

# Ki Pro Rack Release Notes - v6.5

## Firmware update for Ki Pro Rack

### Introduction

---

This firmware update provides improvements for Ki Pro Rack. Be sure to consult the Installation and Operation Guide (user manual) for detailed information about features and configuration guidelines. The most current documentation can always be found in the Support section of [www.aja.com](http://www.aja.com).

### Improvements and Enhancements

---

- Audio Channels selection now includes a 4-Channel option in addition to 2-Channel and 8-Channel options.
- Gang control is now supported across Ki Pro Rack and Ki Pro Ultra, allowing a combination of Ki Pro devices to be controlled.
- WebUI has been updated to include all WebUI controllable AJA products in the right hand discovery window.
- DNxHD formats have been renamed to the following:
  - DNx HQX/220x
  - DNx SQ/145
  - DNx LB/36

### Firmware Update Considerations

---

- AJA recommends a Factory Reset under the CONFIG menu prior to updating firmware.
- After a firmware update, the web browser (Safari, Firefox, etc.) may lose its connection. A refresh of the web browser will reconnect the web UI.

- Some clips created by Ki Pro Rack may cause Final Cut Pro 7 to bring up a "not optimized" prompt when imported. These clips are valid and can be used within Final Cut Pro 7.
- Do not attempt firmware updates while recording is in progress. Be sure the device is in the stopped state before performing a firmware update.

## Technical Support

---

AJA Technical Support is free and available to help you answer questions or resolve issues with any of your AJA products.
