## LEGAL NOTICE

Please note that the present product is supplied by EVS Broadcast Equipment SA or any other relevant entity of the EVS Group ("EVS") and is subject to EVS Software License Agreement (available on [https://evs.com/sites/default/files/Software\\_License\\_Agreement.pdf](https://evs.com/sites/default/files/Software_License_Agreement.pdf) or upon request) along with any applicable additional terms or policies.

By installing, copying, or otherwise using the present product, you agree to be bound by the above-mentioned terms.

## INTRODUCTION

All EVS products have the same need of infrastructure tools. They must all manage licenses, maintenance, user-right, monitoring, user-manual, deployment, etc. And so EVS decided to create a **VIA platform** to centralize all these use-cases in one common solution/platform to ease customers to manage their setups. The first use-case which has been selected for this first released version of Via Platform is the Licensing Management.

## NEW FEATURES

The VIA Platform is a web application installed on a customer setup allowing to expose multiple tools to manage EVS products. The first tool integrated in VIA Platform 1.0 is the VIA Licensing Manager.

### IN 1.0.3

- > Via Licensing Management: Manage your Via Licenses of your entire network from a single user interface.
  - Web interface
  - Server auto discovered or manually added
  - Get locking code for each connected server
  - Display and manage licenses (import, delete) on servers
  - Security: local or LDAP user authentication, HTTPS

## COMPATIBILITY
