

Version Software Update Procedure

View the unit's version information and perform software updates.

Viewing Version Information

You can view the unit's system version, serial number, and unique ID in the [System Setup] menu > [About Anycast] > [Information]. You can view detailed version information by tapping [Detail Version].

Updating the Software

You can find information on version updates at the web portal of each dealer.

You can also access the information from the following URL:

<https://www.servicesplus.sel.sony.com/sony-software.aspx>

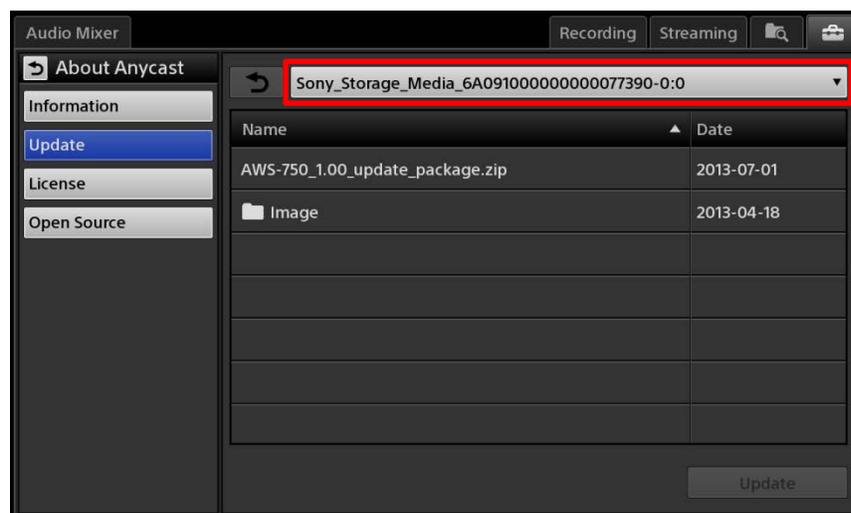

NOTES:

- The updating procedure cannot be canceled once started.
- When update is complete, the unit shuts down automatically. Perform updates when shutdown is not a concern.

1. Save the update package, AWS-750_2.XX_update_package.zip, to an external drive, and connect the drive to a USB port on the right side of the unit.
2. Display the [About Anycast] screen of the [System Setup] menu, and tap [Update] in the menu to the left.

The [Update] screen appears.

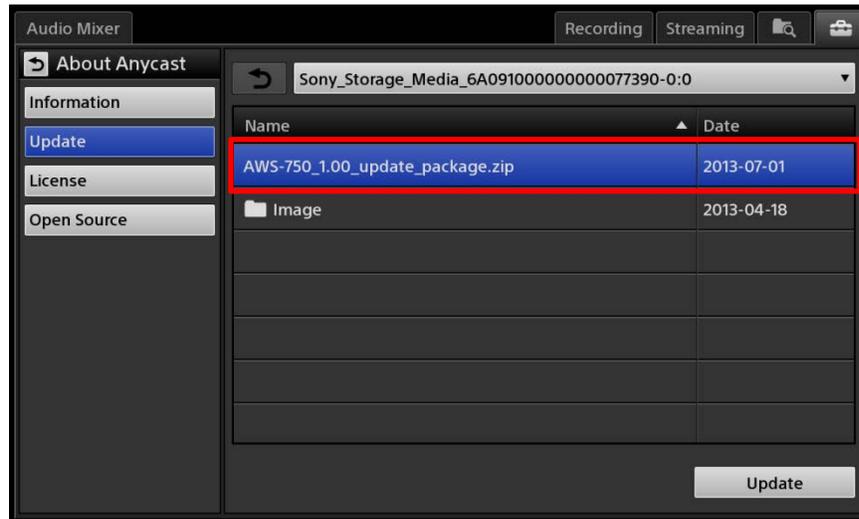

3. Select the external drive on which the update package is stored.

When you select the external drive, the files stored on the drive are displayed.

NOTE: Do NOT change the name of the update package; it will not appear in the list if you do.

4. Select the file, and tap [Update].

The currently installed version and the version of the update package are displayed.

5. Check the versions, and tap [Yes] when you are ready to install.

Installation starts.

When installation is complete, a message appears.

6. Tap [OK].

The unit shuts down.

7. Remove the external drive.
