### DESCRIPTION

Software version 3.00 is available.

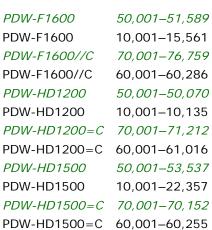

### **NOTE:**

- This upgrade applies to units with package V2.04 or earlier.
- If you are currently using software V1.13 or earlier, upgrade to V1.20 before you upgrade to V3.00. Refer to technical bulletin 20-2009-032.
- DO NOT downgrade from V3.00; otherwise the recorder will not start.
- When using an FTP connection with Xpri equipment, the LIST command for the file on the top folder will not function.

When using an FTP or CIFS connection with equipment other than Xpri, the recorder may not function, depending on how the LIST command is used.

In either case above, use a software version earlier than V3.00 until the error is corrected in a future software update.

Italicized information in green applies to customers outside the United States.

### **PROGRAM IMPROVEMENTS**

- Discs that can be replayed with XDS series models no longer fail to be replayed with PDW-HD1200/HD1500/F1600 on rare occasions.
- The Exchg.batt! alarm no longer appears immediately after power-ON.
- When a triple- or quadruple-layered disc is auto-ejected, the STOP lamp no longer blinks.
- When video insert editing is executed, TC can now be output properly to HD-SDI (PDW-F1600).

#### **UPGRADE PROCEDURE**

### **NOTE:**

- When upgrading from V1.13, software must be upgraded to V1.20 or higher first before upgrading to V3.00.
- The software file to be installed differs, depending on the HPR board installed: HPR-23/45 or HPR-47.

To confirm the HPR board installed, go to Maintenance menu M30 or Status > Software Version on the XDCAM website.

HPR-47 board HPR: 4.7x HPR-23/45 board

HPR: 2.3x (or no version indicated)

HPR is not displayed when software is V1.92 or earlier.

## **System Requirements**

• When HPR-23/45 is installed, use the following V3.00 package software:
