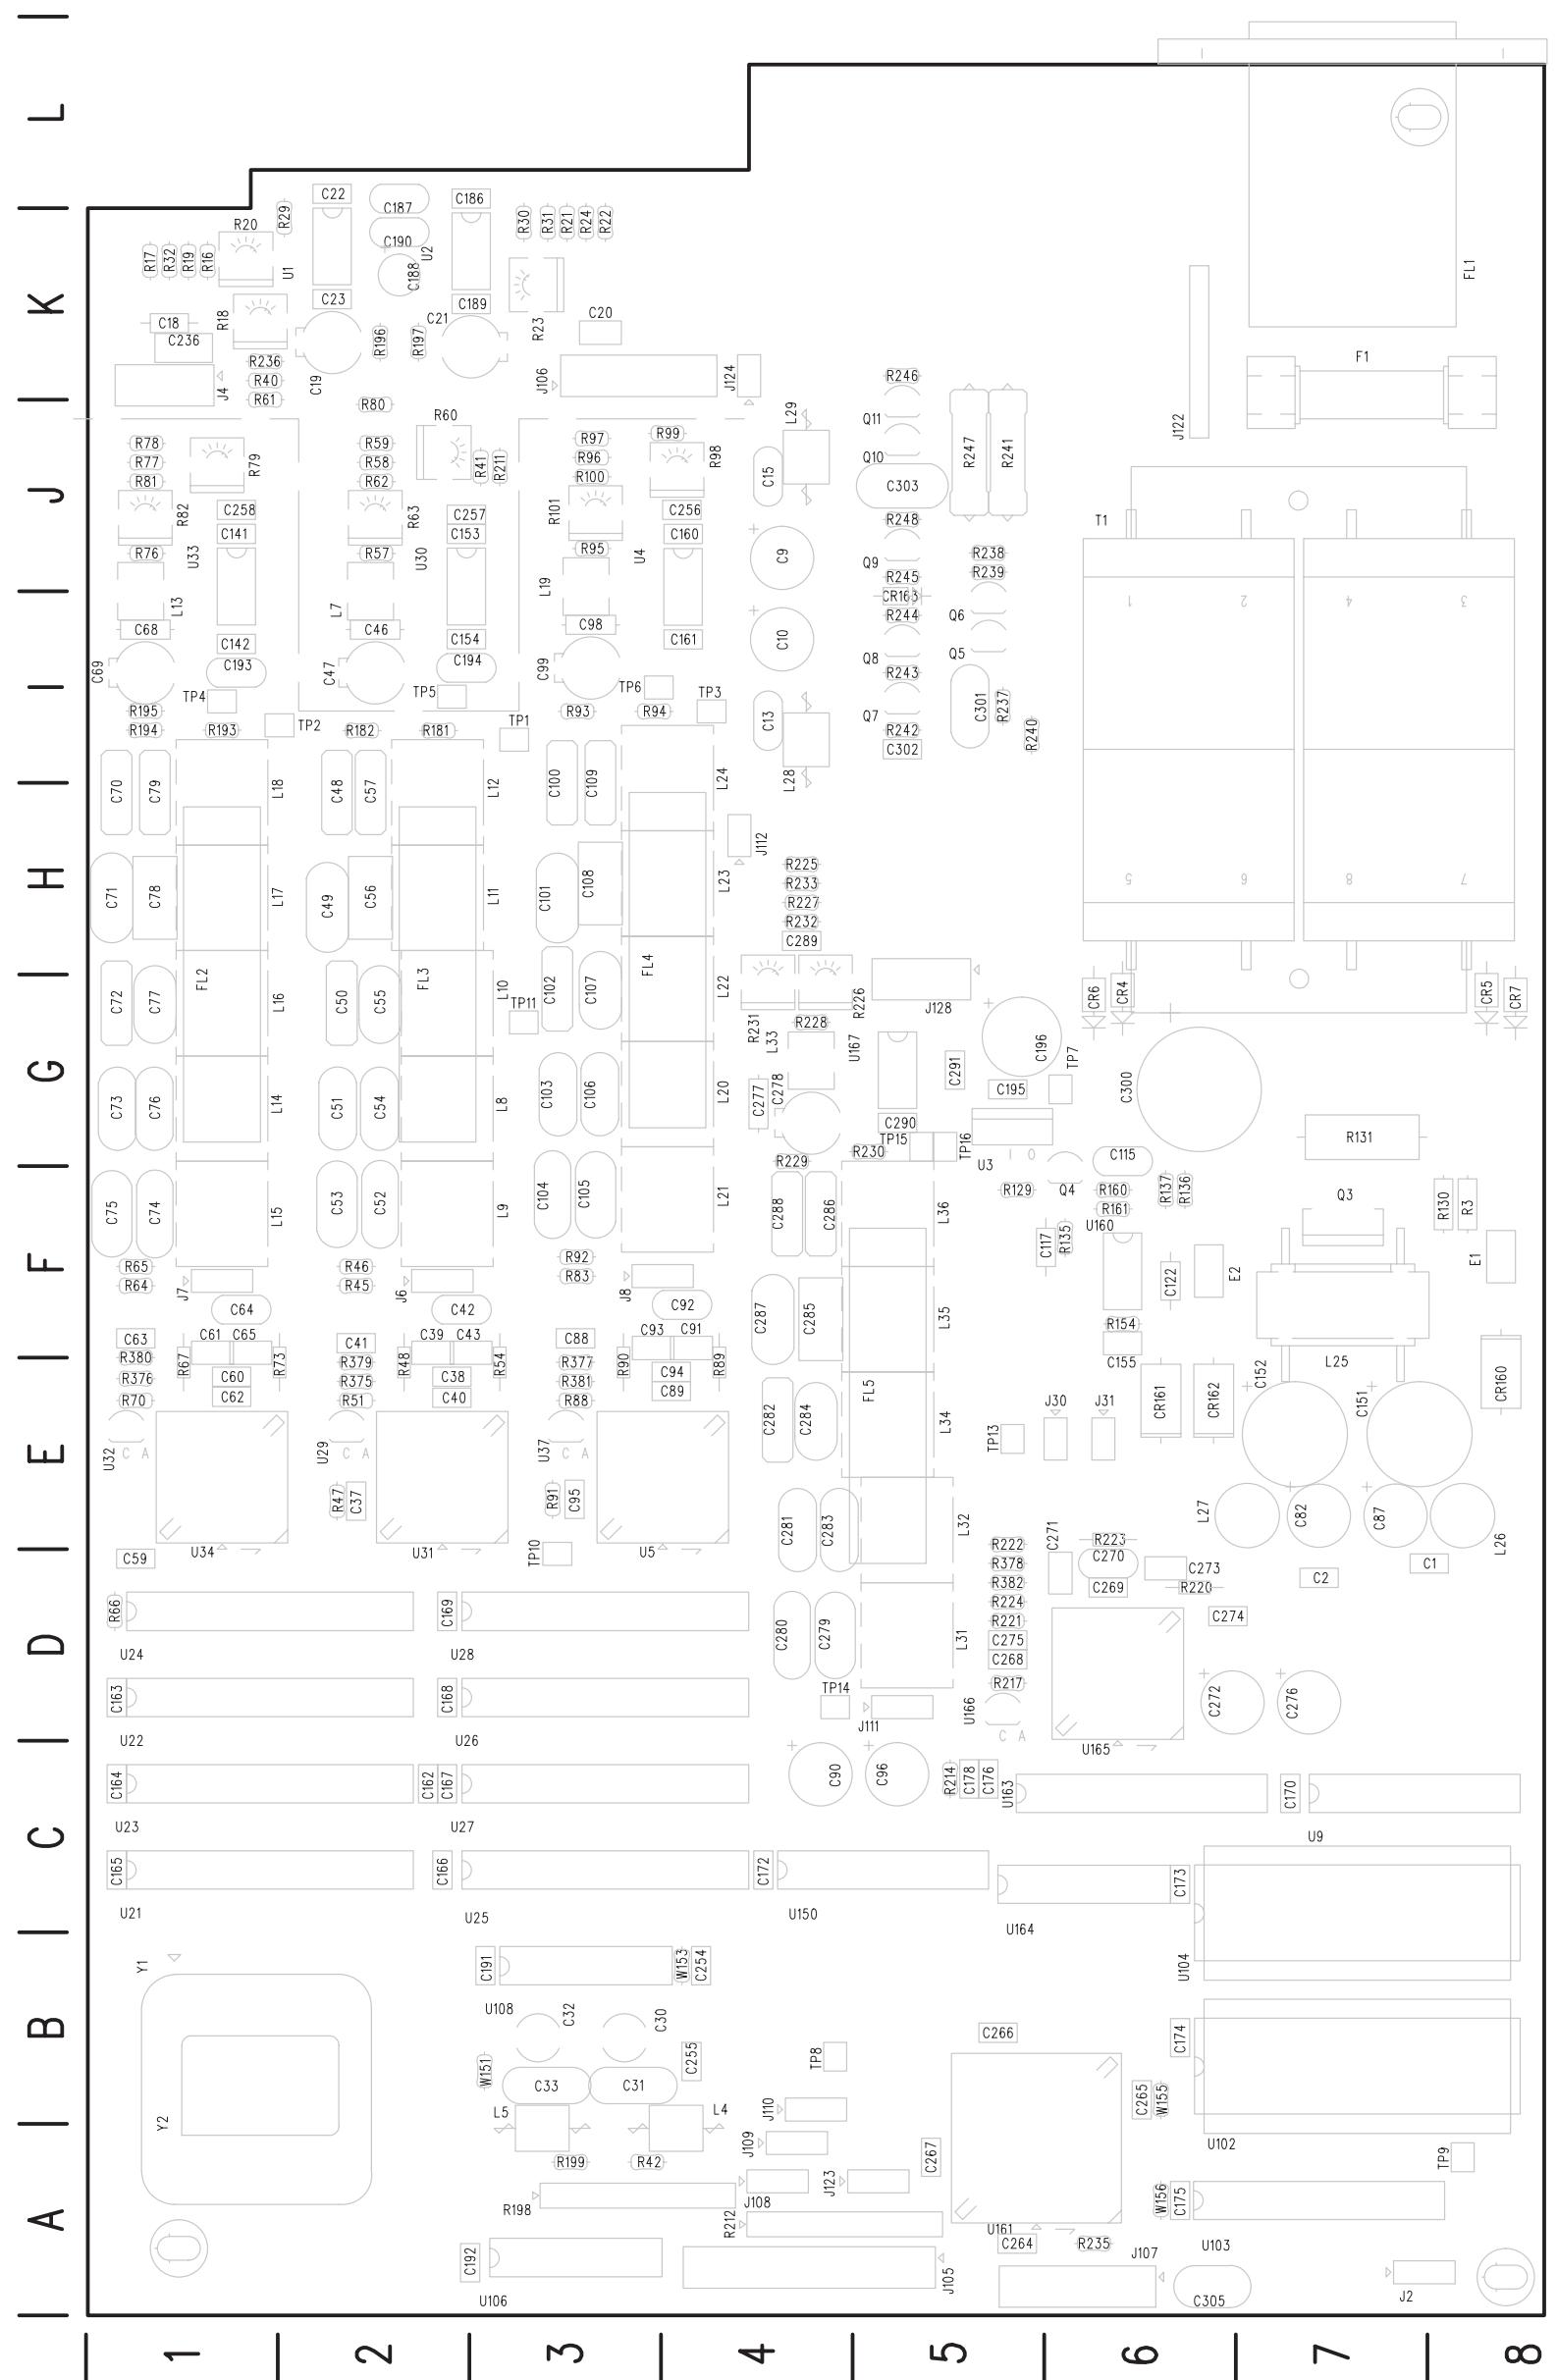

**ASSEMBLY A1.**

| CIRCUIT NUMBER | SCHEMATIC LOCATION | BOARD LOCATION | CIRCUIT NUMBER | SCHEMATIC LOCATION | BOARD LOCATION |
|----------------|--------------------|----------------|----------------|--------------------|----------------|

TSG130A Instruction Manual

**NOTE:**  See Parts List for Part Number & Serial Number Range  
**\*** Indicates the IC is in a socket or LED is mounted with hold-down  
**†** LEDs not loaded in TSG 111A or TSG 120A  
**††** Switch not loaded in TSG 111A or TSG 120A

# Replaceable Mechanical Parts

# Replaceable Mechanical Parts

This section contains a list of the replaceable mechanical components for the TSG 130A. Use this list to identify and order replacement parts.

## Parts Ordering Information

Replacement parts are available through your local Tektronix field office or representative.

Changes to Tektronix products are sometimes made to accommodate improved components as they become available and to give you the benefit of the latest improvements. Therefore, when ordering parts, it is important to include the following information in your order:

- Part number
- Instrument type or model number
- Instrument serial number
- Instrument modification number, if applicable

If you order a part that has been replaced with a different or improved part, your local Tektronix field office or representative will contact you concerning any change in part number.

## Using the Replaceable Mechanical Parts List

The tabular information in the Replaceable Mechanical Parts List is arranged for quick retrieval. Understanding the structure and features of the list will help you find all of the information you need for ordering replacement parts. The following table describes the content of each column in the parts list.

**Parts list column descriptions**

| Column  | Column name           | Description  |
|---------|-----------------------|--|
| 1       | Figure & index number | Items in this section are referenced by figure and index numbers to the exploded view illustrations that follow.   |
| 2       | Tektronix part number | Use this part number when ordering replacement parts from Tektronix.   |
| 3 and 4 | Serial number         | Column three indicates the serial number at which the part was first effective. Column four indicates the serial number at which the part was discontinued. No entry indicates the part is good for all serial numbers.        |
| 5       | Qty                   | This indicates the quantity of parts used.   |
| 6       | Name & description    | An item name is separated from the description by a colon (:). Because of space limitations, an item name may sometimes appear as incomplete. Use the U.S. Federal Catalog handbook H6-1 for further item name identification. |
| 7       | Mfr. code             | This indicates the code of the actual manufacturer of the part.  |
| 8       | Mfr. part number      | This indicates the actual manufacturer's or vendor's part number.  |

**Abbreviations** Abbreviations conform to American National Standard ANSI Y1.1–1972.

**Chassis Parts** Chassis-mounted parts and cable assemblies are located at the end of the Replaceable Electrical Parts List.

**Mfr. Code to Manufacturer Cross Index** The table titled Manufacturers Cross Index shows codes, names, and addresses of manufacturers or vendors of components listed in the parts list.

**Manufacturers cross index**
