

## Router Controllers & Panels Features List – January 2014

### Nucleus2 (2463), Nucleus (2450) and Nebula controllers, plus Legacy and RollCall Mode Panel Features

Nebula	244x	fitted in all Halo, Freeway and Sirius 600 routers, plus early Cygnus and Pyxis to approx 2009
Nucleus	2450	fitted in Pyxis and Cygnus routers, and Sirius 800 routers with video only (up to May 2013)
Nucleus2	2463	fitted in Sirius 800 routers with Audio routing or Advanced Hybrid Processing (AHP) modules, and all Sirius 800 from May 2013.

The features listed below are a quick guide to the different functionality available on each controller. Note that some features are dependent on the router type.

	<b>Nucleus2 - 2463</b>	<b>Nucleus - 2450</b>	<b>Nebula</b>
Configuration	Workbench is used for configuration. Ethernet connection to PC	Workbench is used for configuration. Ethernet connection to PC	Dedicated Nebula editor software. Serial RS232 connection to editor PC
<b>Controller Configuration Features</b>			
*1 = Legacy Panel Mode Only			
Logical to Physical Source & Destination Mapping	Allows source and destinations addressed by external controllers to be mapped to different physical sources and destinations on the frame.	Allows source and destinations addressed by external controllers to be mapped to different physical sources and destinations on the frame.	No logical mapping available
Level mapping (source and destination offset)	Not available (logical mapping replaces this)	Not available (logical mapping replaces this)	Yes
Source / Destination numbering and expansion	Non-contiguous source and destination numbering on one level. Allows easier expansion without moving existing modules using the mapping capabilities	Non-contiguous source and destination numbering on one level. Allows easier expansion without moving existing modules using the mapping capabilities	All sources and destinations for one level must be in a block, sequentially numbered
Number of Matrices	8 (recommended that external controllers are used above 2 Matrices) <sup>*1</sup>	1 <sup>*1</sup>	1 <sup>*1</sup>
Number of controllable levels	Unlimited – see condition below <sup>*1</sup>	Unlimited – see condition below <sup>*1</sup>	8 maximum <sup>*1</sup>
Level sizes	Maximum video level size 1152x1432 Maximum audio level size 18,432 x 18,432	There is a limit for the physical port mapping of a total of 2208 input ports and 2208 output ports when using the router expansion bus. The first level is mapped as 576x576 (even on a 17x17 Pyxis), subsequent levels occupy an additional 544 input ports and 544 output ports. Contact UK support for valid combinations and guidance. This results in a current maximum of 4 complete levels. Expansion using serial ports does not have this limitation. Router levels can be configured to any size within the protocol limits when slaved via SW-P-02 or SW-P-08 out.	Level sizes increment in 8s or 16s determined by switches on the router. Maximum size 576 x 576

Expansion / Slaving	<p>Commands received via any IN protocol can control all frames and levels of a multi level system. This uses serial or IP connections to slaved routers (e.g. S800 to Pyxis). This does not include audio modify commands – these are not supported on 2463 controllers.</p> <p>S800 frames do not have an RJ45 expansion output, so slaving via the internal bus is not possible but other routers can be slaved via serial/IP connections.</p> <p>Cygnus and Pyxis routers are not currently supported using this controller.</p>	<p>Commands received via SW-P-02 can control up to 4 levels on a multi level system if levels are slaved using the RJ45 expansion link (e.g. Pyxis to Pyxis). i.e. local bus control</p> <p>Commands received via SW-P-02 cannot control any router slaved using any serial protocol (e.g. SW-P-02 / SW-P-08) out (e.g. a Freeway slaved from a Pyxis).</p> <p>Commands (incl. audio modify) via SW-P-08, GVG ES-Control, Barco Rosa and Harris Passthrough in can control all frames and levels of a multi level system. This applies to slaving using the RJ45 expansion (Pyxis to Pyxis) or SW-P-02 out on RS422 (e.g. Pyxis to Freeway).</p> <p>Cygnus and S800 frames do not have an RJ45 expansion output, so slaving via the internal bus is not possible but other routers can be slaved via serial connections</p>	<p>Serial control of the master router uses SW-P-02 or SW-P-08 in.</p> <p>Expansion to slave router frames is via P-Bus (37 way D type cable) on Sirius 600, Freeway, Halo, &amp; Axis.</p> <p>Where the routers are &lt;128 Inputs or outputs the position of the master router does not matter. However, when &gt;128 the master router must be the largest router (e.g. you can slave a Halo from a Sirius 600, but cannot slave a Sirius 600 from a Halo)</p>
Audio capability	<p>Mono, Stereo or Dolby 'grouped' routing on a per channel basis.</p> <p>Sirius 800 only - Mono split, Left→ both, right→ both, combine</p> <p>Sirius 800 only - Routing between mono, stereo and Dolby types possible based on priority set in the Workbench configuration</p>	<p>Mono, Stereo or Dolby 'grouped' routing on a per channel basis.</p> <p>Mono split, Left→ both, right→ both, combine</p> <p>Routing between mono, stereo and Dolby types possible based on fixed rules</p>	All routing assumed stereo. Mono split, Left→ both, right→ both, combine available
<b>Control Ports &amp; References</b>			
Serial Ports	4 RS485 serial ports (Sirius 800)	Up to 4 RS485 serial ports (dependent on the router capability) RS232 port for debug only	2 x RS485 serial ports, 1 x RS232 port available for router control
Ethernet	One per controller, 10/100Base-T	One per controller, 10/100Base-T	One per controller, 10/100Base-T
Video References	Up to 4 video references (all multi standard) Internally derived references of any format can be set up from any physical reference (e.g. 625 Black & Burst can be used to derive 1080i/50 and 720p/50 internally).	Up to 4 video references (all multi standard)	Up to 2 x 525/625 references and 1 x HD tri-level reference
Audio references	1 x AES	1 x AES	1 x AES, 32-48kHz

Protocols Supported			
<b>NOTE - Protocols &amp; Serial Ports</b>		Each serial port on Nucleus and Nucleus2 controllers can be independently assigned as any protocol listed below. There are no restrictions on the combination of protocols.	
Web	RollCall Java app – XY routing control (single matrix, single level only), processing control, controller software updates (from 3.14.2)	RollCall Java app – XY routing control (single matrix, single level only), processing control, controller software updates (from 3.14.2)	Serial ports on Nebula controllers have limitations on the number and combination of serial & Ethernet ports and protocols. Refer to <a href="#">Nebula Controller Sales Information</a> on the Intranet
SW-P-02 in (serial)	Yes	Yes	Yes – controlled device only
SW-P-02 out (serial)	Yes – to control a slaved Router (e.g. slaving a Pyxis from an S800) <i>NOTE - see 'Expansion / Slaving' section above for restrictions on slaving.</i>	Yes – to control a slaved Router (e.g. slaving a Halo from a Pyxis) <i>NOTE - see 'Expansion / Slaving' section above for restrictions on slaving.</i>	No
SW-P-02 in (IP)	Yes (maximum 16 connections in)	Yes (maximum 16 connections in)	Yes (maximum 8 connections in) On Halo, reduces the number of serial ports to 1
SW-P-02 Out (IP)	Yes – to control slaved routers as a second level (also supports dual controllers in slaved routers)	No	No
SW-P-02 Time stamped commands in	No	Yes – for set crosspoint only	No
Group Salvos	From SW-P-02 From SW-P-08	No Max 128 Max 128	Max 32 active of 128 Max 32 active of 128
SW-P-08 In (serial)	Yes	Yes	Yes
SW-P-08 Out (Serial)	Yes	Yes	No
SW-P-08 in Over IP	Yes	No	No
SW-P-08 Out Over IP	No	No	No
RollCall	Yes	Yes	No
SNMP control	Routing (including monitoring outputs)	SNMP available from 1.1.7 onwards	For basic routing. On Halo, SNMP reduces the number of serial ports to 1.
SNMP Monitoring	PSU, fan, controller, fault, module present, signal present (S800), names, protect state. Ability to chose groupings of status to report so not all status is sent if it isn't wanted	SNMP available from 1.1.7 onwards PSU and fan status for S800 from 1.1.9 Ability to chose groupings of status to report so not all status is sent if it isn't wanted	SNMP status and alarms for PSUs and controllers. On Halo, SNMP reduces the number of serial ports to 1.
Tandberg Gen. Switcher	No	No	Yes - Over RS485 and IP
Barco Rosa (Harmonic)	No	Yes	Yes
Sandar Prosan	No	No	Yes
Sony S-Bus	No	No	Yes (IP)
GVG ES-Control IN	No	Yes	No
GVG ES-Switch	No	No	No
Harris Passthrough	Yes	Yes	Yes
Harris Passthrough over IP (Telnet)	Yes - Special for Ericsson. Harris do not support Passthrough over IP	No	No
DCCP OUT (IP)	Yes	No	No
ETL Matrix OUT (Serial)	Yes	No	No
Kramer OUT (Serial)	Yes	No	No

Control Panels

3.14.12	2.0.18.4710	1.3.11.4710	19 Dec 2013
3.15.2	3.0.2.4761	3.0.2.4761	16 Dec 2013

For Workbench versions up to and including V1.1.13, controller code and Workbench code MUST be in step (i.e. from the same rows grouped in the table opposite). Earlier or later versions of workbench cannot be used to configure controllers.

Workbench 3.12 and 3.13 can both be used to configure both Nucleus V1.1.xx and V1.2.xx
